SR 99 Tunnel Project

Keeping waterfront traffic moving during SR 99 tunnel construction

Crews clearing space for tunnel construction are preparing to reroute six blocks of waterfront traffic from Alaskan Way to a newly improved road beneath the viaduct. The traffic switch – which will happen during the second week in May and last through at least early 2014 – will change ferry access as well as parking and traffic patterns along the waterfront south of Spring Street. Our ferry access video shows how drivers will get to Colman Dock after the changes take effect.
