39 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
40
41 *Id.* at 127:10-128:24.

42
43 70. It also bears noting that any “internal review” of the special benefit estimates
44
45 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
46
47 error. Indeed, given all the same information, he seemed to suggest that it would be

1 perfectly reasonable for another experienced appraiser to come up with special benefit
2 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
3
4 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
5 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
6
7 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
8
9 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
10
11 margin of error (5%) is a "rule of thumb" and not a "hard legal standard," there are still
12
13 reasonable and unreasonable variations within the appraisal field. *See Examiner's*
14
15 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
16
17 special because it is arbitrarily assigned; and it is too small to realistically be supported by
18
19 appraisal techniques.
20
21

22 71. No evidence of special benefit. Meanwhile, there is "no actual evidence from
23 any seller or purchaser that the price was higher because of the LID improvements."
24
25 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser "has not
26
27 identified any seller or buyer, or any particular property where the existence of the LID
28
29 improvements had an effect on the market price." *Id.* at 410-11. Meanwhile, Taxpayer has
30
31 explained that the property has not increased rental rates or revenue due to the forthcoming
32
33 LID Improvements, because, among other reasons (and apart from COVID), the
34
35 improvements ABS believes will generate value do not exist and will not for a number of
36
37 years to come. There are no comparable sales because the LID Improvements are not in
38
39 place, nor will they be until the end of 2024 if completed on schedule.
40
41

42 72. The fair market value of Harbor Steps' property has not changed due to
43 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
44
45 benefited from installation of new water main and fire hydrant where it was already
46
47

1 adequately supplied with water and afforded adequate fire protection). And in any event,
2
3 any value attributable to removal of the viaduct was to be excluded from the assessment
4
5 calculation.

6
7 73. There is no special benefit to the Harbor Steps because its apartment demand
8
9 is driven by proximity to downtown job centers. In fact, the LID improvements diminish the
10
11 value of Harbor Steps' property by drawing visitors away towards improvements that do not
12
13 abut the property and increasing competition in other areas of the city. *See Kuskys*, 85 Wn.
14
15 App. 493 (testimony of owners' expert that LID actually diminished value of property was
16
17 sufficient to rebut presumption that assessment was proper). The ground floor retail tenants
18
19 will be harmed by the LID improvements because the Overlook Walk and Union Street
20
21 connection improvements will likely direct foot traffic away from the Harbor Steps and
22
23 towards Pike Place Market. Less demand for Harbor Steps' retail businesses will result in
24
25 lower rents and less revenue. Mr. Macaulay did not account for any of these impacts. Harbor
26
27 Steps already has a high-quality connectivity to the waterfront and no data was presented to
28
29 justify a value lift based on additional connection points several blocks away. On cross-
30
31 examination, Mr. Macaulay could not point to any specific data in the ABS Special Benefit
32
33 Study justifying the precise special benefit to Harbor Steps, claiming only that the market
34
35 would generally support additional connection points to the waterfront amenities. *See*
36
37 6/23/2020 Hrg. Tr. at 48-50.

38
39 74. Moreover, the assessment formula is an attempt to distribute costs that do not
40
41 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
42
43 "merely a mathematical model that distributes costs").

44
45 75. The Special Benefit Study fails to address whether the \$346,000,000
46
47 estimated LID project cost takes into account the investment that would have occurred in the

1 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
2 invested. This is a critical component of estimating which properties receive a direct benefit
3 from the improvements, versus more incidental benefits further from the park.
4

5
6 76. Mr. Macaulay also included personal property in his valuation of hotels even
7 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
8 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
9 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
10 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
11 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
12 receiving a disproportionately high LID assessment in comparison to other property types,
13 since hotels were the only property type subject to personal property LID assessments.
14
15 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
16 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
17 notice procedures because hotel property owners only received notice that their real estate
18 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
19
20

21 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
22 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
23 a television at the waterfront Marriott is assigned a greater special benefit than the same
24 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
25 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
26 unreasonable to assign a value lift to personal property that is replaceable at the same cost
27 and may be obsolete before the LID improvements are even completed. Further, personal
28 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
2
3 be redone to correct for this error.

4
5 78. The proposed final assessment substantially exceeds the special benefit to the
6
7 property and is grossly disproportionate to similarly situated properties within the LID. For
8
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).

12 **State Environmental Policy Act and Other Environmental Permitting**

13
14
15 79. While this appeal is not challenging the City's environmental review and
16
17 permitting processes, those processes are relevant in determining the legality of the
18
19 assessments, and to assessing the delivery risk, the present value of the City's plans, and
20
21 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
22
23 pursue projects that have not yet undergone environmental review (thus limiting the choice
24
25 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
26
27 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
28
29 is just beginning. Further, the City has segmented environmental review, and still has a
30
31 gauntlet of federal, state and tribal review processes to complete before it will be clear what
32
33 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
34
35 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
36
37 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
38
39 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
40
41 committing to reconstruction of Pier 58 and major street improvements without
42
43 environmental review, or the City's Final Special Study has improperly included and is
44
45 proposing to assess the Taxpayer the costs and special benefits of improvements that may
46
47 not get built. Either way, it is faulty process.

Due Process Rights

1
2
3 80. The City's failed to notify Harbor Steps sufficiently in advance of the hearing
4 to allow Harbor Steps to obtain evidence and prepare to properly challenge the assessments.
5 Because LID assessments involve a deprivation of property, affected owners have the right
6 to a hearing as to whether the improvement resulted (or will result) in special benefits to
7 their properties and whether their assessments are proportionate, which necessarily includes
8 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
9 555, 569–70, 229 P.3d 761 (2010).
10
11
12
13
14
15

16 81. The LID statute specifies that cities must mail notices giving the time and
17 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
18 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
19 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
20 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
21 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
22 secure their own appraisal), evaluate proportionality of the proposed assessments, and
23 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
24 for anybody to get an appraisal”).
25
26
27
28
29
30
31
32
33

34 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
35 Final Special Benefit Study has only been available for public review since January 7, 2020.
36 Due to this short time frame, Harbor Steps requested a prehearing conference and
37 scheduling order that would preserve and protect Harbor Steps’ right to analyze and respond
38 to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
39 accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the
40 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
41
42
43
44
45
46
47

1 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
2
3 the Examiner's Recommendation: I.B.
4

5 **VII. Relief Requested**
6

7 Harbor Steps respectfully requests that the City Council:
8

- 9 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection
10 and:
11
12 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
13 final assessment dated December 20, 2019; or
14
15 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
16 proposed final assessment to \$0 (zero), or such amount as Taxpayer
17 establishes at the hearing in this matter; or
18
19 c. Remand the matter to the Hearing Examiner or City appraiser to
20 recalculate and reduce Taxpayer's assessment using recognized
21 appraisal techniques consistent with USPAP and:
22
23 i. Excluding any property value increase attributable to viaduct
24 removal and other planned WSDOT Improvements;
25
26 ii. Taking into account the effects of COVID-19 pandemic on the
27 value of Taxpayers property and other relevant developments
28 since October 2019;
29
30 iii. Accounting for and excluding (1) any special benefits from
31 existing or planning improvements that already provide
32 similar benefits to Taxpayers property, and (2) any special
33 detriments from construction and other anticipated LID-
34 related disamenities;
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 iv. Accounting for and including only those actual benefits
2 anticipated to accrue to Taxpayer's property based on its
3 location relative to Pier 58, Overlook Walk, and the
4 Promenade, and specific elements of the LID Improvements;
5
6 v. Discounting anticipated special benefits to present value,
7 based on reliable estimates regarding when special benefits
8 will start accruing following completion of the LID
9 Improvements; and
10
11 vi. Accounting for such other issues specific to Taxpayer's
12 property relevant to calculation of such assessment; and
13
14
15
16
17
18
19

26
27

28 **III. Statement of Taxpayer's Interest**
29

30 Harbor Steps owns the property that is subject to the proposed final assessment
31 described in Section IV. The property at issue is a multifamily residential apartment building
32 with ground floor retail. Additionally, there is a pedestrian corridor connecting the
33 downtown retail core to the waterfront amenities.
34
35

36 The basis of the proposed assessment is a Final Special Benefit/Proportionate
37 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
38 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
39 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
40 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
41
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which was
22
23 based on the Final Study.

24
25 **IV. Matter Under Appeal**

26 Harbor Steps appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 1976200076
34 Site Address: 1201 1st Ave., Seattle, Washington
35 Proposed Final LID Assessment for Parcel: \$1,767,509.04

36
37 See Examiner’s Recommendation at 61-62, 105-106. To avoid repetition, Harbor Steps
38
39 incorporates the evidence and arguments raised before the Hearing Examiner into this
40
41 appeal. In particular, Harbor Steps points the City Council to Taxpayer’s initial Appeal
42
43 Petition, *Frye* motion, Closing Brief submitted at the close of its case-in-chief (dated
44
45
46
47

1 4/16/2020), and supplemental Closing Statement submitted at the close of the City's case-in-
2 chief (dated 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 105-106, Sections II.6, II.7, II.13, II.14, II.15, II.18, II.19, II.20, II.21, II.22,
8 II.23, II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2,
9 IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i),
10 IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.3, IV.C.4, IV.C.5, IV.C.7,
11 IV.C.8, IV.C.9, IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38
39

40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$4,511,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City's appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
5 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS's appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
16 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
17 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
18 the City's appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City's promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT's planned work.
25

26
27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34
35 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
36 or conjectural"
37

38 **ABS Study:** Not only are the improvements not yet "physical or material," but
39 environmental review and permitting for the City's proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City's then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
2 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
3 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
4 Final Study fails to meet basic standards for admissibility and must be remanded.
5
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2
3 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
4
5 statement below.
6

7 **V. Standard of Review**
8

9 “When considering the assessment roll, the city council sits ‘as a board of
10 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
11 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
12 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
13 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
14
15
16
17

18 The proposed assessments are presumed correct, “unless overcome by clear, cogent
19 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
20 than the heightened presumption of correctness on judicial appeal because “applying these
21 elevated standards at the municipal hearing would afford unwarranted deference to a report
22 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
23 presumption is not evidence and its efficacy is lost when the other party adduces credible
24 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
25 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
26 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
27 presented credible evidence showing that the City’s proposed assessment is arbitrary,
28 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
29 to the City to prove the assessments are actual, measurable, special, non-speculative and
30 proportionate. The City failed that burden.

47

1 **VI. Grounds for Appeal**

2 Harbor Steps appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Decl. of Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of
12 Ben Scott ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO Closing
13 Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have explicitly
14 rejected an argument that, because certain protestors 'failed to offer expert testimony at the
15 city council hearing[,] the presumptions [in favor of the assessment] were still operative as
16 to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail Trunk Sewer*, 35
17 Wn. App. at 843); *see also Kuskys v. City of Goldendale*, 85 Wn. App. 493, 933 P.2d 430
18 (1997) (although appraiser did not submit an appraisal, he provided expert opinion showing
19 that improvements actually diminished value of the property). In fact, no independent
20 evidence is required at all if, for example, objectors show that the assessment was grounded
21 on a fundamentally wrong basis due to an error in the City's appraiser's methods—as is the
22 case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of Everett*, 114 Wn. 2d 88,
23 106, 786 P.2d 253 (1990)). As a simple example, a property owner could simply point out
24 that the square footage assumed in the City's appraisal was incorrect.
25

26
27 2. On March 5, 2020, Harbor Steps presented testimony from experts Ben Scott
28 and Brian O'Connor. The Hearing Examiner failed to meaningfully respond either the expert
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 testimony or the expert appraisal reviews. Instead, the Hearing Examiner simply dismissed
2 Harbor Steps' expert evidence as insufficient appraisal evidence. *See* Examiner's
3 Recommendation at IV. C.7–9. This is contrary to law.
4

5
6
7 3. For these reasons, Taxpayer appeals the following portions of the Examiner's
8 Recommendation: Sections II.13, II.14, II.15, IV.A, IV.B.11(a), IV.C.7, IV.C.8, IV.C.9, and
9 IV.C.11.
10

11
12
13 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**
14

15 4. RCW 35.43.040 provides cities and towns authority for ordering local
16 improvements and for levying and collecting special assessments “on property specially
17 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed upon
18 all the property in accordance with the special benefits conferred thereon.” RCW 35.44.010.
19

20
21 5. No analysis of general benefits. Special assessments have been “held valid
22 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
23 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
24 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
25 they are for the construction of local improvements that are appurtenant to specific land and
26 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
27

28
29 6. Harbor Steps' property is not specially benefited by the LID Improvements.
30 The primary purpose and effect of the LID Improvements are to benefit “members of the
31 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
32 library is for the benefit of the members of the whole community individually and
33 collectively who may be served by it”). Mr. Macaulay's own chapter of the LID Manual
34 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
35
36
37
38
39
40
41
42
43
44
45
46
47

1 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
2 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
3 that if an appraiser “identifies both general and special benefits, these benefits should be
4 clearly distinguished and explained, and only special benefits should be included in the
5 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
6 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at 158:13-
7 159:8, 192:8-193:2. It is undisputed that Mr. Macaulay did not analyze or measure general
8 benefits, including those arising from construction necessary to meet basic design standards.
9 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
10 construction costs related to meeting design standards which may be general benefits as
11 distinct from construction costs emanating from requirements of the LID project”). To the
12 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
13 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
14 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
15 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31 7. LID Improvements not necessary. Unlike typical LID projects, the
32 Waterfront LID improvements are largely unnecessary to the functionality of any particular
33 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
34 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
35 held invalid where owners would have benefitted equally from increase of only 9 feet);

45
46
47

² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference, Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
2 intersection for new water main for hydrant held invalid because land was already afforded
3 functional hydrant at nearby street Here, Taxpayer testified that the LID Improvements are
4 not necessary to the business of their income-producing properties, all of which already have
5 sufficient access to the waterfront, downtown restaurants, and other amenities necessary for
6 their tenants and clients. And for residential properties, like Harbor Steps, the assumption
7 that an increase in tourism will cause lifts in property value is both anecdotally and
8 empirically unsupported. Additionally, the construction of new access points is in fact a
9 negative point for the Harbor Steps, which are located at an existing connection between the
10 downtown core and the waterfront. The LID improvements will draw foot traffic away from
11 the Harbor Steps, increasing competition in other areas of the city. The fact that there is no
12 case law differentiating between binary improvements and parks does not change the law
13 prohibiting assessments on properties already adequately served by existing amenities. *See*
14 Examiner's Recommendation at IV.C.3 (reasoning that "no case law is provided to support
15 the differentiation between a hardscape benefit and the more ephemeral benefits of park").
16 Nor does the Examiner's reasoning excuse the City's failure to account for existing
17 amenities as part of the special benefit calculation. As Dr. Crompton testified, existing view
18 amenities may in fact diminish the incremental effect of new park improvements on the
19 value of properties, much like turning on a weak light in an already brightly illuminated
20 room. *See* Hrg. Exhibit 94 (Crompton's Report) at 12-13.

21
22
23
24
25
26
27
28

30
31
32
33
34
35
36
37
38
39
40
41 8. To the extent benefits can be considered "special" as opposed to general, they
42 are nominal or nonexistent for many properties even in the Central Waterfront, which
43 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
44 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
45
46
47

1 change due to expansion of sewer service *near* owners' parcel which were already
2 connected). Here, the primary reasons a user chooses a particular apartment is not proximity
3 to the waterfront. Instead, the reason residents choose to live in the Harbor Steps apartments
4 is proximity to their places of employment and other amenities downtown. See 3/5/2020 (E.
5 Leigh0 Hrg. Tr at 113:13-114:20; 124:3-126:9. For example, without any supporting written
6 analysis, Mr. Macaulay offhandedly concludes that the Harbor Steps apartments would
7 benefit from increased connectivity from being four to five blocks from the Overlook Walk
8 even though the properties currently have direct access to the waterfront via the Harbor
9 Steps. 6/23/2020 Hrg. Tr. At 48:1-50:25; see also B. Scott Decl., ¶ 7. Mr. Leigh testified that
10 he did not anticipate a benefit, and that the Harbor Steps retail component would suffer if a
11 measurable portion of waterfront-bound pedestrian traffic moved north to the market. See
12 also B. Scott Decl., ¶ 6 (describing failure to analyze how existing retail is harmed by foot
13 traffic being pulled away towards new amenities). Even if the City could assess for a view
14 change (and it has promised not to assess for viaduct removal), the fair market value of
15 Harbor Steps' property has not changed because the LID Improvements have not improved
16 the property's waterfront view or access to the waterfront, nor will they when the City
17 anticipates completion in 2024. For these reasons, Taxpayer appeals the following portions
18 of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 9. No analysis of special detriments. The Final Study fails to properly account
38 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
39 owners for removal and cleanup of underground storage tanks discovered during the
40 improvement project). The Property owner representative for Harbor Steps, Ed Leigh,
41 testified that property values may in fact be negatively impacted by the LID Improvements
42 due to loss of parking, increased traffic and noise, and increased potential for crime,
43
44
45
46
47

1 homelessness and sanitation issues. Mr. Leigh testified that the assessment is an immediate
2 expense for Harbor Steps that comes with no immediate increase in revenue, thereby
3 decreasing property values. See 3/5/2020 (E. Leigh) Hrg. Tr. at 126:10-129:9; 227:8-229:10.
4
5 And Harbor Steps does not expect near term the increases assumed in ABS Valuations'
6
7 spreadsheets or the Final Study. Although Mr. Macaulay claims he analyzed impacts on the
8
9 City's planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no
10
11 explanation of how lost parking might be a detriment, and no property-specific parking
12
13 analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12.
14
15

16
17 10. Likewise, there was no analysis of the risks associated with disamenities such
18
19 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
20
21 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
22
23 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
24
25 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
26
27 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
28
29 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
30
31 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
32
33 the maintenance agreement. *Id.* at 13:4-14:2.
34

35 11. There was also no consideration of negative impacts from another four-plus
36
37 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
38
39 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
40
41 law allowing him to dismiss these actual, non-speculative impacts. Because future special
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 benefits calculations are inherently speculative, Washington's eminent domain statute
2 specifically allows condemnees to postpone special benefits assessments until improvements
3 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
4

5
6 Moreover, the studies that Mr. Macualay relied on demonstrate that construction disamenity
7 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
8 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
9 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
10 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
11 II.25, IV.B.8, and IV.B.9.
12

13
14 12. Special benefit estimate is speculative. When calculating a special benefit,
15 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
16 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
17 becomes pure speculation." *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
18 P.2d 1078 (1958)).
19

20
21 13. Assuming without conceding that one day, the City's planned LID
22 Improvements might increase the value of neighboring properties to some extent, that
23 potential benefit is many years away and speculative. While appraisers tolerate some degree
24 of estimation and judgment, Taxpayer's expert testified that Mr. Macaulay's Final Study is
25 far too speculative to satisfy industry practices and standards.
26

27
28 14. Although LIDs are sometimes finalized prior to completion of improvements,
29 this is typically just six month or a year prior, and the assessments are otherwise supported
30 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
31 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
32 will not be realized for four or five years. In the meantime, there is permitting risk,
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
2 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
3 and to what extent, different factors will impact value. *Id.* at 51:13-53:5. Ultimately, Mr.
4 Macaulay concedes that there is inherent uncertainty in valuing the future delivery of
5 projects because "we can't read the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he
6 testified: "I just don't know what the market value would be as of the date the project would
7 be finally constructed" because "[t]here could be a lot of elements in the market that did
8 occur between now and then that impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.*
9 at 211:8-20 (no way to know if his estimates will be higher or lower than comparable sales
10 in 2024 because "markets tend to fluctuate over time" and "I can't predict the future").
11
12
13
14
15
16
17
18
19
20

21 15. The record is clear that while no one can know what "special benefit" might
22 accrue to these properties in four years (if any), we do know that there are no actual benefits
23 now. The LID improvements provide no immediate special benefit to property owners
24 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
25 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
26 sewer system for future users). For example, notwithstanding the questionable hypothesis
27 that apartments will benefit from an expected increase in tenant interest when the
28 improvements are complete, it is undisputed that tenants are not coming in larger numbers
29 and paying higher rental rates now because of something happening five years down the
30 road. See O'Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased
31 today for 18 months would rent at a higher rate due to improvements coming in 2024).
32
33
34
35
36
37
38
39
40
41

42 16. Further, there are no "plans and specifications" on file with the Clerk's Office
43 for the LID Improvements, and it is unlawful to move to final assessments without such
44 "plans and specifications." Ordinance 125760, Section 3; *Local and Road Improvement*
45
46
47

1 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
2
3 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
4
5 dollars on projects still early in the design process. *See* Washington Attorney General
6
7 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
8
9 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
10
11 of programs and included “only so much of the overall costs” that took place within and
12
13 benefitted the assessed properties).

14
15 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
16
17 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
18
19 anticipated to be delivered five years later. Even before COVID, it was speculative to
20
21 assume that market highs experienced in October 2019¹ would be sustained through 2024,
22
23 after an already extraordinarily long expansion period. *See, e.g.*, 3/5/2020 (E. Leigh) Hrg.
24
25 Tr. at 119:15-123:6; 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr.
26
27 Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have
28
29 thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his
30
31 deposition in late February, his “thought process was that the market was going to continue
32
33 to go up,” but now, they are already irrelevant. *Id.*; *see* Gibbons Decl. ISO Closing Stmt. at ¶
34
35 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019
36
37 (*see* Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
38
39 rendered the hypothetical October 2019 Final Study valuations outdated.

40
41 18. As another example of how future events could affect the accuracy and
42
43 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
44
45 Examiner re-open the record to allow the City to explain whether the assessments against
46
47 property owners within the LID are, in fact, being used by the City to fund the emergency

1 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
2 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
3 would be improperly imposing costs on property owners within the LID for improvements
4 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
5 habitat and City infrastructure—this does not provide any special benefit to LID property
6 owners.
7
8
9
10
11

12 19. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
19 potential delays and project changes inherent in those processes, that call into question the
20 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110

1 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
2 Decl., dated 4/15/2020).
3

4
5 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
6 he could not point to a single one where the assessment roll was finalized five years in
7 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
8 he has never recommended final special assessments based on designs less than 30 percent
9 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
10 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
11 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
12 at 66:17-25. He performed no independent due diligence to determine the reliability of the
13 City’s estimates for completion of the LID Improvements, or to ensure that proposed
14 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
15 agreed that if any of his assumptions are incorrect, his opinion of market value would need
16 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
17 68:11-18.

25
26
27
28
29

30 21. The City has cited no authority—and Taxpayer is aware of none—that
31 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
32 assess taxes for “actual” special benefits that will not accrue for another five years (if all
33 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
34 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
35 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
36 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
37 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
38 IV.C.14, and IV.C.18.
39
40
41
42
43
44
45
46
47

1 22. Failure to discount special benefit estimates to account for risks and present
2 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
3 have accounted for risks associated with delivery of the improvements (including permitting
4 risk, construction risk, general economic risk) and any special damages associated with
5 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
6 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
7 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
8 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
9 the impact of future conditions [through] discounted cash flow analysis.").

10 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
11 future condition not in place at the date of valuation and can discount for the time value of
12 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
13 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
14 Discounting would also have been consistent with his approach for analyzing special
15 benefits to vacant land. He testified that the difference between similarly situated vacant
16 sites slated for development and already developed sites was that the labor, capital and risks
17 associated with development had not yet been borne for those vacant sites. Therefore, the
18 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
19 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
20 fully permitted, has not completed environmental review, and has not reached full design is
21 presently worth significantly less.

22 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
23 present value, an appraiser would consider discount rates for land development to account
24 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at

1 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer to
2 the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
3 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
4

5
6 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
7 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
8 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
9 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
10 ignoring momentarily all of the other methodological and other flaws discussed here and in
11 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
12 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
13 exceeds special benefits when reduced to present value. Further, to the extent the City is
14 arguing that because they are permitted to assess 100% of the special benefit, the special
15 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
16 is again wrong. After applying proper discounting, the City's proposed special benefit
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18 100% of the total estimated special benefit.
19
20

21 26. But even the assumption that the LID improvements would deliver benefits
22 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
23 on. Rather, those studies demonstrate that a discount period of five years is conservative.
24 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
25 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
26 indicates that during the construction period, the Greenway district "significantly" lagged in
27 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
28 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
29
30
31
32
33
34
35

43
44
45
46
47

1 30-31 (discussing New York City High Line and San Francisco Embarcadero
2 improvements). Given the lengthy delay, any prediction of future special benefits is
3 speculative, especially during the construction phase where values are likely to decline. And
4 assuming the LID Improvements take a similarly long period of time after they are complete
5 to start producing tangible property value benefits, each additional year of delay results in
6 further discount to the present value of any future alleged benefit. Gibbons Decl. ISO
7 Closing Stmt., ¶ 19, Ex. A.
8

9
10 27. Applying the same discounting methods described above and in Mr. Gibbons
11 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
12 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
13 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
14 100% assessment should be no more than \$424,936.20. Anything more would permit the
15 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
16 place and providing benefit, and ignore the risks, construction disamenity, and time value of
17 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
18 would counsel that the assessment should be only 39.2% of that assessment cap, or
19 \$166,574.99.
20

21 28. Attachment C includes two Excel spreadsheets applying these discounting
22 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
23 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
24 demonstrates that discounting the City's hypothetical October 2019 special benefits to
25 present value would reduce Taxpayer's assessment to \$606,410, exclusive of any other
26 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
27 reductions after taking into account (1) Taxpayer's exerts' estimated "Before" valued based
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4
5 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
6
7 the time it takes for the improvements to capture property value.) After such reductions,
8
9 Taxpayer's assessment would be just \$465,940 (for the 5-year discount) or \$128,025 (for the
10
11 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
12
13 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
14
15 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
16
17 Taxpayer's discounting argument without legal or factual analysis; that failure is error.

18 **Appraisal and Assessment Calculation Methods Are Flawed**

19
20
21 29. The "general rule is that each lot, piece, or parcel of land should be assessed
22
23 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
24
25 Wn.2d at 97.

26
27 30. It is proper to sustain a challenge to an assessment, even without the appraisal
28
29 testimony from the owner, where the objector's expert establishes that the assessment was
30
31 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
32
33 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.

34
35 31. The City's appraiser purports to utilize the income method of valuation but
36
37 relied on inaccurate revenue and market data, as discussed further below.

38
39 32. The City's appraiser purports to utilize the comparable sales method of
40
41 valuation, but no City witness attempted "to characterize any one, or all of them, as
42
43 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
44
45 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
46
47 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to

1 characterize any one, or all of them, as comparable to any particular property within the LID”).
2
3 And no City witness could explain how specific adjustments were made to these sales to
4
5 account for value increases due to the hypothesized Before and After Improvements. For this
6
7 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
8

9 33. Special assessment improperly includes value lift from the Before
10 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
11
12 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
13
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15
16 Macauley did not calculate the actual market value of LID properties in October 2019 and
17
18 did not separately analyze the hypothetical increase to property values attributable to
19
20 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
21
22 current value and then separately calculate a hypothetical “With WSDOT” Before value);
23
24 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
25
26 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
27
28 Petition) at 3-4. Without any documented basis or support, Mr. Macauley simply “ma[de] a
29
30 judgment a call” on what occupancy and rates would have been for the commercial
31
32 properties assuming all of the WSDOT Improvements are completed as of 2019. Macauley
33
34 Depo. at 129:19-130:11. For example, Mr. Macauley surmised that Brian O’Connor’s
35
36 conclusion that the “Before” value for Harbor Steps was overstated by \$88M was perhaps
37
38 due to the fact that Mr. O’Connor was looking at current income numbers and not
39
40 accounting for the value of the “Before” conditions. However, when asked whether the
41
42 value of the of the “Before” conditions is lower or higher than \$88M, Mr. Macauley had no
43
44 clue because he did not do this analysis. 6/23/2020 Hrg. Tr. at 46:9-17:25. This outright
45
46 omission precludes any independent evaluation of the true market “Before” values. *See*
47

1 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards; if an
2 appraiser uses current sales data to infer values, then the appraiser must explain how he
3 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
4 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
5 other road, pedestrian and landscaping improvements WSDOT had already committed to
6 make.
7

8
9
10
11
12 34. However, because Mr. Macaulay testified that he did include some WSDOT-
13 related value-lift in the “Before” values, it follows that part of the special assessment
14 improperly is based on value attributable to the WSDOT Improvements. As shown by
15 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
16 percentage to Before values. So, for example, if Mr. Macaulay believed the WSDOT
17 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
18 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
19 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
20 to properly exclude the value of Before Improvements from the assessments. For these
21 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
22 Sections II.19, II.29, and IV.B.11(a)(ii)
23

24
25 35. Special benefits were assigned rather than measured. Mr. Macaulay
26 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
27 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/5/2020 (B.
28 O’Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
29 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
30 commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based adjustments
31 on hypothesized very small increases to property revenue and very small reductions to cap
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 rates to “calculate” an “After” value due to the coming 2024 LID Improvements.

2
3 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
4
5 “professional judgment” that are neither shown nor replicable.

6
7 36. For these reasons, Taxpayer appeals the following portions of the Examiner’s
8
9 Recommendation: Sections II.19, and IV.B.11(a)(iii).

10
11 37. Special benefit falls within margin of error. The Final Special Benefit Study
12
13 applies an estimated value enhancement of less than 4%, which is generally within the
14
15 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
16
17 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
18
19 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
20
21 of one another, this difference is considered reasonable as it falls within the standard margin
22
23 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
24
25 O’Connor) Hrg. Tr. 201:7-204:8. Because Mr. Macaulay’s micro-special benefit percentages
26
27 fall far below that 5% margin, “there is no way of authenticating” such incremental changes
28
29 because “[m]arket forces completely obliterate any tiny little noise factor like that.” *See*
30
31 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed during his deposition
32
33 that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Additionally, the fact that
34
35 “Before” values are also based on a hypothetical that adds some unstated incremental value
36
37 to actual 2019 values exacerbates this issue—the ability for an appraiser to discern the
38
39 micro-value differences between hypothetical conditions that are so similar (the WSDOT
40
41 improvements compared to the LID improvements) “verges on being ludicrous.” 3/3/2020
42
43 (A. Gibbons) Hrg. Tr. at 89:4-90:7.

44
45 38. Even if it were possible to accurately tease out such a miniscule hypothetical
46
47 value change due to improvements coming five years later, experts testified that there is no

1 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
2
3 what he felt the changes (hypothetically) would be. *See* 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 39. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 40. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 41. Special assessment is not supported by comparable studies, data or reports.

25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for residential and commercial combined properties,
30 including Taxpayer’s property. For example, although Mr. Macaulay stated that no single
31
32
33
34
35
36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 report or study was directly on point due to the unique nature of the LID Improvements (*see*,
2 *e.g.*, 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific
3 adjustments in his parcel-by-parcel analysis other than to say that the studies generally
4 provided “some background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12;
5 *see also* 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account
6 for similarities and differences between these improvements and the comparable parks he
7 looked at).
8

9
10 42. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
11 assignment of incremental increase of 0.5% to 4% to property values within the LID.
12 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
13 research misinterprets his work in critical ways, including because the LID Improvements
14 manifest the characteristics of a parkway (not a park), and his research indicates that most of
15 a *park*’s impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
16 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
17 related value increases are in fact smaller; that estimated increases are “best guesses” rather
18 than predictions of property value increases in a particular city; and that percentages do not
19 account for diminishing returns after taking into account water views, which would be the
20 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
21 topography grants most properties in downtown a water view.
22

23 43. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
24 that this was just one source of information that was not entirely relevant because, among
25 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
26 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
27 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
28
29
30
31
32
33
34
35
36

45
46
47

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3
4 Crompton concluded that 500 feet via road from “park” improvements is just one or two
5
6 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
7
8 significantly beyond that which the park study indicated (even if it was legitimate to use the
9
10 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
11
12 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
13
14 impact applicable to “community parks”—which the LID Improvements are not. *Id.*

15
16 44. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
17
18 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
19
20 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
21
22 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
23
24 materials, it was clearly an important—if not *the* most important—source of information for
25
26 estimating special benefits (especially with respect to the condos).⁷ No City witness
27
28 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
29
30 parcel-by-parcel analysis.
31

32
33 45. The destination parks discussed in the Final Special Benefit Study do not
34
35 provide reliable, comparable, and valid support for the calculation of special assessments
36
37 here. *See* Gibbons 5/2/2018 Letter at 4. None of the parks cited in the Final Special Benefit
38
39 Study were funded by a LID. And in virtually all of those cases, the park improvements
40

41
42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 dramatically restored unimproved or blighted areas, and properties evaluated were within
2
3 two or three blocks of the park.

4
5 46. ABS's claimed reliance on three economic studies to support property value
6 increase is also flawed. The HR&A study does not inform what value increases are
7
8 expected from the LID Improvements because it projects increases to tourism from *all* of the
9
10 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
11
12 dissimilar parks in other cities,⁸ making the methodological application to the LID
13
14 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
15
16 conclusion that there would be *no new net visitors* from downtown residents as a result of
17
18 the LID Improvements and could not explain how this impacted his condo analysis.
19
20 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
21
22 Property Values" primarily focused on whether the benefits accrue to the larger community
23
24 rather than properties adjacent to the park. And the 2014 New York City Department of
25
26 Transportation study is not based on real estate transactions and market sales and fails to
27
28 substantiate any link between increased retail sales and property values. Moreover, this
29
30 study only looked at impact either directly abutting the streetscape improvement, or a couple
31
32 hundred feet for plaza-like improvements.
33

34
35 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
36
37 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
38
39 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
40
41

42
43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
2 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
3 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
4 asked whether he considered that HR&A’s estimated LID impact is six times greater than
5 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
6 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
7 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
8 assumptions to account for this difference, which may be partly explained by the fact that
9 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
10 approximately 3.44% of King County tourists visit Seattle primarily because of the city
11 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
12 waterfront improvements.

13
14
15
16
17
18
19
20
21
22
23
24
25 48. Although proximity to the improvements is a key factor in all of these
26 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
27 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
28 not understand that for both the Trust for Public Lands study and Dr. Crompton’s study,
29 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
30 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
31 Improvements is approximate 20 acres and it is not a community park.⁹

32
33
34
35
36
37
38
39 49. There is no explanation in the Final Study or the supporting materials of how
40 the studies or comparable sales were used to derive values for Taxpayer’s property. For
41

42
43
44
45 ⁹ *See*
46 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf (“Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle’s central waterfront to downtown.”).

1 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2
3 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

4
5 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
6
7 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
8
9 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
10
11 recognized) for developing the MAI standards for mass appraisals, testified that the Final
12
13 Study does not meet mass appraisal standards nor allow for independent assessment of the
14
15 accuracy of Mr. Macauley's conclusions.

16
17 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
18
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20
21 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
22
23 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
24
25 testimony suggests that he incorrectly believed that the only difference between direct
26
27 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
28
29 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
30
31 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
32
33 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
34
35 Gordon uses in doing his limited restricted report").

36
37 52. But the difference is not only in reporting—mass appraisal techniques must
38
39 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
40
41 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
42
43 parcel approach:

44
45 The mass appraisal technique is an appraisal method used to evaluate
46
47 a group of properties that are subject to similar market forces as of a
certain date through the use of market data, statistical analysis and

1 testing. As a result, the mass appraisal technique does not require or
2 involve analysis of each individual property's specific data.

3
4 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).

5
6
7 53. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
8 universe of properties as a given date using standard methodology, employing common data,
9 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
10 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
11 model" is "a mathematical expression of how supply and demand factors interact in a
12 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
13 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
14 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

15
16
17 54. Regardless of client direction, Mr. Macaulay is required to comply with
18 USPAP. So, if, as he determined, a "[p]arcel-by-parcel direct appraisal" would not have
19 been economically feasible because it would have taken "an incredible amount of time and
20 cost" (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an
21 appraisal consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8
22 ("performing an individual appraisal of each [condo] parcel would have been cost and time
23 prohibitive").

24
25 55. But Mr. Macaulay's methods fail to comply with USPAP Standards 5 and 6
26 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
27 value, fails to calibrate the model structure to determine the contribution of the individual
28 characteristics affecting value, and does not review the mass appraisal results against actual
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
2
3 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

4
5 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
6
7 proximity to the elements, the increase in market rent, market vacancy changes,
8
9 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
10 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
11
12 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
13
14 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
15
16 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
17
18 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
19
20 were hypothetical, it was not possible to identify matched pair sales and no City witness
21
22 explained how ABS Valuation made adjustments to “comparable” sales in order to check
23
24 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
25
26 him to explain his model structure.
27

28
29 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
30
31 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36
37 relationship between characteristics that affect value, and to calibrate that model to specify how
38
39 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
40
41 21). The purpose is to rationally determine what characteristics will create value, and by how much.
42
43 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
44
45 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
46
47 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
include explanation of the model specification, data requirements, calibration methods, and
mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
(o). Without this reporting, it is impossible for users of the appraisal report to determine how the
appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
Hrg. Tr. at 206:15-207:17.

1 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
2
3 and appeals the Examiner's denial of that motion.
4

5 58. Finally, Taxpayer's property is not appurtenant—or even in close
6
7 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
8
9 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
10
11 close proximity to the property on which expert testimony was given”). As described above,
12
13 the special assessment is overstated because the Final Study makes no attempt to determine
14
15 general benefits, existing amenities for Taxpayer's specific property, or special detriments.
16
17 In addition, it is speculative due to the fact that, as of October 2019, improvements were not
18
19 in in place—and, in fact, much of the waterfront is a construction zone following removal of
20
21 the viaduct and now Pier 58 demolition. Under these circumstances, rather than relying on
22
23 entirely imaginary income and shaky hypotheticals, Mr. Macaulay at the very least should
24
25 have discounted the special benefit estimates or waited to perform the Study until the
26
27 improvements were at least close to complete.
28

29 **Erroneous Pre-Improvement Valuation**

30
31 59. The proposed final assessment erroneously overstates the pre-improvement
32
33 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
34
35 benefit to the Taxpayer's property.
36

37 60. The City's Final Study was used to compute the proposed final assessment of
38
39 Harbor Steps' property. The City's Study purportedly uses data from the King County
40
41 Department of Assessments,¹¹ but the pre-improvement valuation information in the Final
42
43

44
45 ¹¹ *See, e.g.*, Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet
46 (providing a “County Link” to the King County Department of Assessment's online “eReal
47 Property” search tool).

1 Study does not accurately reflect this data. For example, the City's Study values Harbor
2 Steps' property at \$180,511,000 as of October 1, 2019. However, the King County assessor
3 determined the true and fair value of the property to be \$185,880,000, valued in 2019 for tax
4 year 2020. In other words, the Final Special Benefit Study's valuation is 97.1% of King
5 County's assessed value. The Final Special Benefit Study does not explain this difference—
6 or any differences—between its pre-improvement valuation and its supposed source for
7 market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
8 Recommendation.
9

10
11
12
13
14
15
16
17 61. Further, the City's analysis was based on unreliable market data. The ABS
18 appraisal overstated the combined total before market value for all four Harbor Steps'
19 parcels by about \$88 million. B. O'Connor's Jan. 31, 2020 Report (attached to Appeal
20 Petition), Ex. 6. Based on our expert appraiser's appraisal review, the true and fair value of
21 the property here as of October 1, 2019 was \$158,511,000. *Id.* (Assuming equal value
22 between all parcels).
23
24
25
26
27

28
29 62. Thus, aside from multiple other reasons why computation of the special
30 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
31 improvement values that do not accurately reflect market data. For these reasons, Taxpayer
32 appeals the following portions of the Examiner's Recommendation: Sections II.13, II.14,
33 and II.15.
34
35
36
37
38

39 **Erroneous Computation of Special Benefit**

40
41 63. "Special benefit" is "the increase in fair market value attributable to the local
42 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
43 may receive by reason of the improvement is not measured alone by the physical character
44 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
45
46
47

1 of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
2 the particular tract or property benefited by the entire improvement, and is it assessed
3 proportionately with the other property included within the assessment district?” *Id.* 165–
4
5 66.
6
7

8
9 64. The proposed final assessment erroneously overstates the special benefit of
10 LID improvements in a number of ways.
11

12
13 65. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
14 the Harbor Steps, Mr. Macaulay assumed room/rental rates would increase by 2.00% (low)
15 and 3.00% (high) due to the 2024 LID Improvements. Mr. Macaulay then uses these same
16 percentages (2.00% and 3.00%) to increase retail and parking. He then uses this
17 hypothesized increased revenue to calculate a new net operating income for the commercial
18 properties and capitalizes that to come up with an “After” valuation.
19
20

21
22 66. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
23 operating income remains the same as in the hypothetical “Before” condition but changes
24 the cap rate. For the Harbor Steps, the cap rate goes from 4.10% to 3.98% (low scenario,
25 creating a bigger value increase) and 4.02% (high scenario, creating a lower value increase).
26
27

28
29 67. Mr. Macaulay then averages his four “After” values to arrive at a final special
30 benefit conclusion. For the Harbor Steps, this is an increase in property value of 2.50% due
31 to the LID Improvements.
32
33

34
35 68. Mr. Macaulay offered little justification for his micro adjustments to revenue
36 and capitalization rates. When asked precisely what the basis is for his special benefit
37 percentage increases to revenue for each commercial property, he could not point to
38 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
39 is nothing in the report to allow a reader to understand how he came up with these
40
41
42
43
44
45
46
47

1 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
2
3 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
4
5 the basis for his belief that certain factors—liked increased connectivity—will increase
6
7 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
8
9 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
10
11 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
12
13 sources equally even though there was no separate analysis done for food and beverage or
14
15 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
16
17 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
18
19 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
20
21 properties.

22
23 69. Mr. Macaulay testified that he used comparable sales as a reasonableness
24
25 check for commercial properties. But as explained above, no City witness has explained
26
27 how anyone, or all, of the sales are comparable to any particular commercial property within
28
29 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
30
31 in order to make sales “comparable,” he would have had to make adjustments to account for
32
33 Before and After conditions, but there is no way to understand how adjustments were made
34
35 because he “didn’t do a separate sales comparison approach where we showed adjustments
36
37 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
38
39 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
40
41 *Id.* at 127:10-128:24.

42
43 70. It also bears noting that any “internal review” of the special benefit estimates
44
45 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
46
47 error. Indeed, given all the same information, he seemed to suggest that it would be

1 perfectly reasonable for another experienced appraiser to come up with special benefit
2 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
3 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
4 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
5 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
6 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
7 margin of error (5%) is a "rule of thumb" and not a "hard legal standard," there are still
8 reasonable and unreasonable variations within the appraisal field. *See Examiner's*
9 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
10 special because it is arbitrarily assigned; and it is too small to realistically be supported by
11 appraisal techniques.

22 71. No evidence of special benefit. Meanwhile, there is "no actual evidence from
23 any seller or purchaser that the price was higher because of the LID improvements."
24 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser "has not
25 identified any seller or buyer, or any particular property where the existence of the LID
26 improvements had an effect on the market price." *Id.* at 410-11. Meanwhile, Taxpayer has
27 explained that the property has not increased rental rates or revenue due to the forthcoming
28 LID Improvements, because, among other reasons (and apart from COVID), the
29 improvements ABS believes will generate value do not exist and will not for a number of
30 years to come. There are no comparable sales because the LID Improvements are not in
31 place, nor will they be until the end of 2024 if completed on schedule.

42 72. The fair market value of Harbor Steps' property has not changed due to
43 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
44 benefited from installation of new water main and fire hydrant where it was already
45
46
47

1 adequately supplied with water and afforded adequate fire protection). And in any event,
2
3 any value attributable to removal of the viaduct was to be excluded from the assessment
4
5 calculation.

6
7 73. There is no special benefit to the Harbor Steps because its apartment demand
8
9 is driven by proximity to downtown job centers. In fact, the LID improvements diminish the
10
11 value of Harbor Steps' property by drawing visitors away towards improvements that do not
12
13 abut the property and increasing competition in other areas of the city. *See Kuskys*, 85 Wn.
14
15 App. 493 (testimony of owners' expert that LID actually diminished value of property was
16
17 sufficient to rebut presumption that assessment was proper). The ground floor retail tenants
18
19 will be harmed by the LID improvements because the Overlook Walk and Union Street
20
21 connection improvements will likely direct foot traffic away from the Harbor Steps and
22
23 towards Pike Place Market. Less demand for Harbor Steps' retail businesses will result in
24
25 lower rents and less revenue. Mr. Macaulay did not account for any of these impacts. Harbor
26
27 Steps already has a high-quality connectivity to the waterfront and no data was presented to
28
29 justify a value lift based on additional connection points several blocks away. On cross-
30
31 examination, Mr. Macaulay could not point to any specific data in the ABS Special Benefit
32
33 Study justifying the precise special benefit to Harbor Steps, claiming only that the market
34
35 would generally support additional connection points to the waterfront amenities. *See*
36
37 6/23/2020 Hrg. Tr. at 48-50.

38
39 74. Moreover, the assessment formula is an attempt to distribute costs that do not
40
41 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
42
43 "merely a mathematical model that distributes costs").

44
45 75. The Special Benefit Study fails to address whether the \$346,000,000
46
47 estimated LID project cost takes into account the investment that would have occurred in the

1 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
2 invested. This is a critical component of estimating which properties receive a direct benefit
3 from the improvements, versus more incidental benefits further from the park.
4

5
6 76. Mr. Macaulay also included personal property in his valuation of hotels even
7 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
8 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
9 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
10 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
11 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
12 receiving a disproportionately high LID assessment in comparison to other property types,
13 since hotels were the only property type subject to personal property LID assessments.
14
15 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
16 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
17 notice procedures because hotel property owners only received notice that their real estate
18 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
19
20

21 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
22 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
23 a television at the waterfront Marriott is assigned a greater special benefit than the same
24 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
25 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
26 unreasonable to assign a value lift to personal property that is replaceable at the same cost
27 and may be obsolete before the LID improvements are even completed. Further, personal
28 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
2
3 be redone to correct for this error.

4
5 78. The proposed final assessment substantially exceeds the special benefit to the
6
7 property and is grossly disproportionate to similarly situated properties within the LID. For
8
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).

12 **State Environmental Policy Act and Other Environmental Permitting**

13
14
15 79. While this appeal is not challenging the City's environmental review and
16
17 permitting processes, those processes are relevant in determining the legality of the
18
19 assessments, and to assessing the delivery risk, the present value of the City's plans, and
20
21 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
22
23 pursue projects that have not yet undergone environmental review (thus limiting the choice
24
25 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
26
27 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
28
29 is just beginning. Further, the City has segmented environmental review, and still has a
30
31 gauntlet of federal, state and tribal review processes to complete before it will be clear what
32
33 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
34
35 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
36
37 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
38
39 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
40
41 committing to reconstruction of Pier 58 and major street improvements without
42
43 environmental review, or the City's Final Special Study has improperly included and is
44
45 proposing to assess the Taxpayer the costs and special benefits of improvements that may
46
47 not get built. Either way, it is faulty process.

Due Process Rights

1
2
3 80. The City's failed to notify Harbor Steps sufficiently in advance of the hearing
4 to allow Harbor Steps to obtain evidence and prepare to properly challenge the assessments.
5 Because LID assessments involve a deprivation of property, affected owners have the right
6 to a hearing as to whether the improvement resulted (or will result) in special benefits to
7 their properties and whether their assessments are proportionate, which necessarily includes
8 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
9 555, 569–70, 229 P.3d 761 (2010).
10
11
12
13
14
15

16 81. The LID statute specifies that cities must mail notices giving the time and
17 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
18 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
19 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
20 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
21 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
22 secure their own appraisal), evaluate proportionality of the proposed assessments, and
23 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
24 for anybody to get an appraisal”).
25
26
27
28
29
30
31
32
33

34 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
35 Final Special Benefit Study has only been available for public review since January 7, 2020.
36 Due to this short time frame, Harbor Steps requested a prehearing conference and
37 scheduling order that would preserve and protect Harbor Steps’ right to analyze and respond
38 to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
39 accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the
40 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
41
42
43
44
45
46
47

erroneously denied that request. For this reason, Taxpayer appeals the following portions of the Examiner's Recommendation: I.B.

VII. Relief Requested

Harbor Steps respectfully requests that the City Council:

1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection and:
 - a. Cancel the Waterfront Local Improvement District No. 6751 proposed final assessment dated December 20, 2019; or
 - b. Revise Taxpayer's Waterfront Local Improvement District No. 6751 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the hearing in this matter; or
 - c. Remand the matter to the Hearing Examiner or City appraiser to recalculate and reduce Taxpayer's assessment using recognized appraisal techniques consistent with USPAP and:
 - i. Excluding any property value increase attributable to viaduct removal and other planned WSDOT Improvements;
 - ii. Taking into account the effects of COVID-19 pandemic on the value of Taxpayers property and other relevant developments since October 2019;
 - iii. Accounting for and excluding (1) any special benefits from existing or planning improvements that already provide similar benefits to Taxpayers property, and (2) any special detriments from construction and other anticipated LID-related disamenities;

- 1

- iv. Accounting for and including only those actual benefits anticipated to accrue to Taxpayer's property based on its location relative to Pier 58, Overlook Walk, and the Promenade, and specific elements of the LID Improvements;
 - v. Discounting anticipated special benefits to present value, based on reliable estimates regarding when special benefits will start accruing following completion of the LID Improvements; and
 - vi. Accounting for such other issues specific to Taxpayer's property relevant to calculation of such assessment; and

2. Grant such further relief as the City Council deems just and proper.

Hearing Examiner File No. CWF-0429

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON HEDREEN
LLC’S OBJECTION TO WATERFRONT
LID NO. 6751 PROPOSED FINAL
ASSESSMENT FOR PARCEL NO.
2285130010

33 Hedreen LLC (“Taxpayer”) files this appeal pursuant to RCW 35.44.070, Seattle
34 Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice of the Seattle Office
35 of the City Clerk dated December 30, 2019, and the Hearing Examiner’s Findings and
36 Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).
37
38

28 Facsimile: 206.359.9000
29
30

31 **III. Statement of Taxpayer's Interest**

32 Hedreen LLC is the taxpayer for the property that is subject to the proposed final
33 assessment described in Section IV. This property is the Hyatt at Olive 8, a 17-story hotel
34 containing 346 guest rooms and 12,000 square feet of meeting space.
35
36

37 The basis of the proposed assessment is a Final Special Benefit/Proportionate
38 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
39 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
40 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
41 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
22
23 was based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Taxpayer appeals the Hearing Examiner’s recommendation to remand Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 2285130010
34 Site Address: 1635 8th Avenue, Seattle, WA 98101¹
35 Proposed Final LID Assessment for Parcel: \$733,883

36
37 See Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
38
39 the evidence and arguments raised before the Hearing Examiner into this appeal. In
40
41 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*

42
43 ¹ Taxpayer’s expert appraisal states that the address is 1635 8th Avenue, Seattle, WA 98101.
44 See EXHIBIT 7. The Assessment Notice states that the address is 737 Olive Way, Seattle,
45 Washington 98101. See EXHIBIT 1. King County Department of Assessments’ states that the site
46 address is 1615 8th Ave, Seattle, WA 98101. See
47 <https://blue.kingcounty.com/Assessor/eRealProperty/Dashboard.aspx?ParcelNbr=2285130010>.

1 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
2 supplemental Closing Statement submitted at the close of the City’s case-in-chief (dated
3 7/7/2020).²
4

5
6 As discussed more fully below, Taxpayer specifically appeals the following Findings
7 and Recommendations in the Hearing Examiner’s September 8, 2020 Recommendation:
8
9 Pages 61-62, 106, Sections II.6, II.7, II.12, II.14, II.16, II.17, II.18, II.19, II.20, II.21, II.22,
10 II.23, II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2,
11 IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i),
12 IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5,
13 IV.C.8, IV.C.10, IV.C.11, IV.C.12, IV.C.14, and IV.C.18.
14
15

16 Taxpayer also appeals the Hearing Examiner’s failure to make findings of fact or
17 recommendations on material issues raised during Taxpayer’s appeal that were supported by
18 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
19 requirements of a LID assessment study, and the Examiner’s Recommendation ignores the
20 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
21 recommended anything other than denial of objectors’ appeals were where the City’s
22 appraiser confessed error. The appraiser’s proposed assessments, and the Examiner’s
23 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
24 special assessments based on “fundamentally wrong methods.”
25
26
27
28
29
30
31
32
33
34
35
36
37
38

39
40 ² Because the City has not provided “metered index numbers,” our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee’s consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner’s electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$1,873,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” See Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
47

1 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
2 property (furniture, fixtures and equipment), but not personal property of other types of
3 property. It is not proportionate to assess against hotel personal property and not other
4 personal property. Further, personal property is moveable, the value does not depend on
5 location, and is likely to be fully depreciated and perhaps removed before the LID
6 Improvements are in place. (Note also that personal property accounts are separate, and
7 the City gave no notice of any LID assessment against personal property. The Examiner
8 should have reversed personal property assessments on that basis as well.)
9

10
11 **Legal Requirement:** Must comply with appraisal standards
12

13 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
14 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
15 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
16 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
17 Final Study fails to meet basic standards for admissibility and must be remanded.
18
19

20
21 **Legal Requirement:** Actual and measurable special benefit
22

23 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
24 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
25 on a host of "micro-judgments" that are not supported by any documentation, nor capable
26 of replication or quality assurance/quality control. The assessments are undocumented,
27 unreliable, and not supported by empirical studies, data, or reports.
28
29

30 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
31 supported by empirical evidence
32

33 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
34 value of parks and other public amenities and on whom ABS purported to rely, testified
35 that ABS had completely misapplied his work and dramatically overstated both the
36 distance to which economic benefits might extend from the LID Improvements and the
37 extent of any anticipated benefit within the potentially benefited area.
38
39

40 **Legal Requirement:** Actual special benefit—Must take into account potential
41 disamenities
42

43 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
44 construction, as well as other potential disamenities associated with public places.
45
46
47

1 **Legal Requirement:** Cannot prematurely commit to build

2
3 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
4 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
5 are being imposed. But finalizing the roll is a commitment by the City to build the
6 improvements, which is a violation of legal process and commits the City to build things it
7 may not secure permission to build.
8
9

10 In addition to these general objections, there are property-specific issues raised by
11 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
12 statement below.
13
14

15
16
17 **V. Standard of Review**

18 “When considering the assessment roll, the city council sits ‘as a board of
19 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
20 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
21 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
22 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
23
24

25 The proposed assessments are presumed correct, “unless overcome by clear, cogent
26 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
27 than the heightened presumption of correctness on judicial appeal because “applying these
28 elevated standards at the municipal hearing would afford unwarranted deference to a report
29 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
30 presumption is not evidence and its efficacy is lost when the other party adduces credible
31 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
32 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
33 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
34 presented credible evidence showing that the City’s proposed assessment is arbitrary,
35
36
37
38
39
40
41
42
43
44
45
46
47

1 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
2 to the City to prove the assessments are actual, measurable, special, non-speculative and
3 proportionate. The City failed that burden.
4

5 **VI. Grounds for Appeal**

6 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
7 following grounds.
8

9 **Taxpayer Not Required to Provide A Special Benefit Study**

10 1. Contrary to the Examiner's findings and recommendations, there is no
11 requirement that experts or property owners provide an alternative special benefit
12 calculation under these circumstances—to do so would also require the same improper
13 speculation the City's expert engaged in, given the timing and information provided. *See*,
14 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
15 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
16 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
17 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
18 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
19 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
20 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
21 provided expert opinion showing that improvements actually diminished value of the
22 property). In fact, no independent evidence is required at all if, for example, objectors show
23 that the assessment was grounded on a fundamentally wrong basis due to an error in the
24 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
25 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
26 a property owner could simply point out that the square footage assumed in the City's
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
2 Examiner's Recommendation: Sections II.12, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8,
3 and IV.C.11.
4

5
6
7 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**
8

9 2. RCW 35.43.040 provides cities and towns authority for ordering local
10 improvements and for levying and collecting special assessments "on property specially
11 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
12 upon all the property in accordance with the special benefits conferred thereon." RCW
13 35.44.010.
14
15

16
17 3. No analysis of general benefits. Special assessments have been "held valid
18 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
19 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
20 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
21 they are for the construction of local improvements that are appurtenant to specific land and
22 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
23
24

25 4. Taxpayer's property is not specially benefited by the LID Improvements.
26 The primary purpose and effect of the LID Improvements are to benefit "members of the
27 whole community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public
28 library is for the benefit of the members of the whole community individually and
29 collectively who may be served by it"). Mr. Macaulay's own chapter of the LID Manual
30 states clearly that appraisers should "[c]onsider general benefits as well as special benefits"
31 (Hrg. Exhibit 117 (LID Manual) at 58³) and he admits that "general benefits probably accrue
32
33
34
35
36
37
38
39
40
41
42
43
44

45
46 ³ "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
47 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil

1 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
2 that if an appraiser “identifies both general and special benefits, these benefits should be
3 clearly distinguished and explained, and only special benefits should be included in the
4 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6 183:4; P. Shorett January 30, 2020 Appraisal Review (attached to Appeal Petition) at
7 Attachment p. 15 (explaining the examples in the Final Study only provide information
8 about general benefits and Study does not use proper measure of analysis to show special
9 benefits).

10
11
12
13
14
15
16
17
18
19 5. It is undisputed that Mr. Macaulay did not analyze or measure general
20 benefits, including those arising from construction necessary to meet basic design standards.
21 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
22 construction costs related to meeting design standards which may be general benefits as
23 distinct from construction costs emanating from requirements of the LID project”). To the
24 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
25 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
26 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
27 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

28
29
30
31
32
33
34
35 6. LID Improvements not necessary. Unlike typical LID projects, the
36 Waterfront LID improvements are largely unnecessary to the functionality of any particular
37 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d

38
39
40
41
42
43
44
45
46
47

 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
 Taxpayer has attached a master list of the hearing exhibits and evidence presented as Attachment A
 to this appeal notice.

1 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
2 held invalid where owners would have benefitted equally from increase of only 9 feet);
3
4 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
5
6 intersection for new water main for hydrant held invalid because land was already afforded
7
8 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
9
10 not necessary to their hotel business, which caters primarily to business travelers attending
11
12 conventions and meetings and visiting Seattle companies. Hrg. Exhibit 114 (Decl. of Z.
13
14 Ahmed) at ¶¶ 44, 51, 52. For this reason, the Hyatt at Olive 8 does not expect the LID
15
16 Improvements to increase impact on demand for rooms or room rates. *Id.*

17
18 7. The fact that there is no case law differentiating between binary
19
20 improvements and parks does not change the law prohibiting assessments on properties
21
22 already adequately served by existing amenities. *See* Examiner's Recommendation at
23
24 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
25
26 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
27
28 reasoning excuse the City's failure to account for existing amenities as part of the special
29
30 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
31
32 the incremental effect of new park improvements on the value of properties, much like
33
34 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
35
36 (Crompton's Report) at 12-13.

37
38 8. To the extent benefits can be considered "special" as opposed to general, they
39
40 are nominal or nonexistent for many properties even in the Central Waterfront, which
41
42 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
43
44 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
45
46 change due to expansion of sewer service *near* owners' parcel which were already
47

1 connected). Even if the City could assess for a view change (and it has promised not to
2 assess for viaduct removal), the fair market value of Taxpayer's property has not changed
3 because the LID Improvements have not improved the property's waterfront view or access
4 to the waterfront, nor will they when the City anticipates completion in 2024. For these
5 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
6
7 Sections IV.C.3, IV.B.9, and IV.C.3.
8
9

10
11
12 9. No analysis of special detriments. The Final Study fails to properly account
13 for special detriments. *See Kuskys*, 85 Wn. App. at 501 (city failed to consider the costs to
14 owners for removal and cleanup of underground storage tanks discovered during the
15 improvement project). Although Mr. Macaulay claims he analyzed impacts on the City's
16 planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation
17 of how lost parking might be a detriment, and no property-specific parking analysis in any
18 of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg.
19 Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
20
21

22
23 10. Likewise, there was no analysis of the risks associated with disamenities such
24 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
25 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
26 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
27 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
28 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
29 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.⁴ And if
30
31

32
33
34
35
36
37
38
39
40
41
42
43
44
45 ⁴ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
2 the maintenance agreement. *Id.* at 13:4-14:2.

3
4 11. There was also no consideration of negative impacts from another four-plus
5 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
6 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
7 law allowing him to dismiss these actual, non-speculative impacts. Because future special
8 benefits calculations are inherently speculative, Washington’s eminent domain statute
9 specifically allows condemnees to postpone special benefits assessments until improvements
10 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
11 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
12 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
13 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
14 Greenway, the Greenway district “significantly” lagged in value).
15

16 12. Meanwhile, Mr. Ahmed testified that the assessment is an immediate expense
17 for the Hyatt at Olive 8 that comes with no immediate increase in revenue, thereby
18 decreasing property values. *See* Hrg. Exhibit 114 (Decl. of Z. Ahmed), ¶ 52. Mr. Ahmed
19 further testified that the Hyatt at Olive 8 will receive no special benefit from the proposed
20 improvements, and in fact the property is more valuable without the proposed LID
21 improvements and the corresponding assessment. *Id.*, ¶¶ 53, 54. For these reasons,
22 Taxpayer appeals the following portions of the Examiner’s Recommendation: Sections
23 II.25, IV.B.8, and IV.B.9.
24

25 13. Special benefit estimate is speculative. When calculating a special benefit,
26 “[f]air market value cannot include a speculative value.” *Bellevue Plaza, Inc.*, 121 Wn.2d at
27 411. “When an appraiser uses a factor ‘beyond the knowledge of reasonable certainty’, it
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp. 6097*, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4 14. Assuming without conceding that one day, the City’s planned LID
5 Improvements might increase the value of neighboring properties to some extent, that
6 potential benefit is many years away and speculative. While appraisers tolerate some degree
7 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
8 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
9 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
10 the level of precision implied in the Final Study due to the size of the LID and use of
11 hypotheticals).
12
13
14
15
16
17
18
19

20 15. Although LIDs are sometimes finalized prior to completion of improvements,
21 this is typically just six month or a year prior, and the assessments are otherwise supported
22 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
23 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
26 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
27 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
28 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
29 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
30 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
31 market value would be as of the date the project would be finally constructed” because
32 “[t]here could be a lot of elements in the market that did occur between now and then that
33 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
2 fluctuate over time” and “I can’t predict the future”).

3
4
5 16. The record is clear that while no one can know what “special benefit” might
6 accrue to these properties in four years (if any), we do know that there are no actual benefits
7 now. The LID improvements provide no immediate special benefit to property owners
8 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
9 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
10 sewer system for future users). For example, notwithstanding the questionable hypothesis
11 that hotels will benefit from an expected increase in tourism (higher room rates or
12 occupancy) when the improvements are complete, it is undisputed that tourists are not
13 coming in larger numbers and paying higher room rates now because of something
14 happening five years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23;
15 O’Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased today for 18
16 months would rent at a higher rate due to improvements coming in 2024).

17
18
19 17. Further, there are no “plans and specifications” on file with the Clerk’s Office
20 for the LID Improvements, and it is unlawful to move to final assessments without such
21 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
22 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
23 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
24 dollars on projects still early in the design process. *See* Washington Attorney General
25 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
26 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
27 of programs and included “only so much of the overall costs” that took place within and
28 benefitted the assessed properties).

1 18. The COVID-19 crisis highlights how fundamentally speculative and unfair it
2 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
3 anticipated to be delivered five years later. Even before COVID, it was speculative to
4 assume that market highs experienced in October 2019¹ would be sustained through 2024,
5 after an already extraordinarily long expansion period. *See, e.g.*, 3/3/2020 (A. Gibbons)
6 Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing
7 my analysis in October 2019, who would have thought that this COVID issue would
8 happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought
9 process was that the market was going to continue to go up”—in fact, it did not for
10 Taxpayer’s property. *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that
11 downtown hotel values had already dropped an estimated 10-15% from their October 2019
12 levels, and occupancy rates were at zero or in single digits. *See* Gordon Decl. (dated
13 4/21/2020) at ¶ 9. Hotels without guests will derive no benefit, special or otherwise, from
14 the planned LID Improvements. And even assuming hotels recover prior to 2024, there is
15 no basis for assuming that values hypothesized in October 2019 will remain relevant; they
16 are already irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020).
17 Although COVID does not change actual values as of October 2019 (*see* Examiner’s
18 Recommendation at 109), the pandemic has impacted *current* values and rendered the
19 hypothetical October 2019 Final Study valuations outdated.

20 19. As another example of how future events could affect the accuracy and
21 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
22 Examiner re-open the record to allow the City to explain whether the assessments against
23 property owners within the LID are, in fact, being used by the City to fund the emergency

1 dismantling and reconstruction of Pier 58.⁵ It has been reported that the City plans to use
2 LID funding to pay for the expedited, emergency repairs and replacement.⁶ If true, the City
3 would be improperly imposing costs on property owners within the LID for improvements
4 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
5 habitat and City infrastructure—this does not provide any special benefit to LID property
6 owners.
7
8
9
10
11

12 20. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
19 potential delays and project changes inherent in those processes, that call into question the
20 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110

2 Decl., dated 4/15/2020).
3

4
5 21. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
6 he could not point to a single one where the assessment roll was finalized five years in
7 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
8 he has never recommended final special assessments based on designs less than 30 percent
9 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
10 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
11 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
12 at 66:17-25. He performed no independent due diligence to determine the reliability of the
13 City’s estimates for completion of the LID Improvements, or to ensure that proposed
14 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
15 agreed that if any of his assumptions are incorrect, his opinion of market value would need
16 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
17 68:11-18.

25
26
27
28
29

30 22. The City has cited no authority—and Taxpayer is aware of none—that
31 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
32 assess taxes for “actual” special benefits that will not accrue for another five years (if all
33 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
34 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
35 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
36 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
37 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
38 IV.C.14, and IV.C.18.
39
40
41
42
43
44
45
46
47

1 23. Failure to discount special benefit estimates to account for risks and present
2 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
3 have accounted for risks associated with delivery of the improvements (including permitting
4 risk, construction risk, general economic risk) and any special damages associated with
5 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
6 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
7 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
8 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
9 the impact of future conditions [through] discounted cash flow analysis.").

10 24. Mr. Macaulay acknowledged that appraisers can discount the value of a
11 future condition not in place at the date of valuation and can discount for the time value of
12 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
13 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
14 Discounting would also have been consistent with his approach for analyzing special
15 benefits to vacant land. He testified that the difference between similarly situated vacant
16 sites slated for development and already developed sites was that the labor, capital and risks
17 associated with development had not yet been borne for those vacant sites. Therefore, the
18 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
19 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
20 fully permitted, has not completed environmental review, and has not reached full design is
21 presently worth significantly less.

22 25. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
23 present value, an appraiser would consider discount rates for land development to account
24 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at

1 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
2 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
3 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
4

5
6 26. Applying the Q19 Korpacz rates and assuming arguendo that Macauley's
7 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
8 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
9 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
10 ignoring momentarily all of the other methodological and other flaws discussed here and in
11 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
12 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
13 exceeds special benefits when reduced to present value. Further, to the extent the City is
14 arguing that because they are permitted to assess 100% of the special benefit, the special
15 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
16 is again wrong. After applying proper discounting, the City's proposed special benefit
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18 100% of the total estimated special benefit.
19
20

21 27. But even the assumption that the LID improvements would deliver benefits
22 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
23 on. Rather, those studies demonstrate that a discount period of five years is conservative.
24 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
25 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
26 indicates that during the construction period, the Greenway district "significantly" lagged in
27 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
28 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
29
30
31
32
33
34
35

43
44
45
46
47

1 30-31 (discussing New York City High Line and San Francisco Embarcadero
2 improvements). Given the lengthy delay, any prediction of future special benefits is
3 speculative, especially during the construction phase where values are likely to decline.
4
5 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
6
7 Improvements take a similarly long period of time after they are complete to start producing
8
9 tangible property value benefits, each additional year of delay results in further discount to
10
11 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
12
13 A.
14
15

16
17 28. Applying the same discounting methods described above and in Mr. Gibbons
18
19 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
20
21 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
22
23 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
24
25 100% assessment should be no more than \$176,436. Anything more would permit the City
26
27 to assess Taxpayer based on a hypothetical assumption that these improvements are in place
28
29 and providing benefit, and ignore the risks, construction disamenity, and time value of
30
31 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
32
33 would counsel that the assessment should be only 39.2% of that assessment cap, or \$69,163.
34

35 29. Attachment C includes two Excel spreadsheets applying these discounting
36
37 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
38
39 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
40
41 demonstrates that discounting the City's hypothetical October 2019 special benefits to
42
43 present value would reduce Taxpayer's assessment to \$251,786, exclusive of any other
44
45 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
46
47 reductions after taking into account: (1) Taxpayer's experts' estimated "Before" value based

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
5 the time it takes for the improvements to capture property value). After such reductions,
6
7 Taxpayer's assessment would be just \$138,935 (for the 5-year discount) or \$38,175 (for the
8
9 10-year discount). Further, the spreadsheet concludes a "zero" benefit for this property
10
11 because, based on Dr. Crompton's testimony, Taxpayer's property is more than 2,000 feet
12
13 from the core "park" improvements and therefore too distant to receive any special benefit.
14
15 Neither of these spreadsheets address other issues raised by Taxpayer's appeal, but are
16
17 intended to help demonstrate how unfair and inflated the City's proposed hypothetical
18
19 assessment is. The Hearing Examiner's Recommendation simply dismisses Taxpayer's
20
21 discounting argument without legal or factual analysis; that failure is error.
22
23

24 **Appraisal and Assessment Calculation Methods Are Flawed**

25
26 30. The "general rule is that each lot, piece, or parcel of land should be assessed
27
28 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
29
30 Wn.2d at 97.
31

32
33 31. It is proper to sustain a challenge to an assessment, even without the appraisal
34
35 testimony from the owner, where the objector's expert establishes that the assessment was
36
37 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
38
39 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
40

41 32. The City's appraiser purports to utilize the income method of valuation but
42
43 relied on inaccurate revenue and market data, as discussed further below.
44

45 33. The City's appraiser purports to utilize the comparable sales method of
46
47 valuation, but no City witness attempted "to characterize any one, or all of them, as

1 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
2 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
3 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
4 characterize any one, or all of them, as comparable to any particular property within the LID").
5 And no City witness could explain how specific adjustments were made to these sales to
6 account for value increases due to the hypothesized Before and After Improvements. For this
7 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
8
9

10
11
12
13
14
15 34. Special assessment improperly includes value lift from the Before
16 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
17 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
18 Improvements, which WSDOT had independently committed to fund. However, Mr.
19 Macaulay did not calculate the actual market value of LID properties in October 2019, and
20 did not separately analyze the hypothetical increase to property values attributable to
21 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
22 current value and then separately calculate a hypothetical "With WSDOT" Before value);
23 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
24 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
25 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
26 documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
27 occupancy and rates would have been for the commercial properties assuming all of the
28 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
29 outright omission precludes any independent evaluation of the true market "Before" values.
30 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
31 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
2 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
3
4 other road, pedestrian and landscaping improvements WSDOT had already committed to
5
6 make.
7

8
9 35. However, because Mr. Macaulay testified that he did include some WSDOT-
10 related value-lift in the “Before” values, it follows that part of the special assessment
11
12 improperly is based on value attributable to the WSDOT Improvements. As shown by
13
14 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
15
16 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
17
18 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
19
20 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
21
22 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
23
24 to properly exclude the value of Before Improvements from the assessments. For these
25
26 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
27
28 Sections II.16, II.19, II.29, and IV.B.11(a)(ii)
29

30
31 36. Special benefits were assigned rather than measured. Mr. Macaulay
32
33 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
34
35 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
36
37 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 3/3/2020 (A. Gibbons) Hrg Tr. at
38
39 88:25-89:3; 90:8-91:13. Based on formulas in spreadsheets that Mr. Macaulay used to
40
41 analyze the commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based
42
43 adjustments on hypothesized very small increases to property revenue and very small
44
45 reductions to cap rates to “calculate” an “After” value due to the coming 2024 LID
46
47

1 Improvements. Attachment B (ABS Spreadsheet). These series of micro adjustments were
2 based on “professional judgment” that are neither shown nor replicable.
3

4
5 37. For these reasons, Taxpayer appeals the following portions of the Examiner’s
6 Recommendation: Sections II.19 and IV.B.11(a)(iii).
7

8
9 38. Special benefit falls within margin of error. The Final Special Benefit Study
10 applies an estimated value enhancement of less than 4%, which is generally within the
11 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
12 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
13 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
14 of one another, this difference is considered reasonable as it falls within the standard margin
15 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
16 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay’s micro-special benefit
17 percentages fall far below that 5% margin, “there is no way of authenticating” such
18 incremental changes because “[m]arket forces completely obliterate any tiny little noise
19 factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
20 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25.
21 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
22 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
23 appraiser to discern the micro-value differences between hypothetical conditions that are so
24 similar (the WSDOT improvements compared to the LID improvements) “verges on being
25 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
26

27
28 39. Even if it were possible to accurately tease out such a miniscule hypothetical
29 value change due to improvements coming five years later, experts testified that there is no
30 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at
2
3 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 40. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 41. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁷ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 42. Special assessment is not supported by comparable studies, data or reports.
25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for the commercial properties, including Taxpayer’s
30 property. For example, although Mr. Macaulay stated that no single report or study was
31
32
33
34
35
36
37
38
39

40
41 ⁷ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
2 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
3 parcel-by-parcel analysis other than to say that the studies generally provided “some
4 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
5 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
6 similarities and differences between these improvements and the comparable parks he
7 looked at).

14 43. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
15 assignment of incremental increase of 0.5% to 4% to property values within the LID.
16 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
17 research misinterprets his work in critical ways, including because the LID Improvements
18 manifest the characteristics of a parkway (not a park), and his research indicates that most of
19 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
20 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
21 related value increases are in fact smaller; that estimated increases are “best guesses” rather
22 than predictions of property value increases in a particular city; and that percentages do not
23 account for diminishing returns after taking into account water views, which would be the
24 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
25 topography grants most properties in downtown a water view.

38 44. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
39 that this was just one source of information that was not entirely relevant because, among
40 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
41 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
42 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3 Crompton concluded that 500 feet via road from “park” improvements is just one or two
4 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
5 significantly beyond that which the park study indicated (even if it was legitimate to use the
6 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
7 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
8 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
9 Taxpayer’s property is not even within 2,000 road network feet from the “park”
10 improvements. *See* Hrg. Exhibits 104 (Ellen Kersten Decl.) at Exs. E, F; 114 (Decl. of Z.
11 Ahmed) at ¶ 50.

12 45. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
13 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
14 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
15 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
16 materials, it was clearly an important—if not *the* most important—source of information for
17 estimating special benefits (especially with respect to the condos).⁸ No City witness
18 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
19 parcel-by-parcel analysis.

43
44
45
46
47

⁸ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr. at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a park (or streetscape) improvement—other studies estimated premiums for real estate only much closer or cited to Dr. Crompton.

1 46. The destination parks discussed in the Final Special Benefit Study do not
2 provide reliable, comparable, and valid support for the calculation of special assessments
3 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
4 critique of every case study cited concludes the changes to those “dwarf the difference
5 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
6 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
7 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
8 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
9 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
10 funded by a LID. And in virtually all of those cases, the park improvements dramatically
11 restored unimproved or blighted areas, and properties evaluated were within two or three
12 blocks of the park.
13

14 47. ABS’s claimed reliance on three economic studies to support property value
15 increase is also flawed. The HR&A study does not inform what value increases are
16 expected from the LID Improvements because it projects increases to tourism from *all* of the
17 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
18 dissimilar parks in other cities,⁹ making the methodological application to the LID
19 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
20 conclusion that there would be *no new net visitors* from downtown residents as a result of
21

22 ⁹ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
23 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
24 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
25 expected tourists visiting the LID park was calculated using data from only from New York City, a
26 notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to
27 increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to
28 how hotel visitors actually select hotels to stay in.
29

1 the LID Improvements and could not explain how this impacted his condo analysis.
2
3 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
4 Property Values” primarily focused on whether the benefits accrue to the larger community
5 rather than properties adjacent to the park. And the 2014 New York City Department of
6 Transportation study is not based on real estate transactions and market sales and fails to
7 substantiate any link between increased retail sales and property values. Moreover, this
8 study only looked at impact either directly abutting the streetscape improvement, or a couple
9 hundred feet for plaza-like improvements.
10

11
12 48. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
13 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
14 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
15 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
16 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
17 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
18 asked whether he considered that HR&A’s estimated LID impact is six times greater than
19 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
20 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
21 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
22 assumptions to account for this difference, which may be partly explained by the fact that
23 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
24 approximately 3.44% of King County tourists visit Seattle primarily because of the city
25 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
26 waterfront improvements.
27
28

47

1 49. Although proximity to the improvements is a key factor in all of these
2 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
3 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
4 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
5 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
6 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
7 Improvements is approximate 20 acres and it is not a community park.¹⁰

8 50. There is no explanation in the Final Study or the supporting materials of how
9 the studies or comparable sales were used to derive values for Taxpayer's property. For
10 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
11 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

12 51. Failure to comply with USPAP. Taxpayer's assessment also rests on a
13 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
14 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
15 recognized) for developing the MAI standards for mass appraisals, testified that the Final
16 Study does not meet mass appraisal standards nor allow for independent assessment of the
17 accuracy of Mr. Macauley's conclusions.

18 52. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
21 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's

22 ¹⁰ *See*
23 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
24 connecting Seattle's central waterfront to downtown.").

1 testimony suggests that he incorrectly believed that the only difference between direct
2 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
3
4 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
5
6 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
7
8 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
9
10 Gordon uses in doing his limited restricted report”).
11

12
13 53. But the difference is not only in reporting—mass appraisal techniques must
14
15 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
16
17 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
18
19 parcel approach:

20
21 The mass appraisal technique is an appraisal method used to evaluate
22
23 a group of properties that are subject to similar market forces as of a
24
25 certain date through the use of market data, statistical analysis and
26
27 testing. As a result, the mass appraisal technique does not require or
28
29 involve analysis of each individual property’s specific data.

30
31 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).

32
33 54. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
34
35 universe of properties as a given date using standard methodology, employing common data,
36
37 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
38
39 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
40
41 model” is “a mathematical expression of how supply and demand factors interact in a
42
43 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
44
45 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
46
47 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

1 55. Regardless of client direction, Mr. Macaulay is required to comply with
2
3 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
4
5 economically feasible because it would have taken “an incredible amount of time and cost”
6
7 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
8
9 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
10
11 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).

12 56. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
13
14 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
15
16 value, fails to calibrate the model structure to determine the contribution of the individual
17
18 characteristics affecting value, and does not review the mass appraisal results against actual
19
20 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
21
22 217:1;¹¹ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

23 57. Mr. Macaulay explained that factors like “aesthetic change in the area, the
24
25 proximity to the elements, the increase in market rent, market vacancy changes,
26
27 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
28
29 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
30
31
32

33
34 ¹¹ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
35 relationship between characteristics that affect value, and to calibrate that model to specify how
36 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
37 21). The purpose is to rationally determine what characteristics will create value, and by how much.
38 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
39 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
40 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
41 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
42 include explanation of the model specification, data requirements, calibration methods, and
43 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
44 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
45 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
46 Hrg. Tr. at 206:15-207:17.
47

1 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
2 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
3 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
4 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
5 values were hypothetical, it was not possible to identify matched pair sales and no City
6 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
7 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
8 requires him to explain his model structure.
9

10
11 58. For these reasons, Taxpayer appeals the following portions of the Examiner’s
12 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
13 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
14 and appeals the Examiner’s denial of that motion.
15

16
17 59. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, the Hyatt at
21 Olive 8 is more than a 3/4 of a mile walk—approximately 2,700 feet as a crow flies—from
22 Pier 58 and the core “park” improvements. Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 50.
23 And, as described above, the special assessment is overstated because the Final Study makes
24 no attempt to determine general benefits, existing amenities for Taxpayer’s specific
25 property, or special detriments. In addition, it is speculative due to the fact that, as of
26 October 2019, improvements were not in place—and, in fact, much of the waterfront is a
27 construction zone following removal of the viaduct and now Pier 58 demolition. Under
28 these circumstances, rather than relying on entirely imaginary income and shaky
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 hypotheticals, Mr. Macaulay at the very least should have discounted the special benefit
2 estimates or waited to perform the Study until the improvements were at least close to
3 complete.
4
5

6 **Erroneous Pre-Improvement Valuation**

7
8
9 60. The proposed final assessment erroneously overstates the pre-improvement
10 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
11 benefit to the Taxpayer's property.
12

13
14 61. The City's Final Study was used to compute the proposed final assessment of
15 Taxpayer's property. The City's Study purportedly uses data from the King County
16 Department of Assessments,¹² but the pre-improvement valuation information in the Final
17 Study does not accurately reflect this data. For example, the City's Study values Taxpayer's
18 property at \$187,443,000 as of October 1, 2019. However, the King County assessor
19 determined the true and fair value of the property to be \$152,046,700, valued in 2019 for tax
20 year 2020. In other words, the Final Special Benefit Study's valuation is 123% of King
21 County's assessed value. The Final Special Benefit Study does not explain this difference—
22 or any differences—between its pre-improvement valuation and its supposed source for
23 market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
24 Recommendation.
25
26

27 62. Further, the City's analysis was based on unreliable market data. For the
28 hotels, Mr. Macaulay's decision to rely on inaccurate market data notably deviates from
29 standard appraisal practices because more reliable data in the form of STR reports are
30
31
32
33
34
35
36

37
38
39
40
41
42
43
44
45 ¹² See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet
46 (providing a "County Link" to the King County Department of Assessment's online "eReal
47 Property" search tool).

1 readily available. Examiner Recommendation at Section IV.C.10; 3/12/2020 (J. Gordon)
2
3 Hrg. Tr. at 196:5-197:12; 215:9-18. Without the STR reports or actual input from the hotels,
4
5 Mr. Macaulay's "Before" valuations are drastically overstated in large part because he relies
6
7 on publicly available "room rack rates" to estimate hotel income. *See id.* (J. Gordon) at
8
9 162:3-18; 170:16-171:13; 179:25-180:14; 192:15-22. As the Examiner found, "Mr. Gordon
10
11 is a specialist expert in appraising hotels and his expert opinion, in addition to the specific
12
13 information he relied on for that opinion, is superior to the opinion and supporting data of
14
15 the City in its valuation." Examiner's Recommendation at II.16. The Examiner concluded
16
17 that Mr. Gordon's valuations were more reliable "due to the specialist nature of Mr.
18
19 Gordon's background and the specificity of the valuation data upon which he relied"—
20
21 namely STR reports or actual revenue data from the hotel. *Id.* at IV.C.10. Therefore, "the
22
23 valuation of [this] property should be remanded for recalculation by the City appraiser based
24
25 on the information provided by [this] Objector." *Id.*

26
27 63. Specifically, the evidence and testimony presented showed that the actual
28
29 average daily room rate (ADR) for this property in 2019 was \$225. However, Mr. Macaulay
30
31 incorrectly estimated an ADR of \$335 for this property which is 49% higher than actual
32
33 ADR, far exceeds the most optimistic assumptions about future growth in hotel room rates
34
35 for the Hyatt at Olive 8, and is not a reasonable assumption in valuing a hotel of this type in
36
37 the downtown Seattle market. Additionally, the Hyatt at Olive 8 has significantly reduced
38
39 operations as a result of the COVID-19 outbreak.

40
41 64. Due to these errors alone, Mr. Macaulay artificially raised the property's
42
43 Before value; Mr. Gordon valued the property at \$118,200,000 (without personal property),
44
45 which is \$67,243,000 (or about 37%) less than ABS Valuation's estimate. Setting aside that
46
47 ABS Valuation's inclusion of personal property when valuing hotels is disproportionate and

1 flawed, Mr. Gordon's estimate of value including personal property is \$123,400,000, which
2 is still significantly lower than ABS Valuation's estimate (\$187,433,000). *See* Fourth Decl.
3 of Gordon, at ¶ 5 (dated 7/7/2020).
4

5
6 65. Taxpayer expects an opportunity to respond to the revised assessment once
7 that is provided (*see* Examiner's Recommendation at V) and appeals the remainder of
8 Section IV.C.10 of the Examiner's Recommendation rejecting Taxpayer's other bases for
9 reducing the assessment. For example, Taxpayer disagrees with the Examiner's conclusion
10 that one of the reasons Mr. Gordon's appraisals concludes a lower value for this property is
11 because he was not valuing the properties in the "Before" condition. Examiner's
12 Recommendation at Section II.16. This does not explain the 49% difference between ABS
13 Valuation's estimate and actual average room rates for the Hyatt at Olive 8. Further, Mr.
14 Lukens—who reviewed ABS's valuation estimates for reasonableness—was not even aware
15 that the Before values were supposed to include the WSDOT Improvements. 6/26/2020
16 Hrg. Tr. at 165:2-166:22.
17

18
19 66. Thus, aside from multiple other reasons why computation of the special
20 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
21 improvement values that do not accurately reflect market data. For these reason, Taxpayer
22 appeals Section II.16 of the Examiner's Recommendation.
23
24

25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47

Erroneous Computation of Special Benefit

67. "Special benefit" is "the increase in fair market value attributable to the local
improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
may receive by reason of the improvement is not measured alone by the physical character
or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is

1 the particular tract or property benefited by the entire improvement, and is it assessed
2 proportionately with the other property included within the assessment district?” *Id.* 165–
3
4 66.

5
6 68. The proposed final assessment erroneously overstates the special benefit of
7
8 LID improvements in a number of ways.
9

10 69. Overstated Before value led to overstated special benefit. ABS Valuation’s
11 overstated Before value resulted in an inflated special benefit estimate and assessment after
12
13 Mr. Macaulay made micro adjustments to “Before” revenue and capitalization rates to
14
15 calculate an After value. Mr. Macaulay conceded that using his methods and his
16
17 spreadsheets, changing the room rate alone would change the special assessment. 6/25/2020
18
19 Hrg. Tr. at 42:21-43:15 (explaining that changing the room rate will result in a different
20
21 assessment and the same is true for every hotel); *see also* 6/23/2020 Hrg. Tr. at 111:9-11,
22
23 132:12-133:10, 140:20-141:9. And he agreed that if Mr. Gordon’s numbers are accurate—
24
25 and there is no evidence they are not—then ABS would need to redo the appraisal for the
26
27 Hyatt at Olive 8 to determine if adjustments are needed. *Cf. id.* 109:17-110:2 (discussing
28
29 the Hyatt Regency), 137:20-138:13 (discussing Grand Hyatt).
30
31

32 70. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
33
34 the Hyatt at Olive 8, Mr. Macaulay assumed room/rental rates would increase by 0.45%
35
36 (low) and 0.85% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it
37
38 is not possible to accurately conclude that the reason for this level of percentage increase
39
40 would be due to the LID Improvements, and there appears to be no support for assignment
41
42 of these percentages. Based on formulas in the spreadsheets, Mr. Macaulay then uses these
43
44 same percentages (0.45% and 0.85%) to increase food and beverage revenue, and parking
45
46 and other income. He then uses this hypothesized increased revenue to calculate a new net
47

1 operating income for the commercial properties and capitalizes that to come up with an
2 “After” valuation.
3

4
5 71. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
6 operating income remains the same as in the hypothetical “Before” condition, but changes
7 the cap rate. For the Hyatt at Olive 8, the cap rate goes from 7.50% to 7.40% (low scenario,
8 creating a bigger value increase) and 7.45% (high scenario, creating a lower value increase).
9 Mr. Gordon likewise explained that cap rate changes of 0.10% or 0.05%% are not typically
10 measurable, and there appears to be no support for these changes in the Final Study or any
11 of its supporting materials.
12
13

14
15 72. Mr. Macaulay then averages his four “After” values to arrive at a final special
16 benefit conclusion. For the Hyatt at Olive 8, this is an increase in property value of 1.00%
17 due to the LID Improvements.
18

19
20 73. Mr. Macaulay offered little justification for his micro adjustments to revenue
21 and capitalization rates. When asked precisely what the basis is for his special benefit
22 percentage increases to revenue for each commercial property, he could not point to
23 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
24 is nothing in the report to allow a reader to understand how he came up with these
25 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
26 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
27 the basis for his belief that certain factors—liked increased connectivity—will increase
28 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
29 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
30 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
31 sources equally even though there was no separate analysis done for food and beverage or
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
2 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
3 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
4 properties.
5
6

7
8 74. When asked the basis for making such adjustments, Mr. Macaulay pointed to
9 “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7 (“Mr. Lukens helped
10 significantly in that regard in helping, you know, look at probable adjustments”). However,
11 Mr. Lukens testified that he did not review the percentage increases. *See* 6/25/2020 Hrg. Tr.
12 at 170:24-172:20.¹³ And he did not review any work or data to determine whether the
13 revenue percentage adjustments in the spreadsheets were reasonable, nor did he ever find
14 them to be unreasonable or suggest any changes. *Id.* at 172:3-20. Instead, he appeared to be
15 considering them for the first time on cross examination, testifying that the adjustments
16 “appear to be a kind of sensitivity analysis” and “appear to be a very minor change.” *Id.* at
17 170:18-172:13. Likewise, he had no understanding of what factors went into determining
18 the change in capitalization rates in the spreadsheets. *Id.* at 173:23-174:1. And he did not
19 know how ABS Valuation reconciled the four scenarios to come to final estimated special
20 benefit. *Id.* at 174:22-175:4.
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38 ¹³ As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different
39 special benefit and capitalization rate increases to the parking and retail parcels associated with the
40 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
41 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special
42 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
43 parcels). When asked whether this was a matter of coincidence, his answer was that is “just our
44 estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
45 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
46 though it is one block closer to the waterfront.
47

1 75. Mr. Macaulay testified that he used comparable sales as a reasonableness
2 check for commercial properties. But as explained above, no City witness has explained
3 how anyone, or all, of the sales are comparable to any particular commercial property within
4 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
5 in order to make sales “comparable,” he would have had to make adjustments to account for
6 Before and After conditions, but there is no way to understand how adjustments were made
7 because he “didn’t do a separate sales comparison approach where we showed adjustments
8 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
9 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
10 *Id.* at 127:10-128:24.

21 76. It also bears noting that any “internal review” of the special benefit estimates
22 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
23 error. Indeed, given all the same information, he seemed to suggest that it would be
24 perfectly reasonable for another experienced appraiser to come up with special benefit
25 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
26 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
27 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
28 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
29 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
30 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
31 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
32 *Recommendation* at IV.B.4. Thus, the special assessment is not actual, measurable or
33 special because it is arbitrarily assigned; and it is too small to realistically be supported by
34 appraisal techniques.

1 77. No evidence of special benefit. Meanwhile, there is “no actual evidence from
2
3 any seller or purchaser that the price was higher because of the LID improvements.”
4
5 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
6
7 identified any seller or buyer, or any particular property where the existence of the LID
8
9 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
10
11 explained that the property has not increased rental rates or revenue due to the forthcoming
12
13 LID Improvements, because, among other reasons (and apart from COVID), the
14
15 improvements ABS believes will generate value do not exist, and will not for a number of
16
17 years to come. There are no comparable sales because the LID Improvements are not in
18
19 place, nor will they be until the end of 2024 if completed on schedule. Notably, this
20
21 property is further than 2,000 feet from the core waterfront improvement, making any basis
22
23 for finding a special benefit extremely tenuous given Dr. Crompton’s testimony and reports.

24 78. The fair market value of Taxpayer’s property has not changed due to
25
26 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
27
28 benefited from installation of new water main and fire hydrant where it was already
29
30 adequately supplied with water and afforded adequate fire protection). And in any event,
31
32 any value attributable to removal of the viaduct was to be excluded from the assessment
33
34 calculation.

35
36 79. There is no special benefit because LID improvements in fact diminish the
37
38 value of Taxpayer’s property by drawing visitors away towards improvements that do not
39
40 abut the property. *See Kusky*, 85 Wn. App. 493 (testimony of owners’ expert that LID
41
42 actually diminished value of property was sufficient to rebut presumption that assessment
43
44 was proper).

1 80. Moreover, the assessment formula is an attempt to distribute costs that do not
2 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
3 “merely a mathematical model that distributes costs”).
4

5
6 81. The Special Benefit Study fails to address whether the \$346,000,000
7 estimated LID project cost takes into account the investment that would have occurred in the
8 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
9 invested. This is a critical component of estimating which properties receive a direct benefit
10 from the improvements, versus more incidental benefits further from the park.
11

12 82. Assessments are disproportionate. Taxpayer also presented evidence
13 showing that the assessments are disproportionate. For example, the City disproportionately
14 assessed hotels a greater percentage of the cost of the Improvements even though there no
15 evidence that hotel properties will in fact benefit. And even within the hotels, the
16 assessments are disproportionate. Mr. Gordon testified that the differences between the
17 special benefit increases for the Hyatt at Olive 8, the Grand Hyatt, and Hyatt Regency—
18 which are all very close together—made little sense and raised doubts as to proportionality.
19

20 83. Mr. Macaulay also included personal property in his valuation of hotels even
21 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
22 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
23 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
24 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
25 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
26 receiving a disproportionately high LID assessment in comparison to other property types,
27 since hotels were the only property type subject to personal property LID assessments.
28
29 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
2 notice procedures because hotel property owners only received notice that their real estate
3 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
4

5
6 84. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
7 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
8 a television at the waterfront Marriott is assigned a greater special benefit than the same
9 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
10 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
11 unreasonable to assign a value lift to personal property that is replaceable at the same cost
12 and may be obsolete before the LID improvements are even completed. *See* Second Decl. of
13 Shorett ISO Closing Stmt., ¶ 7 (dated 7/7/2020). Further, personal property is highly
14 depreciable, and likely to be fully depreciated or potentially discarded by 2024. *Id.*; *see also*
15 Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must be redone to correct
16 for this error.
17

18
19 85. The only evidence the City provided specific to this property was to rebut
20 Mr. Gordon's "Before" valuation. But the Hearing Examiner has already found that Mr.
21 Gordon's valuation is more reliable. The remainder of the City's evidence and testimony
22 regarding this property provides general responses which have already been rebutted by
23 Objectors in their case-in-chief and cross-examination. Second Decl. of Bird (dated
24 6/26/2020), at ¶¶ 97-103.
25

26
27 86. The proposed final assessment substantially exceeds the special benefit to the
28 property and is grossly disproportionate to similarly situated properties within the LID. For
29 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
30 Sections II.17, II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.10.

47

State Environmental Policy Act and Other Environmental Permitting

87. While this appeal is not challenging the City's environmental review and permitting processes, those processes are relevant in determining the legality of the assessments, and to assessing the delivery risk, the present value of the City's plans, and ultimately the amount of the assessment. If the roll is finalized, the City will commit to pursue projects that have not yet undergone environmental review (thus limiting the choice of reasonable alternatives to those projects). For example, if the roll is finalized, the City is committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63) is just beginning. Further, the City has segmented environmental review, and still has a gauntlet of federal, state and tribal review processes to complete before it will be clear what the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b), SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and committing to reconstruction of Pier 58 and major street improvements without environmental review, or the City's Final Special Study has improperly included and is proposing to assess the Taxpayer the costs and special benefits of improvements that may not get built. Either way, it is faulty process.

Due Process Rights

88. The City's failed to notify Taxpayer sufficiently in advance of the hearing to allow Taxpayer to obtain evidence and prepare to properly challenge the assessments. Because LID assessments involve a deprivation of property, affected owners have the right to a hearing as to whether the improvement resulted (or will result) in special benefits to their properties and whether their assessments are proportionate, which necessarily includes

1 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
2 555, 569–70, 229 P.3d 761 (2010).

3
4 89. The LID statute specifies that cities must mail notices giving the time and
5 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
6 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
7 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
8 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
9 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
10 secure their own appraisal), evaluate proportionality of the proposed assessments, and
11 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
12 for anybody to get an appraisal”).

13
14 90. The City’s Notice of Assessment was sent on December 30, 2019. And the
15 Final Special Benefit Study has only been available for public review since January 7, 2020.
16 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
17 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
18 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
19 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
20 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
21 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
22 the Examiner’s Recommendation: I.B.

23 **VII. Relief Requested**

24 Taxpayer respectfully requests that the City Council:

- 25 1. Cancel the Waterfront Local Improvement District No. 6751 proposed
26 final assessment dated December 30, 2019; or
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
2
3 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the
4
5 hearing in this matter; or

6 3. Grant the Examiner's recommended remand but with instructions recalculate
7
8 and reduce Taxpayer's assessment using recognized appraisal techniques consistent with
9
10 USPAP and

- 11 a. Excluding any property value increase attributable to viaduct removal and
12
13 other planned WSDOT Improvements;
14
15 b. Excluding any value attributable to personal property;
16
17 c. Taking into account the effects of the COVID-19 pandemic on the value of
18
19 Taxpayer's property and other relevant developments since October 2019;
20
21 d. Accounting for and excluding (1) any special benefits from existing or
22
23 planned improvements that already provide similar benefits to Taxpayer's
24
25 property, and (2) any special detriments from construction and other
26
27 anticipated LID-related disamenities;
28
29 e. Accounting for and including only those actual benefits anticipated to accrue
30
31 to Taxpayer's property based on its location relative to Pier 58, Overlook
32
33 Walk, and the Promenade, and specific elements of the LID Improvements;
34
35 f. Discounting anticipated special benefits to present value, based on reliable
36
37 estimates regarding when special benefits will start accruing following
38
39 completion of the LID Improvements; and
40
41 g. Accounting for such other issues specific to Taxpayer's property relevant to
42
43 calculation of such assessment; and
44
45

46 3. Grant such further relief as the City Council deems just and proper.

24
25
26 **III. Statement of Hedreen LLC's Interest and Incorporation of Prior Arguments**

27 HEDREEN LLC is the taxpayer for the property that is subject to the proposed final
28 assessment described in Section IV.
29

30
31 Hedreen LLC is amending its appeal as authorized in City of Seattle Resolution
32 31979 to include additional arguments relevant to the revised Final Recommendations of the
33 Hearing Examiner issued on February 1, 2021. On February 4, 2020, Hedreen LLC timely
34 filed an objection to the assessment, which was based on the Final Study. Hedreen LLC
35 further timely filed an appeal of the Hearing Examiner's 2020 recommendations to the City
36 Council. Hedreen LLC maintains and incorporates all objections and arguments raised in its
37 appeal filed with the City Clerk on September 22, 2020. This amendment is a supplement
38 to be read together with Hedreen LLC's appeal filed on September 22, 2020. Hedreen LLC
39
40
41
42
43
44
45
46
47

1 incorporates by reference all filings, evidence, and pleadings filed by any party before the
2
3 Hearing Examiner as authorized by the Hearing Examiner, including without limitation all
4
5 records pertaining to the November 2020 through February 2021 remand hearing ordered by
6
7 Council.
8

9 **IV. Amended Arguments on Appeal**

10 HEDREEN LLC supplements its appeal of the Hearing Examiner's recommendation
11
12 to deny in part and revise on remand in part Hedreen LLC's objection to the City of Seattle's
13
14 Waterfront Local Improvement District No. 6751 proposed final assessment dated
15
16 December 30, 2019 against the following property:
17

18 King County Parcel No. 2285130010
19 Site Address: 1635 8th Ave., Seattle, Washington
20 Proposed Final LID Assessment for Parcel: \$683,338
21

22 To avoid repetition, Hedreen LLC incorporates the evidence and arguments raised
23
24 before the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
25
26 amended appeal.
27

28
29 **A. The Anticipated Special Benefits to Hedreen LLC's Property should be**
30 **Discounted to Present Value and Assessments Adjusted as Appropriate**
31

32 On remand, the City's appraiser acknowledged that special benefits to parcels can be
33
34 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
35
36 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
37
38 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
39
40 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
41
42 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
43
44 accepted that recommendation. The City's appraiser further acknowledged that benefit
45
46 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
47

1 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
2 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
3 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
4 calculations to present value because the general benefits are not anticipated from the LID
5 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
6 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
7 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
8 benefit calculation, and related assessments, to account for the delay between the assessment
9 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
10 standard appraisal practice, and renders the other proposed Waterfront LID special
11 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
12 “fundamentally wrong methods.”
13
14

15 All special benefit taxes assessed by a municipality must be based on “actual,
16 physical and material [special benefits that are] not merely speculative or conjectural.”
17 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
18 Additionally, the assessments may not materially exceed the actual special benefit conferred
19 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
20 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
21 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
22 discount benefits the City estimated would accrue to the properties from improvements to be
23 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
24 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
25 property while treating all or most others (including Taxpayer’s) differently, and
26 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
2 for some properties because the benefits are too distant, while assessing other properties as
3 though distant benefits have already been secured. As Taxpayer identified in its September
4 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
7 reject the improper calculation of the benefit or remand and require the appraiser to discount
8 the benefits to net present value.
9

10
11
12
13
14
15
16
17 **B. The City's Appraiser's Disregard of Hotel STR Report Performance**
18 **Data is Another Example of How His Analysis is Unreliable, Not**
19 **Admissible under Frye or ER 702, and His Proposed Special**
20 **Assessments are not based on Actual, Measurable and Special Value**
21 **Increases from the anticipated LID Improvements.**
22

23 The City's appraiser was provided actual performance data for the remanded hotels,
24 including their average daily room rates, from which he had been instructed to "recalculate"
25 hotel "before" values on remand. *See* Hearing Examiner Initial Recommendation at p. 117
26 (Sept. 8, 2020). The appraiser refused, explaining that, had he done so, his before values
27 would be "too low." Instead, he divined an alternative value from "comparable sales", and
28 then worked backwards to calculate small adjustments to his average daily room rate
29 assumptions, substituting them in his "income spreadsheets," and thereby correlating his
30 income analysis to his preconceived value estimate. His remand analysis demonstrates that
31 his whole "income approach to valuation", used for both hotels and other commercial
32 properties, is contrived speculation on speculation. The City's appraiser disregarded these
33 hotels' actual net income in a supposed "income analysis." *See e.g.*, Deposition of Robert J.
34 Macaulay, 7:10-13 (December 22, 2020) (Attached as Exhibit A to Objector's Statement on
35 Remand for Case Nos. CWF-0318, 0413, 0415, 0417, 0418, 0423, 0429, 0436). Taxpayer's
36
37
38
39
40
41
42
43
44
45
46
47

1 appraiser submitted an appraisal with room rates much closer to the actual performance of
2 the hotel and should be incorporated. *See* Declaration of John D. Gordon in City Council's
3 LID Remand, (Jan. 8, 2021).
4

5
6 For example, compare the room rate and valuation for the appraisals in the table
7 below, where the actual average daily room rate for 2019 was \$225. Hedreen LLC testified
8 that the City Appraiser's assumed room rate was too high - it not only had not been
9 achieved, but even pre-Covid, was not reasonably achievable.

Hyatt at Olive 8 CWF-0429	Appraisal Amount
Hotel Value	\$111,519,000
Less Personal Property	\$5,200,000
Real Estate Value	\$106,319,000
Benefit Ratio	1.00%
Special Benefit	\$1,062,000
Levy Ratio	39.18%
LID Levy	\$416,115

The City's appraiser only slightly reduced his original values in ways that are still entirely inconsistent with historical performance data. The City's appraisal and analysis is speculative and should be rejected. The City Council should at least adopt Hedreen LLC's "before values" and resultant LID assessments.

C. In Light of Covid's Continuing Impact on Hedreen LLC and other Downtown Property Owners and other Material Changes Since October 2019, the LID Should be Cancelled, or at Least Assessments Recalculated, to take Into Account Property Value Reductions

In Hedreen LLC's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e] into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and other relevant developments since October 2019." When Washington's first COVID restrictions were imposed in March and April 2020, there was an assumption that they would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover for another 5 years. Retail stores are boarded up. Homelessness and related challenges have gotten much worse. The City has already imposed higher minimum wages and taxes on businesses to try to fund recovery. The West Seattle Bridge and other bridges are in immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is

1 several years from completion, as a best case. In current circumstances, a downtown tax to
2 fund new, non-essential park improvements against financially strapped taxpayers, and
3 likely passed through to financially strapped tenants and customers would be unfair to
4 taxpayers and a misallocation of city resources. COVID threw everyone for a loop. But as
5 the City rethinks its budget priorities for the next few years, and its potentially funding
6 sources, Taxpayer respectfully requests that the City dissolve the assessment, at least until it
7 (and property owners) have a chance to recover, and that any assessment take into account
8 the changed circumstances since this appeal process started on February 4, 2020 to avoid
9 unnecessarily and perhaps permanently killing downtown properties and businesses in the
10 name of bettering them.
11

12 **V. Relief Requested**

13 Particularly in light of the Committee's decision not to take further comment from
14 appellants, Taxpayer respectfully request that each Committee member carefully review the
15 full record transmitted to Council before voting on Taxpayer's appeal.
16

17 HEDREEN LLC respectfully reiterates its request from the September 22, 2020
18 appeal that the City Council:
19

20 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
21 assessment dated December 30, 2019; or
22

23 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
24 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the
25 hearing in this matter; or
26

27 3. Grant the Examiner's recommended remand but with instructions to
28 recalculate and reduce Taxpayer's assessment using recognized appraisal techniques
29 consistent with USPAP and

- 1 a. Excluding any property value increase attributable to viaduct removal and
2
3 other planned WSDOT Improvements;
4
5 b. Taking into account the effects of the COVID-19 pandemic on the value of
6
7 Taxpayer's property and other relevant developments since October 2019;
8
9 c. Accounting for and excluding (1) any special benefits from existing or
10
11 planned improvements that already provide similar benefits to Taxpayer's property, and (2)
12
13 any special detriments from construction and other anticipated LID-related disamenities;
14
15 d. Accounting for and including only those actual benefits anticipated to accrue
16
17 to Taxpayer's property based on its location relative to Pier 58, Overlook Walk, and the
18
19 Promenade, and specific elements of the LID Improvements;
20
21 e. Discounting anticipated special benefits to present value, based on reliable
22
23 estimates regarding when special benefits will start accruing following completion of the
24
25 LID Improvements; and
26
27 f. Accounting for such other issues specific to Taxpayer's property relevant to
28
29 calculation of such assessment; and
30
31 4. Grant such further relief as the City Council deems just and proper.

27
28

29 **III. Statement of Taxpayer's Interest**

30 RRRR Investment LLC is the taxpayer for the properties that are subject to the
31 proposed final assessment described in Section IV. The properties are two high-end
32 residential condominiums at 1521 2nd Avenue, Seattle, WA.
33
34

35 The basis of the proposed assessment is a Final Special Benefit/Proportionate
36 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
37 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
38 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
39 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
40
41
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
22
23 was based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Taxpayer appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 2538831460
34 Site Address: 1521 2nd Ave., Seattle, Unit 3800, Washington 98101
35 Proposed Final LID Assessment for Parcel: \$41,245

36
37 King County Parcel No. 2538831480
38 Site Address: 1521 2nd Ave., Seattle, Unit 3802, Washington 98101
39 Proposed Final LID Assessment for Parcel: \$44,084

40
41 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
42
43 the evidence and arguments raised before the Hearing Examiner into this appeal. In
44
45 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
46
47 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 106, Sections II.6, II.7, II.12, II.14, II.18, II.19, II.20, II.21, II.22, II.23, II.24,
8 II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3, IV.B.4,
9 IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.11,
11 IV.C.12, IV.C.14, IV.C.15, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38

39 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
40 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
41 Public Works committee secure and provide appellants with such a record, so that the appeals can
42 then be supplemented with that additional information, so as to make the Committee's consideration
43 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
44 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
45 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
46 retained by Perkins Coie are part of this case file.
47

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$105,265 for Unit 3800 and \$115,547 for
34 Unit 3802, assuming the LID Improvements were in place and providing benefit in
35 October 2019. However, the LID Improvements will not be completed until the end of
36 2024 if the City meets its current schedule, and many of WSDOT’s alternative
37 improvements will not be built. The present value of future improvements deliverable in
38 five years is significantly lower than the current value of improvements that already exist.
39 Further, ABS’s own materials show that benefits may not accrue for at least five years
40 after they are completed, in 2029. If the hypothesized special benefits are discounted to
41 present value, the assessments materially exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” See Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
2 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
3 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
4 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
5 Final Study fails to meet basic standards for admissibility and must be remanded.
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6
7 **V. Standard of Review**
8

9 “When considering the assessment roll, the city council sits ‘as a board of
10 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
11 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
12 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
13 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
14
15

16 The proposed assessments are presumed correct, “unless overcome by clear, cogent
17 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
18 than the heightened presumption of correctness on judicial appeal because “applying these
19 elevated standards at the municipal hearing would afford unwarranted deference to a report
20 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
21 presumption is not evidence and its efficacy is lost when the other party adduces credible
22 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
23 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
24 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
25 presented credible evidence showing that the City’s proposed assessment is arbitrary,
26 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
27 to the City to prove the assessments are actual, measurable, special, non-speculative and
28 proportionate. The City failed that burden.
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **VI. Grounds for Appeal**

2 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
12 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
13 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
14 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
15 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
16 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
17 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
18 provided expert opinion showing that improvements actually diminished value of the
19 property). In fact, no independent evidence is required at all if, for example, objectors show
20 that the assessment was grounded on a fundamentally wrong basis due to an error in the
21 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
22 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
23 a property owner could simply point out that the square footage assumed in the City's
24 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
25 Examiner's Recommendation: Sections II.12, II.14, IV.A, IV.B.11(a), IV.C.2, IV.C.8, and
26 IV.C.11.
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

2 2. RCW 35.43.040 provides cities and towns authority for ordering local
3
4 improvements and for levying and collecting special assessments “on property specially
5 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed
6
7 upon all the property in accordance with the special benefits conferred thereon.” RCW
8
9 35.44.010.
10

11 3. No analysis of general benefits. Special assessments have been “held valid
12
13 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
14
15 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
16
17 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
18
19 they are for the construction of local improvements that are appurtenant to specific land and
20
21 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
22
23

24 4. Taxpayer’s properties are not specially benefited by the LID Improvements.
25
26 The primary purpose and effect of the LID Improvements are to benefit “members of the
27
28 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
29
30 library is for the benefit of the members of the whole community individually and
31
32 collectively who may be served by it”). Mr. Macaulay’s own chapter of the LID Manual
33
34 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
35
36 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
37
38 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
39
40
41

42
43 ² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 that if an appraiser “identifies both general and special benefits, these benefits should be
2 clearly distinguished and explained, and only special benefits should be included in the
3 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
4
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6
7 183:4. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
8
9 including those arising from construction necessary to meet basic design standards. *See*
10
11 Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
12
13 construction costs related to meeting design standards which may be general benefits as
14
15 distinct from construction costs emanating from requirements of the LID project”). To the
16
17 extent Taxpayer’s properties may benefit from the LID improvements, the benefit is general
18
19 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
20
21 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
22
23 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.
24
25

26 5. LID Improvements not necessary. Unlike typical LID projects, the
27
28 Waterfront LID improvements are largely unnecessary to the functionality of any particular
29
30 property, including Taxpayer’s properties. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
31
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33
34 held invalid where owners would have benefitted equally from increase of only 9 feet);
35
36 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
37
38 intersection for new water main for hydrant held invalid because land was already afforded
39
40 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
41
42 not necessary their properties, which already have sufficient access to the waterfront,
43
44 downtown restaurants, and other amenities. *See* 3/12/2020 Hrg. Tr. (B. Madsen) at 107:15-
45
46 108:12. Specifically, waterfront access is readily available via Pike’s Place or the walkway
47

1 at the Four Seasons. *Id.* And the testimony established that the building already owns the air
2 space to the west and the units are on the 38th floor, so adding a streetscape/park along the
3 waterfront does little to add to their western view which looks toward the water and the
4 Olympic mountains. *Id.* at 105:8-17.
5
6

7
8 6. The fact that there is no case law differentiating between binary
9 improvements and parks does not change the law prohibiting assessments on properties
10 already adequately served by existing amenities. *See* Examiner's Recommendation at
11 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
12 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
13 reasoning excuse the City's failure to account for existing amenities as part of the special
14 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
15 the incremental effect of new park improvements on the value of properties, much like
16 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
17 (Crompton's Report) at 12-13.
18
19

20 7. To the extent benefits can be considered "special" as opposed to general, they
21 are nominal or nonexistent for many properties even in the Central Waterfront, which
22 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
23 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
24 change due to expansion of sewer service *near* owners' parcel which were already
25 connected). Here, as mentioned above, the views from these units is already protected and
26 Taxpayer testified that during the years of construction, there could in fact be a tremendous
27 devaluation in the views. 3/12/2020 Hrg. Tr. (B. Madsen) at 108:13-23. Even if the City
28 could assess for a view change (and it has promised not to assess for viaduct removal), the
29 fair market values of Taxpayer's properties have not changed because the LID
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Improvements have not improved the properties' waterfront view or access to the
2 waterfront, nor will they when the City anticipates completion in 2024. For these reasons,
3 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
4 IV.C.3, IV.B.9, and IV.C.3.
5
6

7
8 8. No analysis of special detriments. The Final Study fails to properly account
9 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
10 owners for removal and cleanup of underground storage tanks discovered during the
11 improvement project). Mr. Madsen testified that the only potential impacts from the LID
12 Improvements are negative—e.g., noise and disruption from four years of construction,
13 increased potential for crime and homelessness, and increased congestion from tourism and
14 loss of parking. 3/12/2020 Hrg. Tr. (B. Madsen) at 109:3-111:21. And Mr. Shorett
15 explained that the property value of these units are not likely to increase due to the LID
16 Improvements because buyers of luxury residential properties are more concerned with the
17 amenities of the property itself, including the views which are already protected. *Id.* at
18 15:12-16:8.
19
20

21 9. Although Mr. Macaulay claims he analyzed impacts on the City's planned
22 elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation of how
23 lost parking might be a detriment, and no property-specific parking analysis in any of his
24 materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg. Tr. at
25 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
26
27

28 10. Likewise, there was no analysis of the risks associated with disamenities such
29 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
30 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
31 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
2 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
3 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
4 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
5 the maintenance agreement. *Id.* at 13:4-14:2.
6
7
8
9

10 11. There was also no consideration of negative impacts from another four-plus
11 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
12 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
13 law allowing him to dismiss these actual, non-speculative impacts. Because future special
14 benefits calculations are inherently speculative, Washington's eminent domain statute
15 specifically allows condemnees to postpone special benefits assessments until improvements
16 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
17 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
18 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
19 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
20 Greenway, the Greenway district "significantly" lagged in value).
21
22
23
24
25
26
27
28
29
30
31

32 12. For these reasons, Taxpayer appeals the following portions of the Examiner's
33 Recommendation: Sections II.25, IV.B.8, and IV.B.9.
34
35
36

37 13. Special benefit estimate is speculative. When calculating a special benefit,
38 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
39 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp. 6097*, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4
5 14. Assuming without conceding that one day, the City’s planned LID
6
7 Improvements might increase the value of neighboring properties to some extent, that
8
9 potential benefit is many years away and speculative. While appraisers tolerate some degree
10
11 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
12
13 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
14
15 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
16
17 the level of precision implied in the Final Study due to the size of the LID and use of
18
19 hypotheticals).
20

21 15. Although LIDs are sometimes finalized prior to completion of improvements,
22
23 this is typically just six month or a year prior, and the assessments are otherwise supported
24
25 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
26
27 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
28
29 will not be realized for four or five years. In the meantime, there is permitting risk,
30
31 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
32
33 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
34
35 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
36
37 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
38
39 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
40
41 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
42
43 market value would be as of the date the project would be finally constructed” because
44
45 “[t]here could be a lot of elements in the market that did occur between now and then that
46
47 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if

1 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
2 fluctuate over time” and “I can’t predict the future”).

3
4
5 16. The record is clear that while no one can know what “special benefit” might
6 accrue to these properties in four years (if any), we do know that there are no actual benefits
7 now. The LID improvements provide no immediate special benefit to property owners
8 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
9 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
10 sewer system for future users). For example, notwithstanding the questionable hypothesis
11 that residential condominiums will benefit from an expected increase in tourism (higher
12 room rates or occupancy) when the improvements are complete, it is undisputed that tourists
13 are not coming in larger numbers now because of something happening five years down the
14 road. *Cf. O’Connor Decl. ISO Closing Stmt.*, ¶ 7 (dated 7/7/2020) (no apartment leased
15 today for 18 months would rent at a higher rate due to improvements coming in 2024).
16

17
18 17. Further, there are no “plans and specifications” on file with the Clerk’s Office
19 for the LID Improvements, and it is unlawful to move to final assessments without such
20 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
21 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
22 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
23 dollars on projects still early in the design process. *See* Washington Attorney General
24 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
25 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
26 of programs and included “only so much of the overall costs” that took place within and
27 benefitted the assessed properties).
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 18. The COVID-19 crisis highlights how fundamentally speculative and unfair it
2 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
3 anticipated to be delivered five years later. Even before COVID, it was speculative to
4 assume that market highs experienced in October 2019¹ would be sustained through 2024,
5 after an already extraordinarily long expansion period. *See, e.g.*, 3/3/2020 (A. Gibbons)
6 Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing
7 my analysis in October 2019, who would have thought that this COVID issue would
8 happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought
9 process was that the market was going to continue to go up.” *Id.* There is no basis for
10 assuming that values hypothesized in October 2019 will remain relevant; they are already
11 irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although
12 COVID does not change actual values as of October 2019 (*see* Examiner’s
13 Recommendation at 109), the pandemic has impacted *current* values and rendered the
14 hypothetical October 2019 Final Study valuations outdated.

15 19. As another example of how future events could affect the accuracy and
16 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
17 Examiner re-open the record to allow the City to explain whether the assessments against
18 property owners within the LID are, in fact, being used by the City to fund the emergency
19 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use

20 ⁴ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King
21 5, Aug. 15, 2020), available at <https://www.king5.com/article/news/local/seattle/seattle-mayor-approves-emergency-dismantling-of-waterfront-pier-58/281-f6b7c7d0-78f2-4826-97c8-0b60d4097aa3>; *See* Aug. 21, 2020 Memo from R. Holtz et al. to L. Arber re HPA Request for Pier
22 58 (Waterfront Park) Emergency Demolition Project, *available at*
23 <https://www.govonlinesaas.com/WA/WDFW/Public/EnSuite/Shared/pages/util/StreamDoc.ashx?query=UxFpa3XqI8020u5QdalfpJXX0C+FjfKT5/OpyMkto74=>; *see also* Aug. 13, 2020 Ltr. from H.
24 Burton to D. Graves et al. re Review of Pier 58 Movement Observation Report & Recommendations,

1 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10 20. There is also no certainty the improvements will be delivered on time. Mr.
11 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
12 delay in construction schedule would not constitute a “material change” under the City
13 Council’s ordinance authorizing the improvements. In other words, the City cannot
14 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
15 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
16 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
17 potential delays and project changes inherent in those processes, that call into question the
18 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
19 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
20 Decl., dated 4/15/2020).

1 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
2
3 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
4
5 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
6
7 at 66:17-25. He performed no independent due diligence to determine the reliability of the
8
9 City’s estimates for completion of the LID Improvements, or to ensure that proposed
10
11 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
12
13 agreed that if any of his assumptions are incorrect, his opinion of market value would need
14
15 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
16
17 68:11-18.

18
19 22. The City has cited no authority—and Taxpayer is aware of none—that
20
21 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
22
23 assess taxes for “actual” special benefits that will not accrue for another five years (if all
24
25 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
26
27 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
28
29 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
30
31 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
32
33 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
34
35 IV.C.14, and IV.C.18.

36
37 23. Failure to discount special benefit estimates to account for risks and present
38
39 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
40
41 have accounted for risks associated with delivery of the improvements (including permitting
42
43 risk, construction risk, general economic risk) and any special damages associated with
44
45 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
46
47 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the

1 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
2 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
3 the impact of future conditions [through] discounted cash flow analysis.”).
4

5
6 24. Mr. Macaulay acknowledged that appraisers can discount the value of a
7 future condition not in place at the date of valuation and can discount for the time value of
8 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
9 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
10 Discounting would also have been consistent with his approach for analyzing special
11 benefits to vacant land. He testified that the difference between similarly situated vacant
12 sites slated for development and already developed sites was that the labor, capital and risks
13 associated with development had not yet been borne for those vacant sites. Therefore, the
14 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
15 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
16 fully permitted, has not completed environmental review, and has not reached full design is
17 presently worth significantly less.
18
19
20
21
22
23
24
25
26
27
28
29

30 25. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
31 present value, an appraiser would consider discount rates for land development to account
32 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
33 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
34 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
35 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
36
37
38
39
40
41
42

43 26. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley’s
44 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
45 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
46
47

1 Ex. A. Notably, this is lower than the City’s proposed \$171,000,000 assessment. Thus,
2
3 ignoring momentarily all of the other methodological and other flaws discussed here and in
4
5 Taxpayer’s case-in-chief, and assuming that the LID Improvements provide special benefits
6
7 as soon as they are complete in 2024, Mr. Macaulay’s hypothetical assessment materially
8
9 exceeds special benefits when reduced to present value. Further, to the extent the City is
10
11 arguing that because they are permitted to assess 100% of the special benefit, the special
12
13 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
14
15 is again wrong. After applying proper discounting, the City’s proposed special benefit
16
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18
19 100% of the total estimated special benefit.

20
21 27. But even the assumption that the LID improvements would deliver benefits
22
23 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
24
25 on. Rather, those studies demonstrate that a discount period of five years is conservative.
26
27 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A’s study
28
29 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay’s backup files)
30
31 indicates that during the construction period, the Greenway district “significantly” lagged in
32
33 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
34
35 “reorientation of development to capture value takes time”—specifically, 12-13 years. *Id.* at
36
37 30-31 (discussing New York City High Line and San Francisco Embarcadero
38
39 improvements). Given the lengthy delay, any prediction of future special benefits is
40
41 speculative, especially during the construction phase where values are likely to decline.
42
43 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
44
45 Improvements take a similarly long period of time after they are complete to start producing
46
47 tangible property value benefits, each additional year of delay results in further discount to

1 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
2
3 A.

4
5 28. Applying the same discounting methods described above and in Mr. Gibbons
6
7 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
8
9 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
10
11 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
12
13 100% assessment should be no more than \$9,915 for 1521 2nd Avenue Unit 3800 (CWF-
14
15 0430) and \$10,884 for 1521 2nd Avenue Unit 3802 (CWF-0431). Anything more would
16
17 permit the City to assess Taxpayer based on a hypothetical assumption that these
18
19 improvements are in place and providing benefit, and ignore the risks, construction
20
21 disamenity, and time value of money that normal appraisal principles would take into
22
23 account. *Id.*, ¶ 20. Proportionality would counsel that the assessment should be only 39.2%
24
25 of that assessment cap, or \$3,887 for CWF-0430 and \$4,266 for CWF-0431.

26
27 29. Attachment B includes four Excel spreadsheets applying these discounting
28
29 methods to Taxpayer's assessments. It is undisputed that special benefits will not actually
30
31 accrue until the LID Improvements are complete in 2024. Accordingly, the first two
32
33 spreadsheets demonstrate that discounting the City's hypothetical October 2019 special
34
35 benefits to present value would reduce Taxpayer's assessment to \$14,151 for Unit 3800
36
37 (CWF-0430) and \$15,124 for Unit 3802 (CWF-0431), exclusive of any other flaws in the
38
39 City's proposed assessment. The third and fourth spreadsheets shows even more drastic
40
41 reductions after taking into account discounting to present value for 10 years (*i.e.*, from 2029
42
43 to account for the time it takes for the improvements to capture property value). After such
44
45 reductions, Taxpayer's assessment would be just \$3,888 (for CWF-0430) and \$4,268 (for
46
47 CWF-0431). These spreadsheets do not address other issues raised by Taxpayer's appeal,

1 but are intended to help demonstrate how unfair and inflated the City's proposed
2 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
3 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
4
5

6
7 **Appraisal and Assessment Calculation Methods Are Flawed**
8

9 30. The "general rule is that each lot, piece, or parcel of land should be assessed
10 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
11 Wn.2d at 97.
12

13
14 31. It is proper to sustain a challenge to an assessment, even without the appraisal
15 testimony from the owner, where the objector's expert establishes that the assessment was
16 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
17 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
18
19

20 32. The City's appraiser purports to utilize the income method of valuation but
21 relied on inaccurate revenue and market data, as discussed further below.
22

23 33. The City's appraiser purports to utilize the comparable sales method of
24 valuation, but no City witness attempted "to characterize any one, or all of them, as
25 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
26 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
27 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
28 characterize any one, or all of them, as comparable to any particular property within the LID").
29 And no City witness could explain how specific adjustments were made to these sales to
30 account for value increases due to the hypothesized Before and After Improvements. For this
31 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
32
33

34 34. Special assessment improperly includes value lift from the Before
35 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
36
37
38
39
40
41
42
43
44
45
46
47

1 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
2 Improvements, which WSDOT had independently committed to fund. However, Mr.
3 Macaulay did not calculate the actual market value of LID properties in October 2019, and
4 did not separately analyze the hypothetical increase to property values attributable to
5 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
6 current value and then separately calculate a hypothetical "With WSDOT" Before value);
7 *see also* Hamel Decl., ¶¶ 11, 12 (explaining that for condos, the "first task" was to determine
8 current values but not explaining how they included the value of the hypothetical "WITH
9 WSDOT" Before Improvements); Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020);
10 *see also* Gibbons 1/30/2020 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018
11 Letter (attached to Appeal Petition) at 3-4; Shorett Appraisal Review (attached to Appeal
12 Petition) at 2-14. Without any documented basis or support, Mr. Macaulay simply "ma[de]
13 a judgment a call" on what occupancy and rates would have been for the commercial
14 properties assuming all of the WSDOT Improvements are completed as of 2019. Macaulay
15 Depo. at 129:19-130:11. This outright omission precludes any independent evaluation of
16 the true market "Before" values. *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet
17 professional appraisal standards; if an appraiser uses current sales data to infer values, then
18 the appraiser must explain how he analyzed that data and other information to come up with
19 the hypothetical value. 3/3/2020 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not
20 just removal of the viaduct, but also other road, pedestrian and landscaping improvements
21 WSDOT had already committed to make.

22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43 35. However, because Mr. Macaulay testified that he did include some WSDOT-
44 related value-lift in the "Before" values, it follows that part of the special assessment
45 improperly is based on value attributable to the WSDOT Improvements. As shown by
46
47

1 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
2 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
3 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
4 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
5 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
6 to properly exclude the value of Before Improvements from the assessments. For these
7 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
8 Sections II.19, II.29, and IV.B.11(a)(ii)
9

10
11
12
13
14
15
16
17 36. Special benefits were assigned rather than measured. Mr. Macaulay
18 arbitrarily "assigns" special benefits to Before values instead of measuring them for each
19 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
20 Shorette) Hrg. Tr. at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-91:13.
21
22

23
24
25 37. For condos, ABS applied a uniform special benefit percentage to every unit
26 within a condominium building, notwithstanding individual differences among the units.
27 For example, he relied solely on King County Assessor data for information regarding each
28 condo, but for Taxpayer's properties, there was no information about views. Incredulously,
29 at the same time he insisted that the After value for each condo was calculated "parcel-by-
30 parcel" and that the special benefit percentage was simply a reflection of the difference
31 between Before and After values. In fact, there is no real way to check this work or verify
32 his methods because the analysis does not exist either within his report or in the backup data.
33 However, the simple fact that every single condo within a building received the exact same
34 special benefit percentage increase is evidence enough that Mr. Macaulay did not make an
35 individual parcel-by-parcel special benefit analysis. *See* Gibbons Decl. ISO Closing Stmt., ¶
36 6 (dated 7/7/2020).
37
38
39
40
41
42
43
44
45
46
47

1 38. For these reasons, Taxpayer appeals the following portions of the Examiner's
2 Recommendation: Sections II.19, IV.B.11(a)(iii), and IV.C.15.
3

4 39. Special benefit falls within margin of error. The Final Special Benefit Study
5 applies an estimated value enhancement of less than 4%, which is generally within the
6 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
7 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
8 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
9 of one another, this difference is considered reasonable as it falls within the standard margin
10 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
11 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay's micro-special benefit
12 percentages fall far below that 5% margin, "there is no way of authenticating" such
13 incremental changes because "[m]arket forces completely obliterate any tiny little noise
14 factor like that." *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
15 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Yet,
16 Additionally, the fact that "Before" values are also based on a hypothetical that adds some
17 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
18 appraiser to discern the micro-value differences between hypothetical conditions that are so
19 similar (the WSDOT improvements compared to the LID improvements) "verges on being
20 ludicrous." 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
21

22 40. Even if it were possible to accurately tease out such a miniscule hypothetical
23 value change due to improvements coming five years later, experts testified that there is no
24 data to justify the mathematical adjustments—they are just the appraiser's guesses as to
25 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (P. Shorett) Hrg. Tr. at
26 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at 88:21-88:24 ("you cannot measure one percent
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 difference in a high-rise building for this kind of a medium ... it's simply assigned to a
2 before value"). For these reasons, Taxpayer appeals the following portions of the
3 Examiner's Recommendation: II.27 and IV.B.4.
4

5
6 41. No analysis of value increase attributable to individual components of the
7 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
8 percentage difference between hypothetical Before and After conditions. Throughout his
9 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
10 descriptions in the Addenda even though he testified that he relied on these to calculate
11 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
12 someone might be able to determine how he attributed value to After conditions described in
13 the Addenda, he answered that that was "not the scope of the assignment" because he was
14 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
15 that the six components were not actually a continuous project, that he was viewing them
16 together because the City asked him to, and that if he were to view them independently,
17 there was a low probability that properties in the north would specially benefit from
18 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.
19
20

21 42. Not only did he fail to analyze benefits from each of these non-contiguous
22 improvements, his familiarity with descriptions as whole was tenuous at best. See, e.g.,
23 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
24 arose from specific Before/After descriptions in the Addenda); cf. *Anderson v. City of*
25 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
26 objectives that guided regulators' assessment of architectural plans for buildings along a
27 "signature street" were so vague that they amounted to ad hoc review based on the

46
47

1 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
2 even though he used the renderings as "visual aid[s] in appraising the property in the before
3 and after" to "visually see what the differences would be," he could not explain what
4 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
5 when shown a rendering of a two-lane road going down to one-lane in the After condition
6 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
7 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
8 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
9 could explain the depiction of the same trees in the After condition nearly twice as tall as in
10 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
11 of the Examiner's Recommendation: II.27 and IV.B.4.
12
13
14
15
16
17
18
19
20
21

22 43. Special assessment is not supported by comparable studies, data or reports.
23 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
24 that the LID Improvements will lead to meaningfully increased real estate values for
25 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
26 comparable sales or information from the "over twenty-five studies and reports" to arrive at
27 very precise special benefit increases for the residential condominiums, including
28 Taxpayer's properties. For example, although Mr. Macaulay stated that no single report or
29 study was directly on point due to the unique nature of the LID Improvements (*see, e.g.,*
30
31
32
33
34
35
36
37
38
39

40
41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments
2
3 in his parcel-by-parcel analysis other than to say that the studies generally provided “some
4
5 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
6
7 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
8
9 similarities and differences between these improvements and the comparable parks he
10
11 looked at).

12
13 44. Ms. Hamel also explained that after considering the “over 25 studies and
14
15 reports” as background, ABS concluded that there was “no consensus among the many
16
17 reports reviewed as to a set block or foot radius that should be utilized.” Hamel Decl. at ¶
18
19 33. So, they “took that information and calibrated it to the LID improvements and
20
21 conditions in Seattle[.]” *Id.* However, there is no analysis and no documentation on how
22
23 general principles articulated in the studies translated into specific property value increases.
24
25 ABS does not explain what the studies indicate should be an outer limit on impacts to
26
27 property value, and do not explain *how* the different streetscape and “park-like” elements
28
29 were treated—only that they were treated differently.

30
31 45. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
32
33 assignment of incremental increase of 0.5% to 4% to property values within the LID.
34
35 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
36
37 research misinterprets his work in critical ways, including because the LID Improvements
38
39 manifest the characteristics of a parkway (not a park), and his research indicates that most of
40
41 a *park*’s impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
42
43 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
44
45 related value increases are in fact smaller; that estimated increases are “best guesses” rather
46
47 than predictions of property value increases in a particular city; and that percentages do not

1 account for diminishing returns after taking into account water views, which would be the
2 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
3 topography grants most properties in downtown a water view.
4

5
6 46. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
7 that this was just one source of information that was not entirely relevant because, among
8 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
9 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
10 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
11 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
12 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
13 Crompton concluded that 500 feet via road from “park” improvements is just one or two
14 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
15 significantly beyond that which the park study indicated (even if it was legitimate to use the
16 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
17 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
18 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
19 Taxpayer’s properties are not within 500 road network feet from the “park” improvements.
20 See Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
21

22 47. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
23 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
24 six LID components together as one entity. See 6/23/2020 Hrg. Tr. at 167:15-180:16. And
25 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
26 materials, it was clearly an important—if not *the* most important—source of information for
27
28
29

43
44
45
46
47

1 estimating special benefits (especially with respect to the condos).⁷ No City witness
2 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
3 parcel-by-parcel analysis.
4

5
6 48. Ms. Hamel’s testimony that Crompton’s report is “one of the first studies to
7 look at various correlations between parks and real estate values” and that “his study was
8 cited in many of the research studies and economic reports we reviewed” suggests that
9 without this study, ABS would have little to no basis for the special benefit estimates for
10 condos. Hamel Decl. at ¶ 37 (dated 6/26/2020).
11
12

13 49. The destination parks discussed in the Final Special Benefit Study do not
14 provide reliable, comparable, and valid support for the calculation of special assessments
15 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
16 critique of every case study cited concludes the changes to those “dwarf the difference
17 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
18 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
19 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
20 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
21 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
22 funded by a LID. And in virtually all of those cases, the park improvements dramatically
23 restored unimproved or blighted areas, and properties evaluated were within two or three
24 blocks of the park.
25
26

30
31
32
33
34
35
36
37
38
39
40
41

42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 50. ABS’s claimed reliance on three economic studies to support property value
2 increase is also flawed. The HR&A study does not inform what value increases are
3
4 expected from the LID Improvements because it projects increases to tourism from *all* of the
5
6 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
7
8 dissimilar parks in other cities,⁸ making the methodological application to the LID
9
10 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
11
12 conclusion that there would be *no new net visitors* from downtown residents as a result of
13
14 the LID Improvements and could not explain how this impacted his condo analysis.
15
16 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
17
18 Property Values” primarily focused on whether the benefits accrue to the larger community
19
20 rather than properties adjacent to the park. And the 2014 New York City Department of
21
22 Transportation study is not based on real estate transactions and market sales and fails to
23
24 substantiate any link between increased retail sales and property values. Moreover, this
25
26 study only looked at impact either directly abutting the streetscape improvement, or a couple
27
28 hundred feet for plaza-like improvements.
29

30 51. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
31
32 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
33
34 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
35
36 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
37
38 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
39
40
41
42

43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
2 asked whether he considered that HR&A's estimated LID impact is six times greater than
3 TLP's assessment of Seattle's entire park system, his surmised that it was because the
4 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
5 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
6 assumptions to account for this difference, which may be partly explained by the fact that
7 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
8 approximately 3.44% of King County tourists visit Seattle primarily because of the city
9 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
10 waterfront improvements.

20 52. Although proximity to the improvements is a key factor in all of these
21 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
22 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
23 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
24 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
25 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
26 Improvements is approximate 20 acres and it is not a community park.⁹

34 53. There is no explanation in the Final Study or the supporting materials of how
35 the studies or comparable sales were used to derive values for Taxpayer's properties. For
36 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
37 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
38
39
40
41
42

43 ⁹ *See*
44 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
45 connecting Seattle's central waterfront to downtown.").

1 54. Failure to comply with USPAP. Taxpayer's assessment also rests on a
2
3 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
4 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
5 recognized) for developing the MAI standards for mass appraisals, testified that the Final
6
7 Study does not meet mass appraisal standards nor allow for independent assessment of the
8
9 accuracy of Mr. Macauley's conclusions.
10

11
12 55. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
13
14 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
15 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
16
17 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
18
19 testimony suggests that he incorrectly believed that the only difference between direct
20
21 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
22
23 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
24
25 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
26
27 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
28
29 Gordon uses in doing his limited restricted report").
30

31
32 56. But the difference is not only in reporting—mass appraisal techniques must
33
34 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
35
36 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
37
38 parcel approach:
39

40 The mass appraisal technique is an appraisal method used to evaluate
41 a group of properties that are subject to similar market forces as of a
42 certain date through the use of market data, statistical analysis and
43 testing. As a result, the mass appraisal technique does not require or
44 involve analysis of each individual property's specific data.
45
46
47

1 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).

2
3 57. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
4 universe of properties as a given date using standard methodology, employing common data,
5 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
6 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
7 model" is "a mathematical expression of how supply and demand factors interact in a
8 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
9 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
10 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

11
12 58. Regardless of client direction, Mr. Macaulay is required to comply with
13 USPAP. So if, as he determined, a "[p]arcel-by-parcel direct appraisal" would not have been
14 economically feasible because it would have taken "an incredible amount of time and cost"
15 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
16 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 ("performing an
17 individual appraisal of each [condo] parcel would have been cost and time prohibitive").

18
19 59. But Mr. Macaulay's methods fail to comply with USPAP Standards 5 and 6
20 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
21 value, fails to calibrate the model structure to determine the contribution of the individual
22 characteristics affecting value, and does not review the mass appraisal results against actual
23 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
24 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

38
39
40
41
42
43
44
45
46
47

¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the relationship between characteristics that affect value, and to calibrate that model to specify how individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-21). The purpose is to rationally determine what characteristics will create value, and by how much.

1 60. Mr. Macaulay explained that factors like “aesthetic change in the area, the
2 proximity to the elements, the increase in market rent, market vacancy changes,
3 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
4 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
5 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
6 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
7 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
8 internal review process. *Id.* at 104:24-105:20. There is no documentation of the “internal
9 review process” for the condos. 6/25/2020 Hrg. Tr. at 165:13-18. And because both the
10 Before and After values were hypothetical, it was not possible to identify matched pair sales
11 and no City witness explained how ABS Valuation made adjustments to “comparable” sales
12 in order to check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6
13 which requires him to explain his model structure.
14

15 61. For these reasons, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
17 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
18 and appeals the Examiner’s denial of that motion.
19
20
21
22
23
24
25
26

27
28
29
30
31
32
33
34
35
36
37
38
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

62. Finally, Taxpayer’s properties are not appurtenant—or even in close proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of proving special benefit” shifted to the City because the protestors’ parcels merely stood “in close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s properties are not even within 500 road network feet from the core “park” improvements. And, as described above, the special assessment is overstated because the Final Study makes no attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or special detriments. In addition, it is speculative due to the fact that, as of October 2019, improvements were not in place—and, in fact, much of the waterfront is a construction zone following removal of the viaduct and now Pier 58 demolition. Under these circumstances, rather than relying on entirely imaginary income and shaky hypotheticals, Mr. Macaulay at the very least should have discounted the special benefit estimates or waited to perform the Study until the improvements were at least close to complete.

Erroneous Pre-Improvement Valuation

63. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's properties as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's properties.

64. The City's Final Study was used to compute the proposed final assessment of Taxpayer's properties. The City's Study purportedly uses data from the King County Department of Assessments,¹¹ but the pre-improvement valuation information in the Final

¹¹ See, e.g., Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet (providing a “County Link” to the King County Department of Assessment’s online “eReal Property” search tool).

1 Study does not accurately reflect this data. The Final Special Benefit Study does not explain
2 this difference—or any differences—between its pre-improvement valuation and its
3 supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the
4 Examiner’s Recommendation.
5
6

7
8 65. Further, the City’s analysis was based on unreliable market data. There was
9 no information about views from 1521 2nd Avenue Units 3800 and 3802, (CWF-0430 and
10 CWF-0431) on King County Assessor’s site even though there are significant views from
11 these properties.¹² This is problematic given that other objectors’ cross-examinations—in
12 particular regarding the Waterfront Landing condos—effectively demonstrated that ABS
13 Valuation made incorrect assumptions about views for a significant number of properties.
14 *See, e.g.*, 6/25/2020 Hrg. Tr. at 87:18-88:1; 89:7-91:23; 95:2-10; 97:2-99:14; 100:24-101:13
15 (for the Waterfront Landing, ABS Valuation did not discount for view blockages in the
16 Before condition as a result of the Pine Street Connector and instead simply assigned per
17 square foot values in \$25 increments based on incorrect assumptions about corner units and
18 units on higher floors).
19
20

21 66. Thus, aside from multiple other reasons why computation of the special
22 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
23 improvement values that do not accurately reflect market data. For these reason, Taxpayer
24 appeals the Examiner’s recommended denials on page 106 of the Examiner’s
25 Recommendation.

47 <https://blue.kingcounty.com/Assessor/eRealProperty/Detail.aspx?ParcelNbr=2538831480>.

Erroneous Computation of Special Benefit

67. “Special benefit” is “the increase in fair market value attributable to the local improvements.” *Doolittle*, 114 Wn.2d at 103. “A benefit that a particular piece of property may receive by reason of the improvement is not measured alone by the physical character or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is the particular tract or property benefited by the entire improvement, and is it assessed proportionately with the other property included within the assessment district?” *Id.* 165–66.

68. The proposed final assessment erroneously overstates the special benefit of LID improvements in a number of ways.

69. Arbitrary assignment of special benefit. The City’s Study computed the proposed final assessment by multiplying the market value of the property without the LID improvements by 2.7%, which the City contends represents the estimated special benefit of the LID improvements applicable to all condo owners in Taxpayer’s building. However, there is no analysis and no documentation on how general principles articulated in the studies translated into the specific property value increase for Taxpayer’s properties.

70. It also bears noting that any “internal review” of the special benefit estimates would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of error. Indeed, given all the same information, he seemed to suggest that it would be perfectly reasonable for another experienced appraiser to come up with special benefit estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact same quality of data to be 50% off). Ultimately, his repeated insistence that there is no

1 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
2 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
3 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
4 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
5 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
6 special because it is arbitrarily assigned; and it is too small to realistically be supported by
7 appraisal techniques.
8

9
10 71. No evidence of special benefit. Meanwhile, there is “no actual evidence from
11 any seller or purchaser that the price was higher because of the LID improvements.”
12 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
13 identified any seller or buyer, or any particular property where the existence of the LID
14 improvements had an effect on the market price.” *Id.* at 410-11. Taxpayer has explained
15 that the property has not increased in value due to the forthcoming LID Improvements,
16 because, among other reasons, the improvements ABS believes will generate value do not
17 exist, and will not for a number of years to come. There are no comparable sales because
18 the LID Improvements are not in place, nor will they be until the end of 2024 if completed
19 on schedule.
20

21
22 72. The fair market values of Taxpayer’s properties have not changed due to
23 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
24 benefited from installation of new water main and fire hydrant where it was already
25 adequately supplied with water and afforded adequate fire protection). As explained above,
26 both units face west and already have full westerly views. And because the building
27 purchased the space to the west, the view is protected from further development. Unit 3802
28 also has a south-facing view of Mt. Rainer, the stadiums, and south Seattle. Unit 3800 has a
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 north-facing view as well. Instead of increasing waterfront views, the Waterfront LID
2 improvements may actually decrease value of these units due to worse looking views during
3 construction and more difficult views for the future due to lighting.
4
5

6 73. There is no special benefit because LID improvements in fact diminish the
7 value of Taxpayer's properties due to construction, increased traffic, decreased access to
8 existing businesses and restaurants (especially during construction), potential increase in
9 crime and sanitation issues due to the City's failure to maintain the park, and decreased
10 parking availability. *See Kusky*, 85 Wn. App. 493 (testimony of owners' expert that LID
11 actually diminished value of property was sufficient to rebut presumption that assessment
12 was proper). Moreover, for Taxpayer's properties, the improvements will more than likely
13 make waterfront access worse, first during the years of construction and then further by
14 creating structures, trees, etc., where access is currently unimpeded.
15
16

17 74. The assessment formula is an attempt to distribute costs that do not relate to
18 special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be "merely a
19 mathematical model that distributes costs").
20
21

22 75. The Special Benefit Study fails to address whether the \$346,000,000
23 estimated LID project cost takes into account the investment that would have occurred in the
24 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
25 invested. This is a critical component of estimating which properties receive a direct benefit
26 from the improvements, versus more incidental benefits further from the park.
27
28

29 76. The proposed final assessment substantially exceeds the special benefit to the
30 property and is disproportionate to similarly situated properties within the LID. For these
31 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47 Sections II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.15.

State Environmental Policy Act and Other Environmental Permitting

77. While this appeal is not challenging the City's environmental review and permitting processes, those processes are relevant in determining the legality of the assessments, and to assessing the delivery risk, the present value of the City's plans, and ultimately the amount of the assessment. If the roll is finalized, the City will commit to pursue projects that have not yet undergone environmental review (thus limiting the choice of reasonable alternatives to those projects). For example, if the roll is finalized, the City is committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63) is just beginning. Further, the City has segmented environmental review, and still has a gauntlet of federal, state and tribal review processes to complete before it will be clear what the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b), SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and committing to reconstruction of Pier 58 and major street improvements without environmental review, or the City's Final Special Study has improperly included and is proposing to assess the Taxpayer the costs and special benefits of improvements that may not get built. Either way, it is faulty process.

Due Process Rights

78. The City's failed to notify Taxpayer sufficiently in advance of the hearing to allow Taxpayer to obtain evidence and prepare to properly challenge the assessments. Because LID assessments involve a deprivation of property, affected owners have the right to a hearing as to whether the improvement resulted (or will result) in special benefits to their properties and whether their assessments are proportionate, which necessarily includes

1 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
2 555, 569–70, 229 P.3d 761 (2010).
3

4 79. The LID statute specifies that cities must mail notices giving the time and
5 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
6 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
7 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
8 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
9 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
10 secure their own appraisal), evaluate proportionality of the proposed assessments, and
11 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
12 for anybody to get an appraisal”).
13
14

15 80. The City’s Notice of Assessment was sent on December 30, 2019. And the
16 Final Special Benefit Study has only been available for public review since January 7, 2020.
17 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
18 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
19 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
20 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
21 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
22 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
23 the Examiner’s Recommendation: I.B.
24
25

26 **VII. Relief Requested**

27 Taxpayer respectfully requests that the City Council:

- 28 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
29
30 and
31
32

- 1 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
2 assessment dated December 30, 2019; or
3
4
5 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
6 proposed final assessment to \$0 (zero), or such amount as Taxpayer
7 establishes at the hearing in this matter; or
8
9
10 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
11 and reduce Taxpayer's assessment using recognized appraisal techniques
12 consistent with USPAP and:
13
14
15 i. Excluding any property value increase attributable to viaduct removal
16 and other planned WSDOT Improvements;
17
18 ii. Taking into account the effects of the COVID-19 pandemic on the
19 value of Taxpayer's property and other relevant developments since
20 October 2019;
21
22 iii. Accounting for and excluding (1) any special benefits from existing
23 or planned improvements that already provide similar benefits to
24 Taxpayer's property, and (2) any special detriments from construction
25 and other anticipated LID-related disamenities;
26
27 iv. Accounting for and including only those actual benefits anticipated to
28 accrue to Taxpayer's property based on its location relative to Pier 58,
29 Overlook Walk, and the Promenade, and specific elements of the LID
30 Improvements;
31
32 v. Discounting anticipated special benefits to present value, based on
33 reliable estimates regarding when special benefits will start accruing
34 following completion of the LID Improvements; and
35
36
37
38
39
40
41
42
43
44
45
46
47

1 vi. Accounting for such other issues specific to Taxpayer's property
2
3 relevant to calculation of such assessment; and
4

5 2. Grant such further relief as the City Council deems just and proper.

Facsimile: 206.359.9000

24
25
26 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

27 RRRR Investment LLC is the taxpayer for the property that is subject to the
28
29 proposed final assessment described in Section IV.
30

31 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
32 include additional arguments relevant to the revised Final Recommendations of the Hearing
33 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
34 objection to the assessment, which was based on the Final Study. Taxpayer further timely
35 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
36
37 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
38 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
39 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
40
41
42
43
44
45
46
47

1 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
2 as authorized by the Hearing Examiner, including without limitation all records pertaining to
3 the November 2020 through February 2021 remand hearing ordered by Council.
4
5

6
7 **IV. Amended Arguments on Appeal**
8

9 RRRR Investment LLC supplements its appeal of the Hearing Examiner's
10 recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local
11 Improvement District No. 6751 proposed final assessment dated December 30, 2019 against
12 the following property:
13
14
15

16 King County Parcel No. 2538831460
17 Site Address: 1521 2nd Ave., Unit 3800 Seattle, Washington 98101
18 Proposed Final LID Assessment for Parcel: \$41,245
19

20 King County Parcel No. 2538831480
21 Site Address: 1521 2nd Ave., Unit 3802, Seattle, Washington 98101
22 Proposed Final LID Assessment for Parcel: \$44,084
23
24

25 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
26 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
27 amended appeal.
28
29

30
31 **A. The Anticipated Special Benefits to Taxpayer's Property should be**
32 **Discounted to Present Value and Assessments Adjusted as Appropriate**
33

34 On remand, the City's appraiser acknowledged that special benefits to parcels can be
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
37 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
38 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
39 the theatre parcel is too remote to support a current assessment. *Id.* The Examiner accepted
40 that recommendation. The City's appraiser further acknowledged that benefit reductions
41
42
43
44
45
46
47

1 due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined by
2 discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
3
4 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
5 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
6
7 calculations to present value because the general benefits are not anticipated from the LID
8
9 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
10
11 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
12
13 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
14
15 benefit calculation, and related assessments, to account for the delay between the assessment
16
17 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
18
19 standard appraisal practice, and renders the other proposed Waterfront LID special
20
21 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
22
23 “fundamentally wrong methods.”
24
25

26 All special benefit taxes assessed by a municipality must be based on “actual,
27
28 physical and material [special benefits that are] not merely speculative or conjectural.”
29
30 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
31
32 Additionally, the assessments may not materially exceed the actual special benefit conferred
33
34 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
35
36 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
37
38 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
39
40 discount benefits the City estimated would accrue to the properties from improvements to be
41
42 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
43
44 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
45
46 property while treating all or most others (including Taxpayer’s) differently, and
47

1 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
2 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
3 for some properties because the benefits are too distant, while assessing other properties as
4 though distant benefits have already been secured. As Taxpayer identified in its September
5 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
6 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
7 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
8 reject the improper calculation of the benefit or remand and require the appraiser to discount
9 the benefits to net present value.
10
11
12
13
14
15
16
17

18
19 **B. In Light of Covid's Continuing Impact on Taxpayer and other**
20 **Downtown Property Owners and other Material Changes Since October**
21 **2019, the LID Should be Cancelled, or at Least Assessments**
22 **Recalculated, to take Into Account Property Value Reductions**
23

24 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
25 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
26 other relevant developments since October 2019." When Washington's first COVID
27 restrictions were imposed in March and April 2020, there was an assumption that they
28 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
29 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
30 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
31 gotten much worse. Residential values have also dropped. Specifically, Taxpayer's Parcel
32 No. 2538831480, after a real estate appraisal and pocket listing the property in July 2020,
33 the value has gone down over \$1 million US Dollars. Concerns of safety and overall
34 vacancy rates, both residential and commercial, have been cited as the cause. The City has
35 already imposed higher minimum wages and taxes on businesses to try to fund recovery.
36
37
38
39
40
41
42
43
44
45
46
47

1 The West Seattle Bridge and other bridges are in immediate need of repairs and
2 maintenance. Pier 58, instead of the vibrant waterfront park hypothesized in the City's
3 appraisal to exist as of October 2019, collapsed, and is several years from completion, as a
4 best case. In current circumstances, a downtown tax to fund new, non-essential park
5 improvements against financially strapped taxpayers, and likely passed through to
6 financially strapped tenants and customers would be unfair to taxpayers and a misallocation
7 of city resources. COVID threw everyone for a loop. But as the City rethinks its budget
8 priorities for the next few years, and its potentially funding sources, Taxpayer respectfully
9 requests that the City dissolve the assessment, at least until property owners and businesses
10 have a chance to recover, and that any assessment take into account the changed
11 circumstances since this appeal process started on February 4, 2020 to avoid unnecessarily
12 and perhaps permanently killing downtown properties and businesses in the name of
13 bettering them.
14
15
16
17
18
19
20
21
22
23
24
25

26
27 **V. Relief Requested**

28 Particularly in light of the Committee's decision not to take further comment from
29 appellants, Taxpayer respectfully request that each Committee member carefully review the
30 full record transmitted to Council before voting on Taxpayer's appeal.
31
32
33

34 RRRR Investment LLC respectfully reiterates its request from the September 22,
35 2020 appeal that the City Council:
36
37

- 38 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection; and
39

41 final assessment dated December 30, 2019; or
42
43 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
44 proposed final assessment to \$0 (zero), or such amount as Taxpayer
45
46
47

1 establishes at the hearing in this matter; or

2
3 c. Remand the matter to the Hearing Examiner or City appraiser to
4 recalculate and reduce Taxpayer's assessment using recognized appraisal
5 techniques consistent with USPAP and:
6
7

- 8
9 i. Excluding any property value increase attributable to viaduct
10 removal and other planned WSDOT Improvements;
11
12 ii. Taking into account the effects of the COVID-19 pandemic on
13 the value of Taxpayer's property and other relevant
14 developments since October 2019;
15
16 iii. Accounting for and excluding (1) any special benefits from
17 existing or planned improvements that already provide similar
18 benefits to Taxpayer's property, and (2) any special detriments
19 from construction and other anticipated LID-related
20 disamenities;
21
22 iv. Accounting for and including only those actual benefits
23 anticipated to accrue to Taxpayer's property based on its
24 location relative to Pier 58, Overlook Walk, and the
25 Promenade, and specific elements of the LID Improvements;
26
27 v. Discounting anticipated special benefits to present value,
28 based on reliable estimates regarding when special benefits
29 will start accruing following completion of the LID
30 Improvements; and

27 Facsimile: 206.359.9000
28

29
30 **III. Statement of Taxpayer's Interest**
31

32 RRRR Investment LLC is the taxpayer for the properties that are subject to the
33 proposed final assessment described in Section IV. The properties are two high-end
34 residential condominiums at 1521 2nd Avenue, Seattle, WA.
35

36
37 The basis of the proposed assessment is a Final Special Benefit/Proportionate
38 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
39 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
40 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
41 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
22
23 was based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Taxpayer appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 2538831460
34 Site Address: 1521 2nd Ave., Seattle, Unit 3800, Washington 98101
35 Proposed Final LID Assessment for Parcel: \$41,245

36
37 King County Parcel No. 2538831480
38 Site Address: 1521 2nd Ave., Seattle, Unit 3802, Washington 98101
39 Proposed Final LID Assessment for Parcel: \$44,084

40
41 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
42
43 the evidence and arguments raised before the Hearing Examiner into this appeal. In
44
45 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
46
47 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4
5 As discussed more fully below, Taxpayer specifically appeals the following Findings
6 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
7
8 Pages 61-62, 106, Sections II.6, II.7, II.12, II.14, II.18, II.19, II.20, II.21, II.22, II.23, II.24,
9 II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3, IV.B.4,
10 IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
11 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.11,
12 IV.C.12, IV.C.14, IV.C.15, IV.C.18
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38

39
40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$105,265 for Unit 3800 and \$115,547 for
34 Unit 3802, assuming the LID Improvements were in place and providing benefit in
35 October 2019. However, the LID Improvements will not be completed until the end of
36 2024 if the City meets its current schedule, and many of WSDOT’s alternative
37 improvements will not be built. The present value of future improvements deliverable in
38 five years is significantly lower than the current value of improvements that already exist.
39 Further, ABS’s own materials show that benefits may not accrue for at least five years
40 after they are completed, in 2029. If the hypothesized special benefits are discounted to
41 present value, the assessments materially exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” See Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
2 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
3 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
4 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
5 Final Study fails to meet basic standards for admissibility and must be remanded.
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6
7 **V. Standard of Review**
8

9 “When considering the assessment roll, the city council sits ‘as a board of
10 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
11 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
12 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
13 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
14
15

16 The proposed assessments are presumed correct, “unless overcome by clear, cogent
17 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
18 than the heightened presumption of correctness on judicial appeal because “applying these
19 elevated standards at the municipal hearing would afford unwarranted deference to a report
20 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
21 presumption is not evidence and its efficacy is lost when the other party adduces credible
22 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
23 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
24 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
25 presented credible evidence showing that the City’s proposed assessment is arbitrary,
26 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
27 to the City to prove the assessments are actual, measurable, special, non-speculative and
28 proportionate. The City failed that burden.

46
47

1 **VI. Grounds for Appeal**

2 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
12 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
13 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
14 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
15 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
16 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
17 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
18 provided expert opinion showing that improvements actually diminished value of the
19 property). In fact, no independent evidence is required at all if, for example, objectors show
20 that the assessment was grounded on a fundamentally wrong basis due to an error in the
21 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
22 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
23 a property owner could simply point out that the square footage assumed in the City's
24 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
25 Examiner's Recommendation: Sections II.12, II.14, IV.A, IV.B.11(a), IV.C.2, IV.C.8, and
26 IV.C.11.
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

2 2. RCW 35.43.040 provides cities and towns authority for ordering local
3
4 improvements and for levying and collecting special assessments “on property specially
5 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed
6
7 upon all the property in accordance with the special benefits conferred thereon.” RCW
8
9 35.44.010.
10

11 3. No analysis of general benefits. Special assessments have been “held valid
12
13 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
14
15 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
16
17 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
18
19 they are for the construction of local improvements that are appurtenant to specific land and
20
21 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
22

23 4. Taxpayer’s properties are not specially benefited by the LID Improvements.
24
25 The primary purpose and effect of the LID Improvements are to benefit “members of the
26
27 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
28
29 library is for the benefit of the members of the whole community individually and
30
31 collectively who may be served by it”). Mr. Macaulay’s own chapter of the LID Manual
32
33 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
34
35 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
36
37 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
38
39
40
41

42
43 ² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 that if an appraiser “identifies both general and special benefits, these benefits should be
2 clearly distinguished and explained, and only special benefits should be included in the
3 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
4
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6
7 183:4. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
8
9 including those arising from construction necessary to meet basic design standards. *See*
10
11 Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
12
13 construction costs related to meeting design standards which may be general benefits as
14
15 distinct from construction costs emanating from requirements of the LID project”). To the
16
17 extent Taxpayer’s properties may benefit from the LID improvements, the benefit is general
18
19 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
20
21 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
22
23 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.
24
25

26 5. LID Improvements not necessary. Unlike typical LID projects, the
27
28 Waterfront LID improvements are largely unnecessary to the functionality of any particular
29
30 property, including Taxpayer’s properties. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
31
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33
34 held invalid where owners would have benefitted equally from increase of only 9 feet);
35
36 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
37
38 intersection for new water main for hydrant held invalid because land was already afforded
39
40 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
41
42 not necessary their properties, which already have sufficient access to the waterfront,
43
44 downtown restaurants, and other amenities. *See* 3/12/2020 Hrg. Tr. (B. Madsen) at 107:15-
45
46 108:12. Specifically, waterfront access is readily available via Pike’s Place or the walkway
47

1 at the Four Seasons. *Id.* And the testimony established that the building already owns the air
2 space to the west and the units are on the 38th floor, so adding a streetscape/park along the
3 waterfront does little to add to their western view which looks toward the water and the
4 Olympic mountains. *Id.* at 105:8-17.
5
6

7
8 6. The fact that there is no case law differentiating between binary
9 improvements and parks does not change the law prohibiting assessments on properties
10 already adequately served by existing amenities. *See* Examiner's Recommendation at
11 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
12 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
13 reasoning excuse the City's failure to account for existing amenities as part of the special
14 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
15 the incremental effect of new park improvements on the value of properties, much like
16 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
17 (Crompton's Report) at 12-13.
18
19

20
21 7. To the extent benefits can be considered "special" as opposed to general, they
22 are nominal or nonexistent for many properties even in the Central Waterfront, which
23 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
24 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
25 change due to expansion of sewer service *near* owners' parcel which were already
26 connected). Here, as mentioned above, the views from these units is already protected and
27 Taxpayer testified that during the years of construction, there could in fact be a tremendous
28 devaluation in the views. 3/12/2020 Hrg. Tr. (B. Madsen) at 108:13-23. Even if the City
29 could assess for a view change (and it has promised not to assess for viaduct removal), the
30 fair market values of Taxpayer's properties have not changed because the LID
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Improvements have not improved the properties' waterfront view or access to the
2 waterfront, nor will they when the City anticipates completion in 2024. For these reasons,
3 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
4 IV.C.3, IV.B.9, and IV.C.3.
5
6

7
8 8. No analysis of special detriments. The Final Study fails to properly account
9 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
10 owners for removal and cleanup of underground storage tanks discovered during the
11 improvement project). Mr. Madsen testified that the only potential impacts from the LID
12 Improvements are negative—e.g., noise and disruption from four years of construction,
13 increased potential for crime and homelessness, and increased congestion from tourism and
14 loss of parking. 3/12/2020 Hrg. Tr. (B. Madsen) at 109:3-111:21. And Mr. Shorett
15 explained that the property value of these units are not likely to increase due to the LID
16 Improvements because buyers of luxury residential properties are more concerned with the
17 amenities of the property itself, including the views which are already protected. *Id.* at
18 15:12-16:8.
19
20

21 9. Although Mr. Macaulay claims he analyzed impacts on the City's planned
22 elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation of how
23 lost parking might be a detriment, and no property-specific parking analysis in any of his
24 materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg. Tr. at
25 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
26
27

28 10. Likewise, there was no analysis of the risks associated with disamenities such
29 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
30 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
31 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
2 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
3 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
4 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
5 the maintenance agreement. *Id.* at 13:4-14:2.
6
7
8
9

10 11. There was also no consideration of negative impacts from another four-plus
11 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
12 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
13 law allowing him to dismiss these actual, non-speculative impacts. Because future special
14 benefits calculations are inherently speculative, Washington's eminent domain statute
15 specifically allows condemnees to postpone special benefits assessments until improvements
16 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
17 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
18 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
19 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
20 Greenway, the Greenway district "significantly" lagged in value).
21
22
23
24
25
26
27
28
29
30
31

32 12. For these reasons, Taxpayer appeals the following portions of the Examiner's
33 Recommendation: Sections II.25, IV.B.8, and IV.B.9.
34
35
36

37 13. Special benefit estimate is speculative. When calculating a special benefit,
38 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
39 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp. 6097*, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4
5 14. Assuming without conceding that one day, the City’s planned LID
6
7 Improvements might increase the value of neighboring properties to some extent, that
8
9 potential benefit is many years away and speculative. While appraisers tolerate some degree
10
11 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
12
13 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
14
15 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
16
17 the level of precision implied in the Final Study due to the size of the LID and use of
18
19 hypotheticals).
20

21 15. Although LIDs are sometimes finalized prior to completion of improvements,
22
23 this is typically just six month or a year prior, and the assessments are otherwise supported
24
25 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
26
27 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
28
29 will not be realized for four or five years. In the meantime, there is permitting risk,
30
31 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
32
33 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
34
35 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
36
37 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
38
39 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
40
41 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
42
43 market value would be as of the date the project would be finally constructed” because
44
45 “[t]here could be a lot of elements in the market that did occur between now and then that
46
47 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if

1 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
2 fluctuate over time” and “I can’t predict the future”).

3
4
5 16. The record is clear that while no one can know what “special benefit” might
6 accrue to these properties in four years (if any), we do know that there are no actual benefits
7 now. The LID improvements provide no immediate special benefit to property owners
8 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
9 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
10 sewer system for future users). For example, notwithstanding the questionable hypothesis
11 that residential condominiums will benefit from an expected increase in tourism (higher
12 room rates or occupancy) when the improvements are complete, it is undisputed that tourists
13 are not coming in larger numbers now because of something happening five years down the
14 road. *Cf. O’Connor Decl. ISO Closing Stmt.*, ¶ 7 (dated 7/7/2020) (no apartment leased
15 today for 18 months would rent at a higher rate due to improvements coming in 2024).
16

17
18 17. Further, there are no “plans and specifications” on file with the Clerk’s Office
19 for the LID Improvements, and it is unlawful to move to final assessments without such
20 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
21 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
22 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
23 dollars on projects still early in the design process. *See* Washington Attorney General
24 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
25 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
26 of programs and included “only so much of the overall costs” that took place within and
27 benefitted the assessed properties).
28
29
30
31
32
33

35
36
37
38
39
40
41
42
43
44
45
46
47

18. The COVID-19 crisis highlights how fundamentally speculative and unfair it would be to base a special benefit assessment on twin 2019 hypotheticals for improvements anticipated to be delivered five years later. Even before COVID, it was speculative to assume that market highs experienced in October 2019¹ would be sustained through 2024, after an already extraordinarily long expansion period. *See, e.g.*, 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was that the market was going to continue to go up.” *Id.* There is no basis for assuming that values hypothesized in October 2019 will remain relevant; they are already irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019 (*see* Examiner’s Recommendation at 109), the pandemic has impacted *current* values and rendered the hypothetical October 2019 Final Study valuations outdated.

19. As another example of how future events could affect the accuracy and reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing Examiner re-open the record to allow the City to explain whether the assessments against property owners within the LID are, in fact, being used by the City to fund the emergency dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use

⁴ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King 5, Aug. 15, 2020), available at <https://www.king5.com/article/news/local/seattle/seattle-mayor-approves-emergency-dismantling-of-waterfront-pier-58/281-f6b7c7d0-78f2-4826-97c8-0b60d4097aa3>; *See* Aug. 21, 2020 Memo from R. Holtz et al. to L. Arber re HPA Request for Pier 58 (Waterfront Park) Emergency Demolition Project, available at <https://www.govonlinesaas.com/WA/WDFW/Public/EnSuite/Shared/pages/util/StreamDoc.ashx?query=UxFpa3XqI8020u5QdalfpJXX0C+FjfKT5/OpyMkto74=>; *see also* Aug. 13, 2020 Ltr. from H. Burton to D. Graves et al. re Review of Pier 58 Movement Observation Report & Recommendations,

1 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10 20. There is also no certainty the improvements will be delivered on time. Mr.
11 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
12 delay in construction schedule would not constitute a “material change” under the City
13 Council’s ordinance authorizing the improvements. In other words, the City cannot
14 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
15 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
16 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
17 potential delays and project changes inherent in those processes, that call into question the
18 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
19 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
20 Decl., dated 4/15/2020).
21
22
23
24
25
26
27
28
29
30
31

32 21. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
33 he could not point to a single one where the assessment roll was finalized five years in
34 advance of the anticipated project completion. See 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
35 he has never recommended final special assessments based on designs less than 30 percent

1 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
2
3 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
4
5 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
6
7 at 66:17-25. He performed no independent due diligence to determine the reliability of the
8
9 City’s estimates for completion of the LID Improvements, or to ensure that proposed
10
11 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
12
13 agreed that if any of his assumptions are incorrect, his opinion of market value would need
14
15 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
16
17 68:11-18.

18
19 22. The City has cited no authority—and Taxpayer is aware of none—that
20
21 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
22
23 assess taxes for “actual” special benefits that will not accrue for another five years (if all
24
25 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
26
27 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
28
29 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
30
31 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
32
33 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
34
35 IV.C.14, and IV.C.18.

36
37 23. Failure to discount special benefit estimates to account for risks and present
38
39 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
40
41 have accounted for risks associated with delivery of the improvements (including permitting
42
43 risk, construction risk, general economic risk) and any special damages associated with
44
45 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
46
47 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the

1 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
2 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
3 the impact of future conditions [through] discounted cash flow analysis.”).
4

5
6 24. Mr. Macaulay acknowledged that appraisers can discount the value of a
7 future condition not in place at the date of valuation and can discount for the time value of
8 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
9 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
10 Discounting would also have been consistent with his approach for analyzing special
11 benefits to vacant land. He testified that the difference between similarly situated vacant
12 sites slated for development and already developed sites was that the labor, capital and risks
13 associated with development had not yet been borne for those vacant sites. Therefore, the
14 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
15 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
16 fully permitted, has not completed environmental review, and has not reached full design is
17 presently worth significantly less.
18
19
20
21
22
23
24
25
26
27
28
29

30 25. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
31 present value, an appraiser would consider discount rates for land development to account
32 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
33 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
34 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
35 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
36
37
38
39
40
41
42

43 26. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley’s
44 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
45 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
46
47

1 Ex. A. Notably, this is lower than the City’s proposed \$171,000,000 assessment. Thus,
2
3 ignoring momentarily all of the other methodological and other flaws discussed here and in
4
5 Taxpayer’s case-in-chief, and assuming that the LID Improvements provide special benefits
6
7 as soon as they are complete in 2024, Mr. Macaulay’s hypothetical assessment materially
8
9 exceeds special benefits when reduced to present value. Further, to the extent the City is
10
11 arguing that because they are permitted to assess 100% of the special benefit, the special
12
13 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
14
15 is again wrong. After applying proper discounting, the City’s proposed special benefit
16
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18
19 100% of the total estimated special benefit.

20
21 27. But even the assumption that the LID improvements would deliver benefits
22
23 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
24
25 on. Rather, those studies demonstrate that a discount period of five years is conservative.
26
27 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A’s study
28
29 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay’s backup files)
30
31 indicates that during the construction period, the Greenway district “significantly” lagged in
32
33 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
34
35 “reorientation of development to capture value takes time”—specifically, 12-13 years. *Id.* at
36
37 30-31 (discussing New York City High Line and San Francisco Embarcadero
38
39 improvements). Given the lengthy delay, any prediction of future special benefits is
40
41 speculative, especially during the construction phase where values are likely to decline.
42
43 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
44
45 Improvements take a similarly long period of time after they are complete to start producing
46
47 tangible property value benefits, each additional year of delay results in further discount to

1 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
2
3 A.

4
5 28. Applying the same discounting methods described above and in Mr. Gibbons
6
7 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
8
9 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
10
11 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
12
13 100% assessment should be no more than \$9,915 for 1521 2nd Avenue Unit 3800 (CWF-
14
15 0430) and \$10,884 for 1521 2nd Avenue Unit 3802 (CWF-0431). Anything more would
16
17 permit the City to assess Taxpayer based on a hypothetical assumption that these
18
19 improvements are in place and providing benefit, and ignore the risks, construction
20
21 disamenity, and time value of money that normal appraisal principles would take into
22
23 account. *Id.*, ¶ 20. Proportionality would counsel that the assessment should be only 39.2%
24
25 of that assessment cap, or \$3,887 for CWF-0430 and \$4,266 for CWF-0431.

26
27 29. Attachment B includes four Excel spreadsheets applying these discounting
28
29 methods to Taxpayer's assessments. It is undisputed that special benefits will not actually
30
31 accrue until the LID Improvements are complete in 2024. Accordingly, the first two
32
33 spreadsheets demonstrate that discounting the City's hypothetical October 2019 special
34
35 benefits to present value would reduce Taxpayer's assessment to \$14,151 for Unit 3800
36
37 (CWF-0430) and \$15,124 for Unit 3802 (CWF-0431), exclusive of any other flaws in the
38
39 City's proposed assessment. The third and fourth spreadsheets shows even more drastic
40
41 reductions after taking into account discounting to present value for 10 years (*i.e.*, from 2029
42
43 to account for the time it takes for the improvements to capture property value). After such
44
45 reductions, Taxpayer's assessment would be just \$3,888 (for CWF-0430) and \$4,268 (for
46
47 CWF-0431). These spreadsheets do not address other issues raised by Taxpayer's appeal,

1 but are intended to help demonstrate how unfair and inflated the City's proposed
2
3 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
4
5 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
6

7 **Appraisal and Assessment Calculation Methods Are Flawed**
8

9 30. The "general rule is that each lot, piece, or parcel of land should be assessed
10
11 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
12
13 Wn.2d at 97.
14

15 31. It is proper to sustain a challenge to an assessment, even without the appraisal
16
17 testimony from the owner, where the objector's expert establishes that the assessment was
18
19 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
20
21 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
22

23 32. The City's appraiser purports to utilize the income method of valuation but
24
25 relied on inaccurate revenue and market data, as discussed further below.
26

27 33. The City's appraiser purports to utilize the comparable sales method of
28
29 valuation, but no City witness attempted "to characterize any one, or all of them, as
30
31 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
32
33 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
34
35 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
36
37 characterize any one, or all of them, as comparable to any particular property within the LID").
38
39 And no City witness could explain how specific adjustments were made to these sales to
40
41 account for value increases due to the hypothesized Before and After Improvements. For this
42
43 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
44

45 34. Special assessment improperly includes value lift from the Before
46
47 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any

1 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
2 Improvements, which WSDOT had independently committed to fund. However, Mr.
3 Macaulay did not calculate the actual market value of LID properties in October 2019, and
4 did not separately analyze the hypothetical increase to property values attributable to
5 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
6 current value and then separately calculate a hypothetical "With WSDOT" Before value);
7 *see also* Hamel Decl., ¶¶ 11, 12 (explaining that for condos, the "first task" was to determine
8 current values but not explaining how they included the value of the hypothetical "WITH
9 WSDOT" Before Improvements); Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020);
10 *see also* Gibbons 1/30/2020 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018
11 Letter (attached to Appeal Petition) at 3-4; Shorett Appraisal Review (attached to Appeal
12 Petition) at 2-14. Without any documented basis or support, Mr. Macaulay simply "ma[de]
13 a judgment a call" on what occupancy and rates would have been for the commercial
14 properties assuming all of the WSDOT Improvements are completed as of 2019. Macaulay
15 Depo. at 129:19-130:11. This outright omission precludes any independent evaluation of
16 the true market "Before" values. *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet
17 professional appraisal standards; if an appraiser uses current sales data to infer values, then
18 the appraiser must explain how he analyzed that data and other information to come up with
19 the hypothetical value. 3/3/2020 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not
20 just removal of the viaduct, but also other road, pedestrian and landscaping improvements
21 WSDOT had already committed to make.

22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43 35. However, because Mr. Macaulay testified that he did include some WSDOT-
44 related value-lift in the "Before" values, it follows that part of the special assessment
45 improperly is based on value attributable to the WSDOT Improvements. As shown by
46
47

1 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
2 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
3 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
4 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
5 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
6 to properly exclude the value of Before Improvements from the assessments. For these
7 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
8 Sections II.19, II.29, and IV.B.11(a)(ii)
9

10
11
12
13
14
15
16
17 36. Special benefits were assigned rather than measured. Mr. Macaulay
18 arbitrarily "assigns" special benefits to Before values instead of measuring them for each
19 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
20 Shorette) Hrg. Tr. at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-91:13.
21
22

23
24
25 37. For condos, ABS applied a uniform special benefit percentage to every unit
26 within a condominium building, notwithstanding individual differences among the units.
27 For example, he relied solely on King County Assessor data for information regarding each
28 condo, but for Taxpayer's properties, there was no information about views. Incredulously,
29 at the same time he insisted that the After value for each condo was calculated "parcel-by-
30 parcel" and that the special benefit percentage was simply a reflection of the difference
31 between Before and After values. In fact, there is no real way to check this work or verify
32 his methods because the analysis does not exist either within his report or in the backup data.
33 However, the simple fact that every single condo within a building received the exact same
34 special benefit percentage increase is evidence enough that Mr. Macaulay did not make an
35 individual parcel-by-parcel special benefit analysis. *See* Gibbons Decl. ISO Closing Stmt., ¶
36 6 (dated 7/7/2020).
37
38
39
40
41
42
43
44
45
46
47

1 38. For these reasons, Taxpayer appeals the following portions of the Examiner's
2 Recommendation: Sections II.19, IV.B.11(a)(iii), and IV.C.15.
3

4 39. Special benefit falls within margin of error. The Final Special Benefit Study
5 applies an estimated value enhancement of less than 4%, which is generally within the
6 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
7 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
8 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
9 of one another, this difference is considered reasonable as it falls within the standard margin
10 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
11 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay's micro-special benefit
12 percentages fall far below that 5% margin, "there is no way of authenticating" such
13 incremental changes because "[m]arket forces completely obliterate any tiny little noise
14 factor like that." *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
15 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Yet,
16 Additionally, the fact that "Before" values are also based on a hypothetical that adds some
17 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
18 appraiser to discern the micro-value differences between hypothetical conditions that are so
19 similar (the WSDOT improvements compared to the LID improvements) "verges on being
20 ludicrous." 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
21

22 40. Even if it were possible to accurately tease out such a miniscule hypothetical
23 value change due to improvements coming five years later, experts testified that there is no
24 data to justify the mathematical adjustments—they are just the appraiser's guesses as to
25 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (P. Shorett) Hrg. Tr. at
26 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at 88:21-88:24 ("you cannot measure one percent
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 difference in a high-rise building for this kind of a medium ... it's simply assigned to a
2 before value"). For these reasons, Taxpayer appeals the following portions of the
3 Examiner's Recommendation: II.27 and IV.B.4.
4

5
6 41. No analysis of value increase attributable to individual components of the
7 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
8 percentage difference between hypothetical Before and After conditions. Throughout his
9 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
10 descriptions in the Addenda even though he testified that he relied on these to calculate
11 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
12 someone might be able to determine how he attributed value to After conditions described in
13 the Addenda, he answered that that was "not the scope of the assignment" because he was
14 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
15 that the six components were not actually a continuous project, that he was viewing them
16 together because the City asked him to, and that if he were to view them independently,
17 there was a low probability that properties in the north would specially benefit from
18 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.
19
20

21 42. Not only did he fail to analyze benefits from each of these non-contiguous
22 improvements, his familiarity with descriptions as whole was tenuous at best. See, e.g.,
23 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
24 arose from specific Before/After descriptions in the Addenda); cf. *Anderson v. City of*
25 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
26 objectives that guided regulators' assessment of architectural plans for buildings along a
27 "signature street" were so vague that they amounted to ad hoc review based on the
28
29
30
31
32
33
34

37
38
39
40
41
42
43
44
45
46
47

1 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
2 even though he used the renderings as "visual aid[s] in appraising the property in the before
3 and after" to "visually see what the differences would be," he could not explain what
4 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
5 when shown a rendering of a two-lane road going down to one-lane in the After condition
6 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
7 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
8 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
9 could explain the depiction of the same trees in the After condition nearly twice as tall as in
10 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
11 of the Examiner's Recommendation: II.27 and IV.B.4.
12
13
14
15
16
17
18
19
20
21

22 43. Special assessment is not supported by comparable studies, data or reports.
23 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
24 that the LID Improvements will lead to meaningfully increased real estate values for
25 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
26 comparable sales or information from the "over twenty-five studies and reports" to arrive at
27 very precise special benefit increases for the residential condominiums, including
28 Taxpayer's properties. For example, although Mr. Macaulay stated that no single report or
29 study was directly on point due to the unique nature of the LID Improvements (*see, e.g.,*
30
31
32
33
34
35
36
37
38
39

40
41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments
2 in his parcel-by-parcel analysis other than to say that the studies generally provided “some
3 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
4 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
5 similarities and differences between these improvements and the comparable parks he
6 looked at).

7
8
9
10
11
12 44. Ms. Hamel also explained that after considering the “over 25 studies and
13 reports” as background, ABS concluded that there was “no consensus among the many
14 reports reviewed as to a set block or foot radius that should be utilized.” Hamel Decl. at ¶
15 33. So, they “took that information and calibrated it to the LID improvements and
16 conditions in Seattle[.]” *Id.* However, there is no analysis and no documentation on how
17 general principles articulated in the studies translated into specific property value increases.
18 ABS does not explain what the studies indicate should be an outer limit on impacts to
19 property value, and do not explain *how* the different streetscape and “park-like” elements
20 were treated—only that they were treated differently.

21
22
23
24
25 45. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
26 assignment of incremental increase of 0.5% to 4% to property values within the LID.
27 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
28 research misinterprets his work in critical ways, including because the LID Improvements
29 manifest the characteristics of a parkway (not a park), and his research indicates that most of
30 a *park*’s impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
31 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
32 related value increases are in fact smaller; that estimated increases are “best guesses” rather
33 than predictions of property value increases in a particular city; and that percentages do not
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 account for diminishing returns after taking into account water views, which would be the
2 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
3 topography grants most properties in downtown a water view.
4

5
6 46. Rather than addressing Dr. Crompton's critiques, Mr. Macaulay simply states
7 that this was just one source of information that was not entirely relevant because, among
8 other things, Dr. Crompton's research dealt with parks and not streetscapes. However, Dr.
9 Crompton's critiques were based on Mr. Macaulay's own testimony that the core "park"
10 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
11 180:2 (explaining that for purposes of "drawing boundaries around a park" he was
12 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
13 Crompton concluded that 500 feet via road from "park" improvements is just one or two
14 Seattle blocks and that Mr. Macaulay "inappropriately extend[ed] the LID impact
15 significantly beyond that which the park study indicated (even if it was legitimate to use the
16 park review's findings)." Hrg. Exhibit 94 (Crompton's Report) at 7. Indeed, the LID area
17 extends even past 2,000 feet from the core "park" improvements, which is the outer limit of
18 impact applicable to "community parks"—which the LID Improvements are not. *Id.*
19 Taxpayer's properties are not within 500 road network feet from the "park" improvements.
20 See Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
21

22 47. Further, Mr. Macaulay's testimony that he analyzed streetscapes, parkways,
23 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
24 six LID components together as one entity. See 6/23/2020 Hrg. Tr. at 167:15-180:16. And
25 based on the attention given to Dr. Crompton's work in the Final Study and supporting
26 materials, it was clearly an important—if not *the* most important—source of information for
27

46
47

1 estimating special benefits (especially with respect to the condos).⁷ No City witness
2 adequately explained exactly how Dr. Crompton's research informed ABS Valuation's
3 parcel-by-parcel analysis.
4

5
6 48. Ms. Hamel's testimony that Crompton's report is "one of the first studies to
7 look at various correlations between parks and real estate values" and that "his study was
8 cited in many of the research studies and economic reports we reviewed" suggests that
9 without this study, ABS would have little to no basis for the special benefit estimates for
10 condos. Hamel Decl. at ¶ 37 (dated 6/26/2020).
11
12

13 49. The destination parks discussed in the Final Special Benefit Study do not
14 provide reliable, comparable, and valid support for the calculation of special assessments
15 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett's
16 critique of every case study cited concludes the changes to those "dwarf the difference
17 between the before-after condition of the property with LID"); Gibbons 5/2/2018 Letter at 4;
18 Hrg. Exhibit 49 (P. Shorett's Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
19 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
20 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
21 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
22 funded by a LID. And in virtually all of those cases, the park improvements dramatically
23 restored unimproved or blighted areas, and properties evaluated were within two or three
24 blocks of the park.

36
37
38
39
40

41
42 ⁷ Of the 62 files in Mr. Macaulay's "2019 Report Info" folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton's study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 50. ABS’s claimed reliance on three economic studies to support property value
2 increase is also flawed. The HR&A study does not inform what value increases are
3
4 expected from the LID Improvements because it projects increases to tourism from *all* of the
5
6 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
7
8 dissimilar parks in other cities,⁸ making the methodological application to the LID
9
10 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
11
12 conclusion that there would be *no new net visitors* from downtown residents as a result of
13
14 the LID Improvements and could not explain how this impacted his condo analysis.
15
16 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
17
18 Property Values” primarily focused on whether the benefits accrue to the larger community
19
20 rather than properties adjacent to the park. And the 2014 New York City Department of
21
22 Transportation study is not based on real estate transactions and market sales and fails to
23
24 substantiate any link between increased retail sales and property values. Moreover, this
25
26 study only looked at impact either directly abutting the streetscape improvement, or a couple
27
28 hundred feet for plaza-like improvements.
29

30 51. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
31
32 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
33
34 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
35
36 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
37
38 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
39
40
41
42

43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
2 asked whether he considered that HR&A's estimated LID impact is six times greater than
3 TLP's assessment of Seattle's entire park system, his surmised that it was because the
4 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
5 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
6 assumptions to account for this difference, which may be partly explained by the fact that
7 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
8 approximately 3.44% of King County tourists visit Seattle primarily because of the city
9 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
10 waterfront improvements.

20 52. Although proximity to the improvements is a key factor in all of these
21 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
22 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
23 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
24 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
25 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
26 Improvements is approximate 20 acres and it is not a community park.⁹

34 53. There is no explanation in the Final Study or the supporting materials of how
35 the studies or comparable sales were used to derive values for Taxpayer's properties. For
36 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
37 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
38
39
40
41
42

43 ⁹ *See*
44 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
45 connecting Seattle's central waterfront to downtown.").

1 54. Failure to comply with USPAP. Taxpayer's assessment also rests on a
2
3 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
4 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
5 recognized) for developing the MAI standards for mass appraisals, testified that the Final
6
7 Study does not meet mass appraisal standards nor allow for independent assessment of the
8
9 accuracy of Mr. Macauley's conclusions.
10

11
12 55. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
13
14 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
15 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
16
17 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
18
19 testimony suggests that he incorrectly believed that the only difference between direct
20
21 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
22
23 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
24
25 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
26
27 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
28
29 Gordon uses in doing his limited restricted report").
30

31
32 56. But the difference is not only in reporting—mass appraisal techniques must
33
34 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
35
36 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
37
38 parcel approach:
39

40 The mass appraisal technique is an appraisal method used to evaluate
41 a group of properties that are subject to similar market forces as of a
42 certain date through the use of market data, statistical analysis and
43 testing. As a result, the mass appraisal technique does not require or
44 involve analysis of each individual property's specific data.
45
46
47

1 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).

2
3 57. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
4 universe of properties as a given date using standard methodology, employing common data,
5 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
6 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
7 model" is "a mathematical expression of how supply and demand factors interact in a
8 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
9 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
10 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

11
12 58. Regardless of client direction, Mr. Macaulay is required to comply with
13 USPAP. So if, as he determined, a "[p]arcel-by-parcel direct appraisal" would not have been
14 economically feasible because it would have taken "an incredible amount of time and cost"
15 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
16 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 ("performing an
17 individual appraisal of each [condo] parcel would have been cost and time prohibitive").

18
19 59. But Mr. Macaulay's methods fail to comply with USPAP Standards 5 and 6
20 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
21 value, fails to calibrate the model structure to determine the contribution of the individual
22 characteristics affecting value, and does not review the mass appraisal results against actual
23 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
24 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

37
38
39
40
41
42
43
44
45
46
47

¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the relationship between characteristics that affect value, and to calibrate that model to specify how individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-21). The purpose is to rationally determine what characteristics will create value, and by how much.

1 60. Mr. Macaulay explained that factors like “aesthetic change in the area, the
2 proximity to the elements, the increase in market rent, market vacancy changes,
3 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
4 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
5 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
6 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
7 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
8 internal review process. *Id.* at 104:24-105:20. There is no documentation of the “internal
9 review process” for the condos. 6/25/2020 Hrg. Tr. at 165:13-18. And because both the
10 Before and After values were hypothetical, it was not possible to identify matched pair sales
11 and no City witness explained how ABS Valuation made adjustments to “comparable” sales
12 in order to check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6
13 which requires him to explain his model structure.
14

15 61. For these reasons, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
17 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
18 and appeals the Examiner’s denial of that motion.
19
20
21
22
23
24
25
26

27
28
29
30
31
32
33
34
35
36
37
38
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

62. Finally, Taxpayer’s properties are not appurtenant—or even in close proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of proving special benefit” shifted to the City because the protestors’ parcels merely stood “in close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s properties are not even within 500 road network feet from the core “park” improvements. And, as described above, the special assessment is overstated because the Final Study makes no attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or special detriments. In addition, it is speculative due to the fact that, as of October 2019, improvements were not in place—and, in fact, much of the waterfront is a construction zone following removal of the viaduct and now Pier 58 demolition. Under these circumstances, rather than relying on entirely imaginary income and shaky hypotheticals, Mr. Macaulay at the very least should have discounted the special benefit estimates or waited to perform the Study until the improvements were at least close to complete.

Erroneous Pre-Improvement Valuation

63. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's properties as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's properties.

64. The City's Final Study was used to compute the proposed final assessment of Taxpayer's properties. The City's Study purportedly uses data from the King County Department of Assessments,¹¹ but the pre-improvement valuation information in the Final

¹¹ See, e.g., Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet (providing a “County Link” to the King County Department of Assessment’s online “eReal Property” search tool).

1 Study does not accurately reflect this data. The Final Special Benefit Study does not explain
2 this difference—or any differences—between its pre-improvement valuation and its
3 supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the
4 Examiner’s Recommendation.
5
6
7

8 65. Further, the City’s analysis was based on unreliable market data. There was
9 no information about views from 1521 2nd Avenue Units 3800 and 3802, (CWF-0430 and
10 CWF-0431) on King County Assessor’s site even though there are significant views from
11 these properties.¹² This is problematic given that other objectors’ cross-examinations—in
12 particular regarding the Waterfront Landing condos—effectively demonstrated that ABS
13 Valuation made incorrect assumptions about views for a significant number of properties.
14 *See, e.g.*, 6/25/2020 Hrg. Tr. at 87:18-88:1; 89:7-91:23; 95:2-10; 97:2-99:14; 100:24-101:13
15 (for the Waterfront Landing, ABS Valuation did not discount for view blockages in the
16 Before condition as a result of the Pine Street Connector and instead simply assigned per
17 square foot values in \$25 increments based on incorrect assumptions about corner units and
18 units on higher floors).
19
20
21
22
23
24
25
26
27
28
29

30 66. Thus, aside from multiple other reasons why computation of the special
31 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
32 improvement values that do not accurately reflect market data. For these reason, Taxpayer
33 appeals the Examiner’s recommended denials on page 106 of the Examiner’s
34 Recommendation.
35
36
37
38
39
40
41
42
43
44

46 <https://blue.kingcounty.com/Assessor/eRealProperty/Detail.aspx?ParcelNbr=2538831480>;
47 <https://blue.kingcounty.com/Assessor/eRealProperty/Detail.aspx?ParcelNbr=2538831480>.

Erroneous Computation of Special Benefit

67. “Special benefit” is “the increase in fair market value attributable to the local improvements.” *Doolittle*, 114 Wn.2d at 103. “A benefit that a particular piece of property may receive by reason of the improvement is not measured alone by the physical character or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is the particular tract or property benefited by the entire improvement, and is it assessed proportionately with the other property included within the assessment district?” *Id.* 165–66.

68. The proposed final assessment erroneously overstates the special benefit of LID improvements in a number of ways.

69. Arbitrary assignment of special benefit. The City’s Study computed the proposed final assessment by multiplying the market value of the property without the LID improvements by 2.7%, which the City contends represents the estimated special benefit of the LID improvements applicable to all condo owners in Taxpayer’s building. However, there is no analysis and no documentation on how general principles articulated in the studies translated into the specific property value increase for Taxpayer’s properties.

70. It also bears noting that any “internal review” of the special benefit estimates would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of error. Indeed, given all the same information, he seemed to suggest that it would be perfectly reasonable for another experienced appraiser to come up with special benefit estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact same quality of data to be 50% off). Ultimately, his repeated insistence that there is no

1 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
2 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
3 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
4 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
5 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
6 special because it is arbitrarily assigned; and it is too small to realistically be supported by
7 appraisal techniques.
8

9
10 71. No evidence of special benefit. Meanwhile, there is “no actual evidence from
11 any seller or purchaser that the price was higher because of the LID improvements.”
12 *Bellevue Plaza, Inc*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
13 identified any seller or buyer, or any particular property where the existence of the LID
14 improvements had an effect on the market price.” *Id.* at 410-11. Taxpayer has explained
15 that the property has not increased in value due to the forthcoming LID Improvements,
16 because, among other reasons, the improvements ABS believes will generate value do not
17 exist, and will not for a number of years to come. There are no comparable sales because
18 the LID Improvements are not in place, nor will they be until the end of 2024 if completed
19 on schedule.
20

21
22 72. The fair market values of Taxpayer’s properties have not changed due to
23 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
24 benefited from installation of new water main and fire hydrant where it was already
25 adequately supplied with water and afforded adequate fire protection). As explained above,
26 both units face west and already have full westerly views. And because the building
27 purchased the space to the west, the view is protected from further development. Unit 3802
28 also has a south-facing view of Mt. Rainer, the stadiums, and south Seattle. Unit 3800 has a
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 north-facing view as well. Instead of increasing waterfront views, the Waterfront LID
2 improvements may actually decrease value of these units due to worse looking views during
3 construction and more difficult views for the future due to lighting.
4
5

6 73. There is no special benefit because LID improvements in fact diminish the
7 value of Taxpayer's properties due to construction, increased traffic, decreased access to
8 existing businesses and restaurants (especially during construction), potential increase in
9 crime and sanitation issues due to the City's failure to maintain the park, and decreased
10 parking availability. *See Kusky*, 85 Wn. App. 493 (testimony of owners' expert that LID
11 actually diminished value of property was sufficient to rebut presumption that assessment
12 was proper). Moreover, for Taxpayer's properties, the improvements will more than likely
13 make waterfront access worse, first during the years of construction and then further by
14 creating structures, trees, etc., where access is currently unimpeded.
15
16

17 74. The assessment formula is an attempt to distribute costs that do not relate to
18 special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be "merely a
19 mathematical model that distributes costs").
20
21

22 75. The Special Benefit Study fails to address whether the \$346,000,000
23 estimated LID project cost takes into account the investment that would have occurred in the
24 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
25 invested. This is a critical component of estimating which properties receive a direct benefit
26 from the improvements, versus more incidental benefits further from the park.
27
28

29 76. The proposed final assessment substantially exceeds the special benefit to the
30 property and is disproportionate to similarly situated properties within the LID. For these
31 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
32
33
34
35
36
37
38
39
40
41
42

44
45
46
47 Sections II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.15.

State Environmental Policy Act and Other Environmental Permitting

77. While this appeal is not challenging the City's environmental review and permitting processes, those processes are relevant in determining the legality of the assessments, and to assessing the delivery risk, the present value of the City's plans, and ultimately the amount of the assessment. If the roll is finalized, the City will commit to pursue projects that have not yet undergone environmental review (thus limiting the choice of reasonable alternatives to those projects). For example, if the roll is finalized, the City is committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63) is just beginning. Further, the City has segmented environmental review, and still has a gauntlet of federal, state and tribal review processes to complete before it will be clear what the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b), SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and committing to reconstruction of Pier 58 and major street improvements without environmental review, or the City's Final Special Study has improperly included and is proposing to assess the Taxpayer the costs and special benefits of improvements that may not get built. Either way, it is faulty process.

Due Process Rights

78. The City's failed to notify Taxpayer sufficiently in advance of the hearing to allow Taxpayer to obtain evidence and prepare to properly challenge the assessments. Because LID assessments involve a deprivation of property, affected owners have the right to a hearing as to whether the improvement resulted (or will result) in special benefits to their properties and whether their assessments are proportionate, which necessarily includes

1 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
2 555, 569–70, 229 P.3d 761 (2010).
3

4 79. The LID statute specifies that cities must mail notices giving the time and
5 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
6 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
7 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
8 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
9 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
10 secure their own appraisal), evaluate proportionality of the proposed assessments, and
11 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
12 for anybody to get an appraisal”).
13
14

15 80. The City’s Notice of Assessment was sent on December 30, 2019. And the
16 Final Special Benefit Study has only been available for public review since January 7, 2020.
17 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
18 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
19 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
20 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
21 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
22 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
23 the Examiner’s Recommendation: I.B.
24
25

26 **VII. Relief Requested**

27 Taxpayer respectfully requests that the City Council:

- 28 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
29
30 and
31
32

- 1 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
2 assessment dated December 30, 2019; or
3
4
5 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
6 proposed final assessment to \$0 (zero), or such amount as Taxpayer
7 establishes at the hearing in this matter; or
8
9
10 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
11 and reduce Taxpayer's assessment using recognized appraisal techniques
12 consistent with USPAP and:
13
14
15 i. Excluding any property value increase attributable to viaduct removal
16 and other planned WSDOT Improvements;
17
18 ii. Taking into account the effects of the COVID-19 pandemic on the
19 value of Taxpayer's property and other relevant developments since
20 October 2019;
21
22 iii. Accounting for and excluding (1) any special benefits from existing
23 or planned improvements that already provide similar benefits to
24 Taxpayer's property, and (2) any special detriments from construction
25 and other anticipated LID-related disamenities;
26
27 iv. Accounting for and including only those actual benefits anticipated to
28 accrue to Taxpayer's property based on its location relative to Pier 58,
29 Overlook Walk, and the Promenade, and specific elements of the LID
30 Improvements;
31
32 v. Discounting anticipated special benefits to present value, based on
33 reliable estimates regarding when special benefits will start accruing
34 following completion of the LID Improvements; and
35
36
37
38
39
40
41
42
43
44
45
46
47

1 vi. Accounting for such other issues specific to Taxpayer's property
2
3 relevant to calculation of such assessment; and
4

5 2. Grant such further relief as the City Council deems just and proper.

Facsimile: 206.359.9000

24
25
26 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

27 RRRR Investment LLC is the taxpayer for the property that is subject to the
28
29 proposed final assessment described in Section IV.
30

31 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
32 include additional arguments relevant to the revised Final Recommendations of the Hearing
33 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
34 objection to the assessment, which was based on the Final Study. Taxpayer further timely
35 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
36
37 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
38 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
39 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
40
41
42
43
44
45
46
47

1 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
2 as authorized by the Hearing Examiner, including without limitation all records pertaining to
3 the November 2020 through February 2021 remand hearing ordered by Council.
4
5

6
7 **IV. Amended Arguments on Appeal**
8

9 RRRR Investment LLC supplements its appeal of the Hearing Examiner's
10 recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local
11 Improvement District No. 6751 proposed final assessment dated December 30, 2019 against
12 the following property:
13
14
15

16 King County Parcel No. 2538831460
17 Site Address: 1521 2nd Ave., Unit 3800 Seattle, Washington 98101
18 Proposed Final LID Assessment for Parcel: \$41,245
19

20 King County Parcel No. 2538831480
21 Site Address: 1521 2nd Ave., Unit 3802, Seattle, Washington 98101
22 Proposed Final LID Assessment for Parcel: \$44,084
23
24

25 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
26 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
27 amended appeal.
28
29

30
31 **A. The Anticipated Special Benefits to Taxpayer's Property should be**
32 **Discounted to Present Value and Assessments Adjusted as Appropriate**
33

34 On remand, the City's appraiser acknowledged that special benefits to parcels can be
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
37 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
38 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
39 the theatre parcel is too remote to support a current assessment. *Id.* The Examiner accepted
40 that recommendation. The City's appraiser further acknowledged that benefit reductions
41
42
43
44
45
46
47

1 due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined by
2 discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
3
4 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
5 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
6
7 calculations to present value because the general benefits are not anticipated from the LID
8
9 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
10
11 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
12
13 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
14
15 benefit calculation, and related assessments, to account for the delay between the assessment
16
17 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
18
19 standard appraisal practice, and renders the other proposed Waterfront LID special
20
21 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
22
23 “fundamentally wrong methods.”
24
25

26 All special benefit taxes assessed by a municipality must be based on “actual,
27
28 physical and material [special benefits that are] not merely speculative or conjectural.”
29
30 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
31
32 Additionally, the assessments may not materially exceed the actual special benefit conferred
33
34 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
35
36 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
37
38 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
39
40 discount benefits the City estimated would accrue to the properties from improvements to be
41
42 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
43
44 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
45
46 property while treating all or most others (including Taxpayer’s) differently, and
47

1 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
2 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
3 for some properties because the benefits are too distant, while assessing other properties as
4 though distant benefits have already been secured. As Taxpayer identified in its September
5 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
6 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
7 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
8 reject the improper calculation of the benefit or remand and require the appraiser to discount
9 the benefits to net present value.
10
11
12
13
14
15
16
17

18
19 **B. In Light of Covid's Continuing Impact on Taxpayer and other**
20 **Downtown Property Owners and other Material Changes Since October**
21 **2019, the LID Should be Cancelled, or at Least Assessments**
22 **Recalculated, to take Into Account Property Value Reductions**
23

24 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
25 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
26 other relevant developments since October 2019." When Washington's first COVID
27 restrictions were imposed in March and April 2020, there was an assumption that they
28 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
29 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
30 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
31 gotten much worse. Residential values have also dropped. Specifically, Taxpayer's Parcel
32 No. 2538831480, after a real estate appraisal and pocket listing the property in July 2020,
33 the value has gone down over \$1 million US Dollars. Concerns of safety and overall
34 vacancy rates, both residential and commercial, have been cited as the cause. The City has
35 already imposed higher minimum wages and taxes on businesses to try to fund recovery.
36
37
38
39
40
41
42
43
44
45
46
47

1 The West Seattle Bridge and other bridges are in immediate need of repairs and
2 maintenance. Pier 58, instead of the vibrant waterfront park hypothesized in the City's
3 appraisal to exist as of October 2019, collapsed, and is several years from completion, as a
4 best case. In current circumstances, a downtown tax to fund new, non-essential park
5 improvements against financially strapped taxpayers, and likely passed through to
6 financially strapped tenants and customers would be unfair to taxpayers and a misallocation
7 of city resources. COVID threw everyone for a loop. But as the City rethinks its budget
8 priorities for the next few years, and its potentially funding sources, Taxpayer respectfully
9 requests that the City dissolve the assessment, at least until property owners and businesses
10 have a chance to recover, and that any assessment take into account the changed
11 circumstances since this appeal process started on February 4, 2020 to avoid unnecessarily
12 and perhaps permanently killing downtown properties and businesses in the name of
13 bettering them.
14
15
16
17
18
19
20
21
22
23
24
25

26
27 **V. Relief Requested**

28
29 Particularly in light of the Committee's decision not to take further comment from
30 appellants, Taxpayer respectfully request that each Committee member carefully review the
31 full record transmitted to Council before voting on Taxpayer's appeal.
32
33

34
35 RRRR Investment LLC respectfully reiterates its request from the September 22,
36 2020 appeal that the City Council:
37

- 38
39 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection; and
40
41 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
42 final assessment dated December 30, 2019; or
43
44 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
45 proposed final assessment to \$0 (zero), or such amount as Taxpayer
46
47

1 establishes at the hearing in this matter; or

2
3 c. Remand the matter to the Hearing Examiner or City appraiser to
4 recalculate and reduce Taxpayer's assessment using recognized appraisal
5 techniques consistent with USPAP and:
6
7

- 8
9 i. Excluding any property value increase attributable to viaduct
10 removal and other planned WSDOT Improvements;
11
12 ii. Taking into account the effects of the COVID-19 pandemic on
13 the value of Taxpayer's property and other relevant
14 developments since October 2019;
15
16 iii. Accounting for and excluding (1) any special benefits from
17 existing or planned improvements that already provide similar
18 benefits to Taxpayer's property, and (2) any special detriments
19 from construction and other anticipated LID-related
20 disamenities;
21
22 iv. Accounting for and including only those actual benefits
23 anticipated to accrue to Taxpayer's property based on its
24 location relative to Pier 58, Overlook Walk, and the
25 Promenade, and specific elements of the LID Improvements;
26
27 v. Discounting anticipated special benefits to present value,
28 based on reliable estimates regarding when special benefits
29 will start accruing following completion of the LID
30 Improvements; and
31
32 vi. Accounting for such other issues specific to Taxpayer's
33 property relevant to calculation of such assessment; and
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2. Grant such further relief as the City Council deems just and proper.

29 **III. Statement of Taxpayer's Interest**

30 SHG GARAGE SPE owns the property that is subject to the proposed final
31 assessment described in Section IV. The parcel contains the garage that services the Four
32 Seasons Hotel and private residences. The basis of the proposed assessment is a Final
33 Special Benefit/Proportionate Assessment Study for Waterfront Seattle Local Improvement
34 District ("Final Study"), dated October 1, 2019 and prepared by Robert Macaulay with ABS
35 Valuation (the City's appraiser). The Final Study proposes assessments that are purportedly
36 limited to paying for the LID-funded components—namely, the Promenade, Overlook Walk,
37 Pioneer Square Street Improvements, Union Street Pedestrian Connection, Pike/Pine
38 Streetscape Improvements, and Pier 58 (together, the "LID Improvements"). The Final
39
40
41
42
43
44
45
46
47

1 Study purports to exclude charges for other improvement projects in the Central Waterfront,
2 and specifically those WSDOT had already agreed to pay for and construct: viaduct
3 demolition, the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State
4 Route 99 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces
5 WSDOT planned fronting piers between Pike and Madison (together, the “WSDOT
6 Improvements”). But because construction was not complete on the LID Improvements or
7 the WSDOT Improvements at the time the Final Study was prepared, Mr. Macaulay’s
8 October 1, 2019 “Before” and “After” valuations are both based on hypothetical conditions
9 rather than actual facts. On February 4, 2020, Taxpayer timely filed an objection to the
10 assessment, which was based on the Final Study.

20

21 **IV. Matter Under Appeal**

22 SHG GARAGE SPE appeals the Hearing Examiner’s recommendation to deny
23 Taxpayer’s objection to the City of Seattle’s Waterfront Local Improvement District No.
24 6751 proposed final assessment dated December 30, 2019 against the following property:
25
26
27
28

29 King County Parcel No. 6094670010
30 Site Address: 1321 1st Ave, Seattle, Washington
31 Proposed Final LID Assessment for Parcel: \$132,435.84
32

33 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
34 the evidence and arguments raised before the Hearing Examiner into this appeal. In
35 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
36 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
37 supplemental Closing Statement submitted at the close of the City’s case-in-chief (dated
38 7/7/2020).¹

13

14 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
15 recommendations on material issues raised during Taxpayer's appeal that were supported by
16 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
17 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
18 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
19 recommended anything other than denial of objectors' appeals were where the City's
20 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
21 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
22 special assessments based on "fundamentally wrong methods."
23

24 The special benefit for which special taxes are assessed must be "actual, physical and
25 material and not merely speculative or conjectural." *Heavens v. King Cty. Rural Library*
26 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
27 with the law, the assessments may not materially exceed the actual special benefit conferred

Public Works committee secure and provide appellants with such a record, so that the appeals can then be supplemented with that additional information, so as to make the Committee's consideration of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated, citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors retained by Perkins Coie are part of this case file.

1 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
2
3 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
4
5 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
6
7 assessment. In this case, the proposed assessment fails each of the legal requirements for
8
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10
11 fundamentally wrong methods.
12
13

14 **Legal Requirement:** Actual, non-speculative special benefit

15
16 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
17
18 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
19
20 October 2019 (they were not), and an “After” value purporting to assess the value of
21
22 properties with the LID improvements in place at least five years before anticipated
23 completion.

24 **Legal Requirement:** Cannot materially exceed the special benefit

25
26 **ABS Study:** ABS calculates a special benefit of \$338,000 assuming the LID
27
28 Improvements were in place and providing benefit in October 2019. However, the LID
29
30 Improvements will not be completed until the end of 2024 if the City meets its current
31
32 schedule, and many of WSDOT’s alternative improvements will not be built. The present
33
34 value of future improvements deliverable in five years is significantly lower than the
35
36 current value of improvements that already exist. Further, ABS’s own materials show that
37
38 benefits may not accrue for at least five years after they are completed, in 2029. If the
39
40 hypothesized special benefits are discounted to present value, the assessments materially
41
42 exceed the hypothesized special benefits.
43

44 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID

45
46 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
47
prepared his Final Study in October 2019, and the City issued its preliminary roll in
December 2019, COVID devastated downtown hotel and retail properties. The Hearing
Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
and must be based on actual special benefits. While that does not mean ABS’s appraisal

was wrong when completed, values and benefits need to be reanalyzed before assessments are finalized in light of the unprecedented changes to the downtown real property market.

Legal Requirement: Actual benefit that cannot materially exceed special benefit—
Assessment cannot include value attributable to future WSDOT Improvements.

ABS Study: The City’s appraiser asserts that the City is not collecting assessments “based on the value of WSDOT’s planned improvements.” *See* Final Study at 3. However, the City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition, the City’s appraiser increased 2019 property market values as though WSDOT had completed its work by 2019. The proposed assessment is against this hypothetical WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent) higher than actual 2019 market values. The City is collecting an assessment against both the 2019 current values and the phantom 2019 WSDOT market value lift, in direct contravention of law and the City’s promise not to impose an assessment based on the value of viaduct demolition and the other components of WSDOT’s planned work.

Legal Requirement: Benefits must be special, not general

ABS Study: The City’s appraiser fails to determine or explain what general benefits arise due to the LID Improvements. However, the far-reaching and public nature of the improvements make any benefit arising from them general—not special.

Legal Requirement: Benefits must be “physical and material and not merely speculative or conjectural”

ABS Study: Not only are the improvements not yet “physical or material,” but environmental review and permitting for the City’s proposed LID Improvements is not complete, and the LID improvements are not anticipated to be complete until the end of 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in a manner consistent the City’s then-current proposals, which were in many respects merely conceptual designs.

Legal Requirement: Must comply with appraisal standards

ABS Study: ABS’s valuation methodology cannot be tested. It is a hybrid of “Individual” and “Mass” appraisal techniques, but fails to meet USPAP requirements for either. Until the Examiner admonished ABS, ABS even asserted its analysis was “confidential and proprietary.” ABS’s analysis and conclusions can neither be tested nor replicated. The Final Study fails to meet basic standards for admissibility and must be remanded.

Legal Requirement: Actual and measurable special benefit

ABS Study: ABS's proposed assessments are assigned rather than measured, as demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based on a host of "micro-judgments" that are not supported by any documentation, nor capable of replication or quality assurance/quality control. The assessments are undocumented, unreliable, and not supported by empirical studies, data, or reports.

Legal Requirement: Actual and measurable special benefit—Park benefits must be supported by empirical evidence

ABS Study: Dr. John Crompton, the world's preeminent expert regarding the economic value of parks and other public amenities and on whom ABS purported to rely, testified that ABS had completely misapplied his work and dramatically overstated both the distance to which economic benefits might extend from the LID Improvements and the extent of any anticipated benefit within the potentially benefited area.

Legal Requirement: Actual special benefit—Must take into account potential disamenities

ABS Study: The appraiser ignores the negative value impact of five years or more of construction, as well as other potential disamenities associated with public places.

Legal Requirement: Cannot prematurely commit to build

ABS Study: The City has not completed NEPA review or other entitlement process for its Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments are being imposed. But finalizing the roll is a commitment by the City to build the improvements, which is a violation of legal process and commits the City to build things it may not secure permission to build.

In addition to these general objections, there are property-specific issues raised by Taxpayer as to which the Examiner also erred, discussed in the course of the appeal statement below.

1 **V. Standard of Review**

2 “When considering the assessment roll, the city council sits ‘as a board of
3 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
4 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
5 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
6 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
7
8
9

10 The proposed assessments are presumed correct, “unless overcome by clear, cogent
11 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
12 than the heightened presumption of correctness on judicial appeal because “applying these
13 elevated standards at the municipal hearing would afford unwarranted deference to a report
14 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
15 presumption is not evidence and its efficacy is lost when the other party adduces credible
16 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
17 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
18 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
19 presented credible evidence showing that the City’s proposed assessment is arbitrary,
20 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
21 to the City to prove the assessments are actual, measurable, special, non-speculative and
22 proportionate. The City failed that burden.

37

38 **VI. Grounds for Appeal**

39 SHG GARAGE SPE appeals the Hearing Examiner’s Findings and
40 Recommendations on the following grounds.
41
42
43
44
45
46
47

Taxpayer Not Required to Provide A Special Benefit Study

1
2
3 1. Contrary to the Examiner’s findings and recommendations, there is no
4 requirement that experts or property owners provide an alternative special benefit
5 calculation under these circumstances—to do so would also require the same improper
6 speculation the City’s expert engaged in, given the timing and information provided. *See*,
7
8 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
9 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of Brian O’Connor
10 ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: “[W]e have
11 explicitly rejected an argument that, because certain protestors ‘failed to offer expert
12 testimony at the city council hearing[,] the presumptions [in favor of the assessment] were
13 still operative as to their property.’” *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail*
14 *Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskys v. City of Goldendale*, 85 Wn. App. 493,
15 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he provided expert
16 opinion showing that improvements actually diminished value of the property). In fact, no
17 independent evidence is required at all if, for example, objectors show that the assessment
18 was grounded on a fundamentally wrong basis due to an error in the City’s appraiser’s
19 methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of*
20 *Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example, a property owner
21 could simply point out that the square footage assumed in the City’s appraisal was incorrect.
22 For these reasons, Taxpayer appeals the following portions of the Examiner’s
23 Recommendation: Sections II.12 , II.13 , II.14, II.17 , IV.A, IV.B.11(a), IV.C.8, and
24 IV.C.11.
25

31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

2 2. RCW 35.43.040 provides cities and towns authority for ordering local
3
4 improvements and for levying and collecting special assessments “on property specially
5 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed
6
7 upon all the property in accordance with the special benefits conferred thereon.” RCW
8
9 35.44.010.
10

11 3. No analysis of general benefits. Special assessments have been “held valid
12
13 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
14
15 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
16
17 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
18
19 they are for the construction of local improvements that are appurtenant to specific land and
20
21 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
22

23 4. SHG GARAGE SPE’s property is not specially benefited by the LID
24
25 Improvements. The primary purpose and effect of the LID Improvements are to benefit
26
27 “members of the whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain
28
29 that a public library is for the benefit of the members of the whole community individually
30
31 and collectively who may be served by it”). Mr. Macaulay’s own chapter of the LID
32
33 Manual states clearly that appraisers should “[c]onsider general benefits as well as special
34
35 benefits” (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits
36
37 probably accrue to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s
38
39
40
41

42
43 ² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 expert confirmed that if an appraiser “identifies both general and special benefits, these
2 benefits should be clearly distinguished and explained, and only special benefits should be
3 included in the After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020);
4
5
6
7 see also 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at
8 158:13-159:8, 192:8-193:2; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-183:4. It is
9 undisputed that Mr. Macaulay did not analyze or measure general benefits, including those
10 arising from construction necessary to meet basic design standards. See Hrg. Exhibit 117
11 (LID Manual) at 58 (“[c]onsideration may also be given to those construction costs related
12 to meeting design standards which may be general benefits as distinct from construction
13 costs emanating from requirements of the LID project”). To the extent Taxpayer’s property
14 may benefit from the LID improvements, the benefit is general and incidental, and failure to
15 consider general benefits was a fatal flaw in the City’s methodology. For these reasons,
16 Taxpayer appeals the following portions of the Examiner’s Recommendation: Sections
17 IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.
18
19
20
21
22
23
24
25
26
27
28

29 5. LID Improvements not necessary. Unlike typical LID projects, the
30 Waterfront LID improvements are largely unnecessary to the functionality of any particular
31 property, including Taxpayer’s property. See *In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33 held invalid where owners would have benefitted equally from increase of only 9 feet);
34
35
36
37
38 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
39 intersection for new water main for hydrant held invalid because land was already afforded
40 functional hydrant at nearby street).). Here, Taxpayer provided evidence that the LID
41 Improvements are not necessary to the functionality or use of the property as a garage.
42
43
44
45
46
47 Taxpayer provided evidence that this parcel in particular already has sufficient access to the

1 waterfront by stairs adjacent to the property. Hrg. Exhibit 106 (Palladino Decl.). The fact
2 that there is no case law differentiating between binary improvements and parks does not
3 change the law prohibiting assessments on properties already adequately served by existing
4 amenities. See Examiner's Recommendation at IV.C.3 (reasoning that "no case law is
5 provided to support the differentiation between a hardscape benefit and the more ephemeral
6 benefits of park"). Nor does the Examiner's reasoning excuse the City's failure to account
7 for existing amenities as part of the special benefit calculation. As Dr. Crompton testified,
8 existing view amenities may in fact diminish the incremental effect of new park
9 improvements on the value of properties, much like turning on a weak light in an already
10 brightly illuminated room. See Hrg. Exhibit 94 (Crompton's Report) at 12-13.

21 6. To the extent benefits can be considered "special" as opposed to general, they
22 are nominal or nonexistent for many properties even in the Central Waterfront, which
23 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
24 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
25 change due to expansion of sewer service *near* owners' parcel which were already
26 connected). Here, the primary reason users choose this garage is not due to proximity to the
27 waterfront, rather it serves authorized entrants like hotel guests or property owners. Hrg.
28 Exhibit 106 (Palladino Decl.) ¶¶ 11-12. Even if the City could assess for a view change
29 (and it has promised not to assess for viaduct removal), the fair market value of SHG
30 GARAGE SPE's property has not changed because the LID Improvements have not
31 improved the property's waterfront view or access to the waterfront, nor will they when the
32 City anticipates completion in 2024. For these reasons, Taxpayer appeals the following
33 portions of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

1 7. No analysis of special detriments. The Final Study fails to properly account
2
3 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
4
5 owners for removal and cleanup of underground storage tanks discovered during the
6
7 improvement project). Angelica Palladino testified by declaration that if an increase in
8
9 traffic does occur, the garage will be required to increase staff monitoring the space to
10
11 prevent unauthorized entrants and keep the exterior clean. Ms. Palladino testified that an
12
13 additional parking attendant might be necessary to control the use of the garage, which is
14
15 dedicated to servicing hotel patrons and condo owners due to the loss of public parking.
16
17 Hrg. Exhibit 106 (Decl. of A. Palladino), ¶ 12. And Taxpayer does not expect near-term the
18
19 increases assumed in ABS Valuations' spreadsheets or the Final Study. Although Mr.
20
21 Macaulay claims he analyzed impacts on the City's planned elimination of 450 parking
22
23 stalls on a parcel-by-parcel basis, there is no explanation of how lost parking might be a
24
25 detriment, and no property-specific parking analysis in any of his materials. 6/23/2020 Hrg.
26
27 Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg. Tr. at 153:18-154:19 (did not
28
29 actually analyze impact of decreased parking on condos).

30 8. Likewise, there was no analysis of the risks associated with disamenities such
31
32 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
33
34 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
35
36 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
37
38 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
39
40 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
41
42
43
44
45
46
47

1 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
2 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
3 the maintenance agreement. *Id.* at 13:4-14:2.
4

5
6 9. There was also no consideration of negative impacts from another four-plus
7 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
8 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
9 law allowing him to dismiss these actual, non-speculative impacts. Because future special
10 benefits calculations are inherently speculative, Washington's eminent domain statute
11 specifically allows condemnees to postpone special benefits assessments until improvements
12 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
13 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
14 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
15 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
16 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
17 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
18 II.25, IV.B.8, and IV.B.9.
19
20
21
22
23
24
25
26
27
28
29
30
31

32 10. Special benefit estimate is speculative. When calculating a special benefit,
33 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
34 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
35 becomes pure speculation." *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335-36, 324
36 P.2d 1078 (1958)).
37
38
39
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 11. Assuming without conceding that one day, the City's planned LID
2
3 Improvements might increase the value of neighboring properties to some extent, that
4
5 potential benefit is many years away and speculative. While appraisers tolerate some degree
6
7 of estimation and judgment, Taxpayer's expert testified that Mr. Macaulay's Final Study is
8
9 far too speculative to satisfy industry practices and standards. *See. e.g.,* 3/12/2020 (P.
10
11 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
12
13 the level of precision implied in the Final Study due to the size of the LID and use of
14
15 hypotheticals).

16 12. Although LIDs are sometimes finalized prior to completion of improvements,
17
18 this is typically just six month or a year prior, and the assessments are otherwise supported
19
20 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
21
22 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
23
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25
26 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
27
28 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
29
30 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
31
32 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
33
34 there is inherent uncertainty in valuing the future delivery of projects because "we can't read
35
36 the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: "I just don't know what the
37
38 market value would be as of the date the project would be finally constructed" because
39
40 "[t]here could be a lot of elements in the market that did occur between now and then that
41
42 impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
43
44 his estimates will be higher or lower than comparable sales in 2024 because "markets tend to
45
46 fluctuate over time" and "I can't predict the future").
47

1 13. The record is clear that while no one can know what “special benefit” might
2 accrue to these properties in four years (if any), we do know that there are no actual benefits
3 now. The LID improvements provide no immediate special benefit to property owners
4 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
5 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
6 sewer system for future users). For example, notwithstanding the questionable hypothesis
7 that hotels will benefit from an expected increase in tourism (higher room rates or
8 occupancy) when the improvements are complete, it is undisputed that tourists are not
9 coming in larger numbers and paying higher rates now because of something happening five
10 years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23; O’Connor Decl. ISO
11 Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased today for 18 months would rent at
12 a higher rate due to improvements coming in 2024).

13 14. Further, there are no “plans and specifications” on file with the Clerk’s Office
14 for the LID Improvements, and it is unlawful to move to final assessments without such
15 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
16 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
17 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
18 dollars on projects still early in the design process. *See* Washington Attorney General
19 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
20 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
21 of programs and included “only so much of the overall costs” that took place within and
22 benefitted the assessed properties).

23 15. The COVID-19 crisis highlights how fundamentally speculative and unfair it
24 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
25

43
44
45
46
47

1 anticipated to be delivered five years later. Even before COVID, it was speculative to
2
3 assume that market highs experienced in October 2019 would be sustained through 2024,
4
5 after an already extraordinarily long expansion period. *See* 3/3/2020 (A. Gibbons) Hrg. Tr.
6
7 at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my
8
9 analysis in October 2019, who would have thought that this COVID issue would happen?”
10
11 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was
12
13 that the market was going to continue to go up”—in fact, it did not for Taxpayer’s property.
14
15 *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that downtown hotel values had
16
17 already dropped an estimated 10-15% from their October 2019 levels, and occupancy rates
18
19 were at zero or in single digits. *See* Gordon Decl. (dated 4/21/2020) at ¶ 9. Hotels and their
20
21 connected properties like the garage, without guests will derive no benefit, special or
22
23 otherwise, from the planned LID Improvements. And even assuming hotels recover prior to
24
25 2024, there is no basis for assuming that values hypothesized in October 2019 will remain
26
27 relevant; they are already irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated
28
29 7/7/2020). Although COVID does not change actual values as of October 2019 (*see*
30
31 Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
32
33 rendered the hypothetical October 2019 Final Study valuations outdated.

34
35 16. As another example of how future events could affect the accuracy and
36
37 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
38
39 Examiner re-open the record to allow the City to explain whether the assessments against
40
41 property owners within the LID are, in fact, being used by the City to fund the emergency
42
43 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
44

45
46 ⁴ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King
47 5, Aug. 15, 2020), available at <https://www.king5.com/article/news/local/seattle/seattle-mayor->

1 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10
11 17. There is also no certainty the improvements will be delivered on time. Mr.
12 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
13 delay in construction schedule would not constitute a “material change” under the City
14 Council’s ordinance authorizing the improvements. In other words, the City cannot
15 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
16 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
17 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
18 potential delays and project changes inherent in those processes, that call into question the
19 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
20 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
21 Decl., dated 4/15/2020).

47 [waterfront-park/](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/).

1 18. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
2 he could not point to a single one where the assessment roll was finalized five years in
3 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
4 he has never recommended final special assessments based on designs less than 30 percent
5 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
6 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
7 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
8 at 66:17-25. He performed no independent due diligence to determine the reliability of the
9 City’s estimates for completion of the LID Improvements, or to ensure that proposed
10 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
11 agreed that if any of his assumptions are incorrect, his opinion of market value would need
12 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
13 68:11-18.

14 19. The City has cited no authority—and Taxpayer is aware of none—that
15 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
16 assess taxes for “actual” special benefits that will not accrue for another five years (if all
17 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
18 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
19 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
20 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
21 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
22 IV.C.14, and IV.C.18.

23 20. Failure to discount special benefit estimates to account for risks and present
24 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should

1 have accounted for risks associated with delivery of the improvements (including permitting
2 risk, construction risk, general economic risk) and any special damages associated with
3 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
4 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
5 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
6 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
7 the impact of future conditions [through] discounted cash flow analysis.”).
8
9
10
11
12
13
14

15 21. Mr. Macaulay acknowledged that appraisers can discount the value of a
16 future condition not in place at the date of valuation and can discount for the time value of
17 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
18 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
19
20 Discounting would also have been consistent with his approach for analyzing special
21 benefits to vacant land. He testified that the difference between similarly situated vacant
22 sites slated for development and already developed sites was that the labor, capital and risks
23 associated with development had not yet been borne for those vacant sites. Therefore, the
24 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
25 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
26 fully permitted, has not completed environmental review, and has not reached full design is
27 presently worth significantly less.
28
29
30
31
32
33
34
35
36
37

38 22. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
39 present value, an appraiser would consider discount rates for land development to account
40 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
41 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
42
43
44
45
46
47

1 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
2 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
3

4
5 23. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
6 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
7 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
8 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
9 ignoring momentarily all of the other methodological and other flaws discussed here and in
10 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
11 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
12 exceeds special benefits when reduced to present value. Further, to the extent the City is
13 arguing that because they are permitted to assess 100% of the special benefit, the special
14 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
15 is again wrong. After applying proper discounting, the City's proposed special benefit
16 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
17 100% of the total estimated special benefit.
18
19
20
21
22
23
24
25
26
27
28
29

30 24. But even the assumption that the LID improvements would deliver benefits
31 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
32 on. Rather, those studies demonstrate that a discount period of five years is conservative.
33 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
34 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
35 indicates that during the construction period, the Greenway district "significantly" lagged in
36 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
37 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
38 30-31 (discussing New York City High Line and San Francisco Embarcadero
39
40
41
42
43
44
45
46
47

1 improvements). Given the lengthy delay, any prediction of future special benefits is
2 speculative, especially during the construction phase where values are likely to decline.
3
4 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
5
6 Improvements take a similarly long period of time after they are complete to start producing
7
8 tangible property value benefits, each additional year of delay results in further discount to
9
10 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
11
12 A.
13

14
15 25. Applying the same discounting methods described above and in Mr. Gibbons
16
17 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
18
19 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
20
21 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
22
23 100% assessment should be no more than \$31,839.60. Anything more would permit the
24
25 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
26
27 place and providing benefit, and ignore the risks, construction disamenity, and time value of
28
29 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
30
31 would counsel that the assessment should be only 39.2% of that assessment cap, or
32
33 \$12,417.44.
34

35 26. Attachment C includes two Excel spreadsheets applying these discounting
36
37 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
38
39 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
40
41 demonstrates that discounting the City's hypothetical October 2019 special benefits to
42
43 present value would reduce Taxpayer's assessment to \$45,437, exclusive of any other flaws
44
45 in the City's proposed assessment. The second spreadsheet shows even more drastic
46
47 reductions after taking into account: (1) a rough discount for property value loss due to

1 COVID-19; and (2) discounting to present value for 5 years (*i.e.*, from 2024 when the City
2 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
3 the time it takes for the improvements to capture property value). After such reductions,
4 Taxpayer's assessment would be just \$39,757 (for the 5-year discount) or \$10,924 (for the
5 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
6 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
7 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
8 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
9

10 **Appraisal and Assessment Calculation Methods Are Flawed**

11 27. The "general rule is that each lot, piece, or parcel of land should be assessed
12 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
13 Wn.2d at 97.
14

15 28. It is proper to sustain a challenge to an assessment, even without the appraisal
16 testimony from the owner, where the objector's expert establishes that the assessment was
17 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
18 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
19

20 29. The City's appraiser purports to utilize the income method of valuation but
21 relied on inaccurate revenue and market data, as discussed further below.
22

23 30. The City's appraiser purports to utilize the comparable sales method of
24 valuation, but no City witness attempted "to characterize any one, or all of them, as
25 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
26 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
27 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
28 characterize any one, or all of them, as comparable to any particular property within the LID").
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 And no City witness could explain how specific adjustments were made to these sales to
2 account for value increases due to the hypothesized Before and After Improvements. For this
3 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
4

5
6 31. Special assessment improperly includes value lift from the Before
7 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
8 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
9 Improvements, which WSDOT had independently committed to fund. However, Mr.
10 Macaulay did not calculate the actual market value of LID properties in October 2019, and
11 did not separately analyze the hypothetical increase to property values attributable to
12 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
13 current value and then separately calculate a hypothetical "With WSDOT" Before value);
14 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
15 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
16 Petition) at 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without
17 any documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
18 occupancy and rates would have been for the commercial properties assuming all of the
19 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
20 outright omission precludes any independent evaluation of the true market "Before" values.
21 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
22 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
23 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
24 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
25 other road, pedestrian and landscaping improvements WSDOT had already committed to
26 make.
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 32. However, because Mr. Macaulay testified that he did include some WSDOT-
2
3 related value-lift in the “Before” values, it follows that part of the special assessment
4
5 improperly is based on value attributable to the WSDOT Improvements. As shown by
6
7 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
8
9 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
10
11 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
12
13 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
14
15 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
16
17 to properly exclude the value of Before Improvements from the assessments. For these
18
19 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
20
21 Sections II.16, II.19, II.29, and IV.B.11(a)(ii)

22 33. Special benefits were assigned rather than measured. Mr. Macaulay
23
24 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
25
26 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
27
28 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/5/2020 (B.
29
30 O’Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
31
32 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
33
34 commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based adjustments
35
36 on hypothesized very small increases to property revenue and very small reductions to cap
37
38 rates to “calculate” an “After” value due to the coming 2024 LID Improvements.
39
40 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
41
42 “professional judgment” that are neither shown nor replicable.

43 34. For these reasons, Taxpayer appeals the following portions of the Examiner’s
44
45 Recommendation: Sections II.19, II.29, and IV.B.11(a)(ii)
46
47

1 35. Special benefit falls within margin of error. The Final Special Benefit Study
2 applies an estimated value enhancement of less than 4%, which is generally within the
3 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
4 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
5 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
6 of one another, this difference is considered reasonable as it falls within the standard margin
7 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
8 O’Connor) Hrg. Tr. 201:7-204:8; 3/11/2020 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because
9 Mr. Macaulay’s micro-special benefit percentages fall far below that 5% margin, “there is
10 no way of authenticating” such incremental changes because “[m]arket forces completely
11 obliterate any tiny little noise factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
12 160:23-161:5. Mr. Macaulay agreed during his deposition that 0.25% is too small to
13 measure. Macaulay Depo. at 25:17-25. Yet, Mr. Macaulay assigned or purported to measure
14 a difference in revenue and cap rates for Taxpayer’s property within that margin.
15 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
16 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
17 appraiser to discern the micro-value differences between hypothetical conditions that are so
18 similar (the WSDOT improvements compared to the LID improvements) “verges on being
19 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.

20 36. Even if it were possible to accurately tease out such a miniscule hypothetical
21 value change due to improvements coming five years later, experts testified that there is no
22 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
23 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at
24 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at

1 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
2 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
3 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.
4
5

6 37. No analysis of value increase attributable to individual components of the
7 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
8 percentage difference between hypothetical Before and After conditions. Throughout his
9 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
10 descriptions in the Addenda even though he testified that he relied on these to calculate
11 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
12 someone might be able to determine how he attributed value to After conditions described in
13 the Addenda, he answered that that was “not the scope of the assignment” because he was
14 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
15 that the six components were not actually a continuous project, that he was viewing them
16 together because the City asked him to, and that if he were to view them independently,
17 there was a low probability that properties in the north would specially benefit from
18 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.
19
20
21
22
23
24
25
26
27
28
29
30
31

32 38. Not only did he fail to analyze benefits from each of these non-contiguous
33 improvements, his familiarity with descriptions as whole was tenuous at best. See, e.g.,
34 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
35 arose from specific Before/After descriptions in the Addenda); cf. *Anderson v. City of*
36 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
37 objectives that guided regulators’ assessment of architectural plans for buildings along a
38 “signature street” were so vague that they amounted to ad hoc review based on the
39
40
41
42
43
44
45
46
47

1 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
2 even though he used the renderings as "visual aid[s] in appraising the property in the before
3 and after" to "visually see what the differences would be," he could not explain what
4 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
5 when shown a rendering of a two-lane road going down to one-lane in the After condition
6 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
7 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
8 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
9 could explain the depiction of the same trees in the After condition nearly twice as tall as in
10 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
11 of the Examiner's Recommendation: II.27 and IV.B.4.
12
13
14
15
16
17
18
19
20
21

22 39. Special assessment is not supported by comparable studies, data or reports.
23 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
24 that the LID Improvements will lead to meaningfully increased real estate values for
25 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
26 comparable sales or information from the "over twenty-five studies and reports" to arrive at
27 very precise special benefit increases for the commercial properties, including Taxpayer's
28 property. For example, although Mr. Macaulay stated that no single report or study was
29 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
30
31
32
33
34
35
36
37
38
39

40
41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
2
3 parcel-by-parcel analysis other than to say that the studies generally provided “some
4
5 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
6
7 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
8
9 similarities and differences between these improvements and the comparable parks he
10
11 looked at).

12
13 40. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
14
15 assignment of incremental increase of 0.5% to 4% to property values within the LID.
16
17 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
18
19 research misinterprets his work in critical ways, including because the LID Improvements
20
21 manifest the characteristics of a parkway (not a park), and his research indicates that most of
22
23 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
24
25 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
26
27 related value increases are in fact smaller; that estimated increases are “best guesses” rather
28
29 than predictions of property value increases in a particular city; and that percentages do not
30
31 account for diminishing returns after taking into account water views, which would be the
32
33 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
34
35 topography grants most properties in downtown a water view.

36
37 41. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
38
39 that this was just one source of information that was not entirely relevant because, among
40
41 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
42
43 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
44
45 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
46
47 180:2 (explaining that for purposes of “drawing boundaries around a park” he was

1 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
2 Crompton concluded that 500 feet via road from “park” improvements is just one or two
3 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
4 significantly beyond that which the park study indicated (even if it was legitimate to use the
5 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
6 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
7 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
8 Taxpayer’s property is not within 500 road network feet from the “park” improvements. *See*
9 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.

10
11 42. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
12 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
13 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
14 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
15 materials, it was clearly an important—if not *the* most important—source of information for
16 estimating special benefits (especially with respect to the condos).⁷ No City witness
17 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
18 parcel-by-parcel analysis.

19
20 43. The destination parks discussed in the Final Special Benefit Study do not
21 provide reliable, comparable, and valid support for the calculation of special assessments
22 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s

40
41

42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 critique of every case study cited concludes the changes to those “dwarf the difference
2 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
3 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
4 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
5 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
6 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
7 funded by a LID. And in virtually all of those cases, the park improvements dramatically
8 restored unimproved or blighted areas, and properties evaluated were within two or three
9 blocks of the park.

10
11 44. ABS’s claimed reliance on three economic studies to support property value
12 increase is also flawed. The HR&A study does not inform what value increases are
13 expected from the LID Improvements because it projects increases to tourism from *all* of the
14 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
15 dissimilar parks in other cities,⁸ making the methodological application to the LID
16 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
17 conclusion that there would be *no new net visitors* from downtown residents as a result of
18 the LID Improvements and could not explain how this impacted his condo analysis.

19
20 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
21 Property Values” primarily focused on whether the benefits accrue to the larger community
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40
41 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
42 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
43 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
44 expected tourists visiting the LID park was calculated using data from only from New York City, a
45 notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to
46 increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to
47 how hotel visitors actually select hotels to stay in.

1 rather than properties adjacent to the park. And the 2014 New York City Department of
2 Transportation study is not based on real estate transactions and market sales and fails to
3 substantiate any link between increased retail sales and property values. Moreover, this
4 study only looked at impact either directly abutting the streetscape improvement, or a couple
5 hundred feet for plaza-like improvements.
6
7
8
9

10 45. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
11 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
12 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
13 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
14 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
15 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
16 asked whether he considered that HR&A's estimated LID impact is six times greater than
17 TPL's assessment of Seattle's entire park system, his surmised that it was because the
18 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
19 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
20 assumptions to account for this difference, which may be partly explained by the fact that
21 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
22 approximately 3.44% of King County tourists visit Seattle primarily because of the city
23 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
24 waterfront improvements.
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 46. Although proximity to the improvements is a key factor in all of these
41 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
42 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
43 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
44
45
46
47

1 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
2 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
3
4 Improvements is approximate 20 acres and it is not a community park.⁹
5

6
7 47. There is no explanation in the Final Study or the supporting materials of how
8 the studies or comparable sales were used to derive values for Taxpayer's property. For
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
12
13

14
15 48. Failure to comply with USPAP. Taxpayer's assessment also rests on a
16 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
17 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
18 recognized) for developing the MAI standards for mass appraisals, testified that the Final
19 Study does not meet mass appraisal standards nor allow for independent assessment of the
20 accuracy of Mr. Macauley's conclusions.
21
22

23
24 49. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
25 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
26 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
27 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
28 testimony suggests that he incorrectly believed that the only difference between direct
29 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
30 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
31 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
32
33
34
35
36
37
38
39
40
41
42

43
44 ⁹ *See*
45 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
2 Gordon uses in doing his limited restricted report”).
3

4
5 50. But the difference is not only in reporting—mass appraisal techniques must
6 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
7 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
8 parcel approach:
9
10
11

12 The mass appraisal technique is an appraisal method used to evaluate
13 a group of properties that are subject to similar market forces as of a
14 certain date through the use of market data, statistical analysis and
15 testing. As a result, the mass appraisal technique does not require or
16 involve analysis of each individual property’s specific data.
17
18

19 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
20
21

22 51. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
23 universe of properties as a given date using standard methodology, employing common data,
24 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
25 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
26 model” is “a mathematical expression of how supply and demand factors interact in a
27 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
28 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
29 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
30
31
32
33
34
35
36
37

38 52. Regardless of client direction, Mr. Macaulay is required to comply with
39 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
40 economically feasible because it would have taken “an incredible amount of time and cost”
41 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
42
43
44
45
46
47

1 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
2 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
3

4
5 53. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
6 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
7 value, fails to calibrate the model structure to determine the contribution of the individual
8 characteristics affecting value, and does not review the mass appraisal results against actual
9 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
10 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
11
12

13
14
15
16 54. Mr. Macaulay explained that factors like “aesthetic change in the area, the
17 proximity to the elements, the increase in market rent, market vacancy changes,
18 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
19 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
20 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
21 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
22 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
23 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
24
25
26
27
28
29
30
31
32
33

34 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
35 relationship between characteristics that affect value, and to calibrate that model to specify how
36 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
37 21). The purpose is to rationally determine what characteristics will create value, and by how much.
38 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
39 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
40 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
41 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
42 include explanation of the model specification, data requirements, calibration methods, and
43 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
44 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
45 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
46 Hrg. Tr. at 206:15-207:17.
47

1 values were hypothetical, it was not possible to identify matched pair sales and no City
2 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
3 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
4 requires him to explain his model structure.
5
6
7

8
9 55. For these reasons, Taxpayer appeals the following portions of the Examiner’s
10 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
11 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
12 and appeals the Examiner’s denial of that motion.
13
14
15

16
17 56. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
21 property is not even within 500 road network feet from the core park improvements. And,
22 as described above, the special assessment is overstated because the Final Study makes no
23 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
24 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
25 improvements were not in in place—and, in fact, much of the waterfront is a construction
26 zone following removal of the viaduct and now Pier 58 demolition. Under these
27 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
28 Mr. Macaulay at the very least should have discounted the special benefit estimates or
29 waited to perform the Study until the improvements were at least close to complete.
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

Erroneous Pre-Improvement Valuation

57. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's property.

58. The City's Final Study was used to compute the proposed final assessment of SHG GARAGE SPE'S property. The City's Study purportedly uses data from the King County Department of Assessments, but the pre-improvement valuation information in the Final Study does not accurately reflect this data. For example, the City's Study values SHG GARAGE SPE'S property at \$11,280,000 as of October 1, 2019. However, the King County assessor determined the true and fair value of the property to be \$9,380,000, valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's valuation is 120% of King County's assessed value. The Final Special Benefit Study does not explain this difference—or any differences—between its pre-improvement valuation and its supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's Recommendation.

59. Thus, aside from multiple other reasons why computation of the special benefits was flawed (discussed further below), the assessment is based incorrectly on pre-improvement values that do not accurately reflect market data. For these reason, Taxpayer appeals the following portions of the Examiner's Recommendation: Section III. at p. 106.

Erroneous Computation of Special Benefit

60. "Special benefit" is "the increase in fair market value attributable to the local improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property may receive by reason of the improvement is not measured alone by the physical character or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*

1 of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
2 the particular tract or property benefited by the entire improvement, and is it assessed
3 proportionately with the other property included within the assessment district?” *Id.* 165–
4
5 66.
6
7

8
9 61. The proposed final assessment erroneously overstates the special benefit of
10 LID improvements in a number of ways.
11

12 62. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
13 the Four Seasons Garage, Mr. Macaulay assumed parking rates would increase by 2.5%
14 (low) and 3.5% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is
15 not possible to accurately conclude that the reason for this level of percentage increase
16 would be due to the LID Improvements, and there appears to be no support for assignment
17 of these percentages. He then uses this hypothesized increased revenue to calculate a new
18 net operating income for the commercial properties and capitalizes that to come up with an
19 “After” valuation.
20
21

22 63. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
23 operating income remains the same as in the hypothetical “Before” condition, but changes
24 the cap rate. For the Four Seasons Garage, the cap rate goes from 6.0% to 5.80% (low
25 scenario, creating a bigger value increase) and 5.85% (high scenario, creating a lower value
26 increase). Mr. Gordon likewise explained that cap rate changes of .2% or .15% are not
27 typically measurable, and there appears to be no support for these changes in the Final Study
28 or any of its supporting materials.
29
30

31 64. Mr. Macaulay then averages his four “After” values to arrive at a final special
32 benefit conclusion. For the garage, this is an increase in property value of 3.00% due to the
33 LID Improvements.
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 65. Mr. Macaulay offered little justification for his micro adjustments to revenue
2 and capitalization rates. When asked precisely what the basis is for his special benefit
3 percentage increases to revenue for each commercial property, he could not point to
4 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
5 is nothing in the report to allow a reader to understand how he came up with these
6 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
7 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
8 the basis for his belief that certain factors—liked increased connectivity—will increase
9 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
10 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
11 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
12 sources equally even though there was no separate analysis done for food and beverage or
13 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
14 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
15 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
16 properties.

17 66. When asked the basis for making such adjustments, Mr. Macaulay pointed to
18 “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7 (“Mr. Lukens helped
19 significantly in that regard in helping, you know, look at probable adjustments”). However,
20 Mr. Lukens testified that he did not review the percentage increases. *See* 6/25/2020 Hrg. Tr.
21 at 170:24-172:20.¹¹ And he did not review any work or data to determine whether the

22 ¹¹ As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different
23 special benefit and capitalization rate increases to the parking and retail parcels associated with the
24 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
25 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special

1 revenue percentage adjustments in the spreadsheets were reasonable, nor did he ever find
2 them to be unreasonable or suggest any changes. *Id.* at 172:3-20. Instead, he appeared to be
3 considering them for the first time on cross examination, testifying that the adjustments
4 “appear to be a kind of sensitivity analysis” and “appear to be a very minor change.” *Id.* at
5 170:18-172:13. Likewise, he had no understanding of what factors went into determining
6 the change in capitalization rates in the spreadsheets. *Id.* at 173:23-174:1. And he did not
7 know how ABS Valuation reconciled the four scenarios to come to final estimated special
8 benefit. *Id.* at 174:22-175:4.

16 67. Mr. Macaulay testified that he used comparable sales as a reasonableness
17 check for commercial properties. But as explained above, no City witness has explained
18 how anyone, or all, of the sales are comparable to any particular commercial property within
19 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
20 in order to make sales “comparable,” he would have had to make adjustments to account for
21 Before and After conditions, but there is no way to understand how adjustments were made
22 because he “didn’t do a separate sales comparison approach where we showed adjustments
23 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
24 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
25 *Id.* at 127:10-128:24.

36 68. It also bears noting that any “internal review” of the special benefit estimates
37 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
38
39

40
41
42
43 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
44 parcels). When asked whether this was a matter of coincidence, his answer was that is “just our
45 estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
46 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
47 though it is one block closer to the waterfront.

1 error. Indeed, given all the same information, he seemed to suggest that it would be
2 perfectly reasonable for another experienced appraiser to come up with special benefit
3 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
4 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
5 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
6 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
7 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
8 margin of error (5%) is a "rule of thumb" and not a "hard legal standard," there are still
9 reasonable and unreasonable variations within the appraisal field. *See Examiner's*
10 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
11 special because it is arbitrarily assigned; and it is too small to realistically be supported by
12 appraisal techniques.

13
14
15
16
17
18
19
20
21
22
23
24
25 69. No evidence of special benefit. Meanwhile, there is "no actual evidence from
26 any seller or purchaser that the price was higher because of the LID improvements."
27 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser "has not
28 identified any seller or buyer, or any particular property where the existence of the LID
29 improvements had an effect on the market price." *Id.* at 410-11. Meanwhile, Taxpayer has
30 explained that the property has not increased rental rates or revenue due to the forthcoming
31 LID Improvements, because, among other reasons (and apart from COVID), the
32 improvements ABS believes will generate value do not exist, and will not for a number of
33 years to come. There are no comparable sales because the LID Improvements are not in
34 place, nor will they be until the end of 2024 if completed on schedule.

35
36
37
38
39
40
41
42
43
44
45 70. The fair market value of SHG GARAGE SPE's property has not changed due
46 to increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not
47

1 specially benefited from installation of new water main and fire hydrant where it was
2 already adequately supplied with water and afforded adequate fire protection). And in any
3 event, any value attributable to removal of the viaduct was to be excluded from the
4 assessment calculation.
5
6

7
8 71. There is no special benefit because LID improvements in fact diminish the
9 value of SHG GARAGE SPE's property by requiring increased staffing and monitoring
10 costs. *See Kusky*, 85 Wn. App. 493 (testimony of owners' expert that LID actually
11 diminished value of property was sufficient to rebut presumption that assessment was
12 proper).
13
14

15 72. Moreover, the assessment formula is an attempt to distribute costs that do not
16 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
17 "merely a mathematical model that distributes costs").
18
19

20 73. The Special Benefit Study fails to address whether the \$346,000,000
21 estimated LID project cost takes into account the investment that would have occurred in the
22 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
23 invested. This is a critical component of estimating which properties receive a direct benefit
24 from the improvements, versus more incidental benefits further from the park.
25
26

27 74. The proposed final assessment substantially exceeds the special benefit to the
28 property and is grossly disproportionate to similarly situated properties within the LID. For
29 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
30 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).
31
32

33 **State Environmental Policy Act and Other Environmental Permitting**

34 75. While this appeal is not challenging the City's environmental review and
35 permitting processes, those processes are relevant in determining the legality of the
36
37
38
39
40
41
42
43
44
45
46
47

1 assessments, and to assessing the delivery risk, the present value of the City's plans, and
2 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
3 pursue projects that have not yet undergone environmental review (thus limiting the choice
4 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
5 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
6 is just beginning. Further, the City has segmented environmental review, and still has a
7 gauntlet of federal, state and tribal review processes to complete before it will be clear what
8 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
9 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
10 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
11 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
12 committing to reconstruction of Pier 58 and major street improvements without
13 environmental review, or the City's Final Special Study has improperly included and is
14 proposing to assess the Taxpayer the costs and special benefits of improvements that may
15 not get built. Either way, it is faulty process.

30 **Due Process Rights**

31
32 76. The City's failed to notify SHG GARAGE SPE sufficiently in advance of the
33 hearing to allow SHG GARAGE SPE to obtain evidence and prepare to properly challenge
34 the assessments. Because LID assessments involve a deprivation of property, affected
35 owners have the right to a hearing as to whether the improvement resulted (or will result) in
36 special benefits to their properties and whether their assessments are proportionate, which
37 necessarily includes the right to adequate notice of the hearing. *Carlisle v. Columbia*
38 *Irrigation Dist.*, 168 Wn.2d 555, 569-70, 229 P.3d 761 (2010).
39
40
41
42
43
44
45
46
47

1 77. The LID statute specifies that cities must mail notices giving the time and
2 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
3 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
4 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
5 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
6 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
7 secure their own appraisal), evaluate proportionality of the proposed assessments, and
8 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
9 for anybody to get an appraisal”).

10 78. The City’s Notice of Assessment was sent on December 30, 2019. And the
11 Final Special Benefit Study has only been available for public review since January 7, 2020.
12 Due to this short time frame, SHG GARAGE SPE requested a prehearing conference and
13 scheduling order that would preserve and protect SHG GARAGE SPE’s right to analyze and
14 respond to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
15 accommodate preliminary motions (e.g., with respect to the interplay between SEPA and the
16 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
17 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
18 the Examiner’s Recommendation: I.B.

19
20
21
22
23
24
25
26
27

29
30
31
32
33
34
35
36
37 **VII. Relief Requested**

38 SHG GARAGE SPE respectfully requests that the City Council:

- 39
40
41 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
42 and
43
44 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
45 assessment dated December 30, 2019; or
46
47

- 1 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
2 proposed final assessment to \$0 (zero), or such amount as Taxpayer
3 establishes at the hearing in this matter; or
4
5
6
7 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
8 and reduce Taxpayer's assessment using recognized appraisal techniques
9 consistent with USPAP and:
10
11 i. Excluding any property value increase attributable to viaduct removal
12 and other planned WSDOT Improvements;
13
14 ii. Taking into account the effects of the COVID-19 pandemic on the
15 value of Taxpayer's property and other relevant developments since
16 October 2019;
17
18 iii. Accounting for and excluding (1) any special benefits from existing
19 or planned improvements that already provide similar benefits to
20 Taxpayer's property, and (2) any special detriments from construction
21 and other anticipated LID-related disamenities;
22
23 iv. Accounting for and including only those actual benefits anticipated to
24 accrue to Taxpayer's property based on its location relative to Pier 58,
25 Overlook Walk, and the Promenade, and specific elements of the LID
26 Improvements;
27
28 v. Discounting anticipated special benefits to present value, based on
29 reliable estimates regarding when special benefits will start accruing
30 following completion of the LID Improvements; and
31
32 vi. Accounting for such other issues specific to Taxpayer's property
33 relevant to calculation of such assessment; and
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2. Grant such further relief as the City Council deems just and proper.

22 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

23 SHG GARAGE SPE ("Taxpayer") owns the property that is subject to the proposed
24 final assessment described in Section IV.
25
26

27 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
28 include additional arguments relevant to the revised Final Recommendations of the Hearing
29 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
30 objection to the assessment, which was based on the Final Study. Taxpayer further timely
31 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
32 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
33 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
34 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
35 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
36
37
38
39
40
41
42
43
44
45
46
47

1 as authorized by the Hearing Examiner, including without limitation all records pertaining to
2 the November 2020 through February 2021 remand hearing ordered by Council.
3

4
5 **IV. Amended Arguments on Appeal**

6 SHG GARAGE SPE supplements its appeal of the Hearing Examiner's
7 recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local
8 Improvement District No. 6751 proposed final assessment dated December 30, 2019 against
9 the following property:
10
11

12 King County Parcel No. 6094670010
13 Site Address: 1321 1st Ave, Seattle, Washington
14 Proposed Final LID Assessment for Parcel: \$132,435.84
15

16 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
17 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
18 amended appeal.
19
20

21 **A. The Anticipated Special Benefits to Taxpayer's Property should be**
22 **Discounted to Present Value and Assessments Adjusted as Appropriate**
23

24 On remand, the City's appraiser acknowledged that special benefits to parcels can be
25 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
26 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
27 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
28 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
29 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
30 accepted that recommendation. The City's appraiser further acknowledged that benefit
31 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
32 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
33 (benefits to theatre "would be a long enough time out to where it wouldn't measurably affect
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
2
3 calculations to present value because the general benefits are not anticipated from the LID
4
5 improvements until they are completed in 2024, 5 years after his 2019 assessment, and
6
7 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
8
9 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
10
11 benefit calculation, and related assessments, to account for the delay between the assessment
12
13 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
14
15 standard appraisal practice, and renders the other proposed Waterfront LID special
16
17 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
18
19 “fundamentally wrong methods.”

20
21 All special benefit taxes assessed by a municipality must be based on “actual,
22
23 physical and material [special benefits that are] not merely speculative or conjectural.”
24
25 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
26
27 Additionally, the assessments may not materially exceed the actual special benefit conferred
28
29 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
30
31 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
32
33 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
34
35 discount benefits the City estimated would accrue to the properties from improvements to be
36
37 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
38
39 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
40
41 property while treating all or most others (including Taxpayer’s) differently, and
42
43 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
44
45 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
46
47 for some properties because the benefits are too distant, while assessing other properties as

1 though distant benefits have already been secured. As Taxpayer identified in its September
2 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
3 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
4 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
5 reject the improper calculation of the benefit or remand and require the appraiser to discount
6 the benefits to net present value.
7
8
9

11

12
13 **B. In Light of Covid's Continuing Impact on Taxpayer and other**
14 **Downtown Property Owners and other Material Changes Since October**
15 **2019, the LID Should be Cancelled, or at Least Assessments**
16 **Recalculated, to take Into Account Property Value Reductions**
17

18 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
19 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
20 other relevant developments since October 2019." When Washington's first COVID
21 restrictions were imposed in March and April 2020, there was an assumption that they
22 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
23 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
24 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
25 gotten much worse. The City has already imposed higher minimum wages and taxes on
26 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
27 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
28 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
29 years from completion, as a best case. In current circumstances, a downtown tax to fund
30 new, non-essential park improvements against financially strapped taxpayers, and likely
31 passed through to financially strapped tenants and customers would be unfair to taxpayers
32 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 rethinks its budget priorities for the next few years, and its potentially funding sources,
2
3 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
4
5 property owners) have a chance to recover, and that any assessment take into account the
6
7 changed circumstances since this appeal process started on February 4, 2020 to avoid
8
9 unnecessarily and perhaps permanently killing downtown properties and businesses in the
10
11 name of bettering them.

12
13 **V. Relief Requested**

14
15 Particularly in light of the Committee's decision not to take further comment from
16
17 appellants, Taxpayer respectfully request that each Committee member carefully review the
18
19 full record transmitted to Council before voting on Taxpayer's appeal.

20
21 SHG GARAGE SPE respectfully reiterates its request from the September 22, 2020
22
23 appeal that the City Council:

- 24
25 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection;
26
27 and
28
29 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
30
31 assessment dated December 30, 2019; or
32
33 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
34
35 proposed final assessment to \$0 (zero), or such amount as Taxpayer
36
37 establishes at the hearing in this matter; or
38
39 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
40
41 and reduce Taxpayer's assessment using recognized appraisal techniques
42
43 consistent with USPAP and:
44
45 i. Excluding any property value increase attributable to viaduct removal
46
47 and other planned WSDOT Improvements;

- 1 ii. Taking into account the effects of the COVID-19 pandemic on the
2 value of Taxpayer's property and other relevant developments since
3 October 2019;
4
5 iii. Accounting for and excluding (1) any special benefits from existing
6 or planned improvements that already provide similar benefits to
7 Taxpayer's property, and (2) any special detriments from construction
8 and other anticipated LID-related disamenities;
9
10 iv. Accounting for and including only those actual benefits anticipated to
11 accrue to Taxpayer's property based on its location relative to Pier 58,
12 Overlook Walk, and the Promenade, and specific elements of the LID
13 Improvements;
14
15 v. Discounting anticipated special benefits to present value, based on
16 reliable estimates regarding when special benefits will start accruing
17 following completion of the LID Improvements; and
18
19 vi. Accounting for such other issues specific to Taxpayer's property
20 relevant to calculation of such assessment; and
21
22 2. Grant such further relief as the City Council deems just and proper.

Hearing Examiner File No. CWF-0433

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON SHG RETAIL
SPE’S OBJECTION TO WATERFRONT
LID NO. 6751 PROPOSED FINAL
ASSESSMENT FOR PARCEL NO.
6094670020

33
34 SHG RETAIL SPE files this appeal pursuant to RCW 35.44.070, Seattle Municipal
35 Code 20.04.090, City of Seattle Resolution 31915, the notice of the Seattle Office of the
36 City Clerk dated December 30, 2019, and the Hearing Examiner’s Findings and
37 Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).

27 **III. Statement of Taxpayer's Interest**

28 SHG RETAIL SPE LLC owns the property that is subject to the proposed final
29 assessment described in Section IV. The property is a small retail space, part of the Four
30 Seasons Hotel. The basis of the proposed assessment is a Final Special
31 Benefit/Proportionate Assessment Study for Waterfront Seattle Local Improvement District
32 ("Final Study"), dated October 1, 2019 and prepared by Robert Macaulay with ABS
33 Valuation (the City's appraiser). The Final Study proposes assessments that are purportedly
34 limited to paying for the LID-funded components—namely, the Promenade, Overlook Walk,
35 Pioneer Square Street Improvements, Union Street Pedestrian Connection, Pike/Pine
36 Streetscape Improvements, and Pier 58 (together, the "LID Improvements"). The Final
37
38
39
40
41
42
43
44
45
46
47

1 Study purports to exclude charges for other improvement projects in the Central Waterfront,
2 and specifically those WSDOT had already agreed to pay for and construct: viaduct
3
4 demolition, the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State
5
6 Route 99 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces
7
8 WSDOT planned fronting piers between Pike and Madison (together, the “WSDOT
9
10 Improvements”). But because construction was not complete on the LID Improvements or
11
12 the WSDOT Improvements at the time the Final Study was prepared, Mr. Macaulay’s
13
14 October 1, 2019 “Before” and “After” valuations are both based on hypothetical conditions
15
16 rather than actual facts. On February 4, 2020, Taxpayer timely filed an objection to the
17
18 assessment, which was based on the Final Study.
19

20 21 **IV. Matter Under Appeal**

22 SHG RETAIL SPE LLC appeals the Hearing Examiner’s recommendation to deny
23
24 Taxpayer’s objection to the City of Seattle’s Waterfront Local Improvement District No.
25
26 6751 proposed final assessment dated December 30, 2019 against the following property:
27

28
29 King County Parcel No. 6094670020
30 Site Address: 1321 1st Ave, Seattle, Washington
31 Proposed Final LID Assessment for Parcel: \$31,345.76
32

33 See Examiner’s Recommendation at 61-620, 106. To avoid repetition, Taxpayer
34
35 incorporates the evidence and arguments raised before the Hearing Examiner into this
36
37 appeal. In particular, Taxpayer points the City Council to Taxpayer’s initial Appeal
38
39 Petition, *Frye* motion, Closing Brief submitted at the close of its case-in-chief (dated
40
41 4/16/2020), and supplemental Closing Statement submitted at the close of the City’s case-in-
42
43 chief (dated 7/7/2020).¹
44

45
46 ¹ Because the City has not provided “metered index numbers,” our appeals cannot reference
47 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the

1 As discussed more fully below, Taxpayer specifically appeals the following Findings
2 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
3
4 Pages 61-62, 106, Sections II.6, II.7, II.12, II.13, II.14, II.17, II.18, II.19, II.20, II.21, II.22,
5
6 II.23, II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2,
7
8 IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i),
9
10 IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5,
11
12 IV.C.8, IV.C.11, IV.C.12, IV.C.14, IV.C.18
13

14 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
15
16 recommendations on material issues raised during Taxpayer's appeal that were supported by
17
18 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
19
20 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
21
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23
24 recommended anything other than denial of objectors' appeals were where the City's
25
26 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
27
28 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
29
30 special assessments based on "fundamentally wrong methods."
31

32 The special benefit for which special taxes are assessed must be "actual, physical and
33
34 material and not merely speculative or conjectural." *Heavens v. King Cty. Rural Library*
35
36 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
37
38 with the law, the assessments may not materially exceed the actual special benefit conferred
39
40

41
42 _____
43 Public Works committee secure and provide appellants with such a record, so that the appeals can
44 then be supplemented with that additional information, so as to make the Committee's consideration
45 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
46 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
47 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
retained by Perkins Coie are part of this case file.

1 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
2 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
3 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
4 assessment. In this case, the proposed assessment fails each of the legal requirements for
5 special assessments and must be annulled as arbitrary or capricious, or founded on
6 fundamentally wrong methods.
7
8
9
10
11
12
13

14 **Legal Requirement:** Actual, non-speculative special benefit

15
16 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
17 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
18 October 2019 (they were not), and an “After” value purporting to assess the value of
19 properties with the LID improvements in place at least five years before anticipated
20 completion.
21
22

23 **Legal Requirement:** Cannot materially exceed the special benefit

24
25 **ABS Study:** ABS calculates a special benefit of \$80,000 assuming the LID Improvements
26 were in place and providing benefit in October 2019. However, the LID Improvements
27 will not be completed until the end of 2024 if the City meets its current schedule, and
28 many of WSDOT’s alternative improvements will not be built. The present value of future
29 improvements deliverable in five years is significantly lower than the current value of
30 improvements that already exist. Further, ABS’s own materials show that benefits may not
31 accrue for at least five years after they are completed, in 2029. If the hypothesized special
32 benefits are discounted to present value, the assessments materially exceed the
33 hypothesized special benefits.
34
35
36

37 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID

38
39 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
40 prepared his Final Study in October 2019, and the City issued its preliminary roll in
41 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
42 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
43 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
44 and must be based on actual special benefits. While that does not mean ABS’s appraisal
45
46
47

was wrong when completed, values and benefits need to be reanalyzed before assessments are finalized in light of the unprecedented changes to the downtown real property market.

Legal Requirement: Actual benefit that cannot materially exceed special benefit—Assessment cannot include value attributable to future WSDOT Improvements.

ABS Study: The City’s appraiser asserts that the City is not collecting assessments “based on the value of WSDOT’s planned improvements.” *See* Final Study at 3. However, the City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition, the City’s appraiser increased 2019 property market values as though WSDOT had completed its work by 2019. The proposed assessment is against this hypothetical WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent) higher than actual 2019 market values. The City is collecting an assessment against both the 2019 current values and the phantom 2019 WSDOT market value lift, in direct contravention of law and the City’s promise not to impose an assessment based on the value of viaduct demolition and the other components of WSDOT’s planned work.

Legal Requirement: Benefits must be special, not general

ABS Study: The City’s appraiser fails to determine or explain what general benefits arise due to the LID Improvements. However, the far-reaching and public nature of the improvements make any benefit arising from them general—not special.

Legal Requirement: Benefits must be “physical and material and not merely speculative or conjectural . . .”

ABS Study: Not only are the improvements not yet “physical or material,” but environmental review and permitting for the City’s proposed LID Improvements is not complete, and the LID improvements are not anticipated to be complete until the end of 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in a manner consistent the City’s then-current proposals, which were in many respects merely conceptual designs.

Legal Requirement: Must comply with appraisal standards

ABS Study: ABS’s valuation methodology cannot be tested. It is a hybrid of “Individual” and “Mass” appraisal techniques, but fails to meet USPAP requirements for either. Until the Examiner admonished ABS, ABS even asserted its analysis was “confidential and proprietary.” ABS’s analysis and conclusions can neither be tested nor replicated. The Final Study fails to meet basic standards for admissibility and must be remanded.

Legal Requirement: Actual and measurable special benefit

ABS Study: ABS's proposed assessments are assigned rather than measured, as demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based on a host of "micro-judgments" that are not supported by any documentation, nor capable of replication or quality assurance/quality control. The assessments are undocumented, unreliable, and not supported by empirical studies, data, or reports.

Legal Requirement: Actual and measurable special benefit—Park benefits must be supported by empirical evidence

ABS Study: Dr. John Crompton, the world's preeminent expert regarding the economic value of parks and other public amenities and on whom ABS purported to rely, testified that ABS had completely misapplied his work and dramatically overstated both the distance to which economic benefits might extend from the LID Improvements and the extent of any anticipated benefit within the potentially benefited area.

Legal Requirement: Actual special benefit—Must take into account potential disamenities

ABS Study: The appraiser ignores the negative value impact of five years or more of construction, as well as other potential disamenities associated with public places.

Legal Requirement: Cannot prematurely commit to build

ABS Study: The City has not completed NEPA review or other entitlement process for its Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments are being imposed. But finalizing the roll is a commitment by the City to build the improvements, which is a violation of legal process and commits the City to build things it may not secure permission to build.

In addition to these general objections, there are property-specific issues raised by Taxpayer as to which the Examiner also erred, discussed in the course of the appeal statement below.

1 **V. Standard of Review**

2 “When considering the assessment roll, the city council sits ‘as a board of
3 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
4 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
5 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
6 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
7
8
9
10
11

12 The proposed assessments are presumed correct, “unless overcome by clear, cogent
13 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
14 than the heightened presumption of correctness on judicial appeal because “applying these
15 elevated standards at the municipal hearing would afford unwarranted deference to a report
16 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
17 presumption is not evidence and its efficacy is lost when the other party adduces credible
18 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
19 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
20 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
21 presented credible evidence showing that the City’s proposed assessment is arbitrary,
22 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
23 to the City to prove the assessments are actual, measurable, special, non-speculative and
24 proportionate. The City failed that burden.
25
26
27
28
29
30
31
32
33
34
35
36
37

38 **VI. Grounds for Appeal**

39 SHG RETAIL SPE appeals the Hearing Examiner’s Findings and Recommendations
40 on the following grounds.
41
42
43
44
45
46
47

Taxpayer Not Required to Provide A Special Benefit Study

1
2
3 1. Contrary to the Examiner’s findings and recommendations, there is no
4 requirement that experts or property owners provide an alternative special benefit
5 calculation under these circumstances—to do so would also require the same improper
6 speculation the City’s expert engaged in, given the timing and information provided. *See*,
7
8 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
9 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of Brian O’Connor
10 ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: “[W]e have
11 explicitly rejected an argument that, because certain protestors ‘failed to offer expert
12 testimony at the city council hearing[,] the presumptions [in favor of the assessment] were
13 still operative as to their property.’” *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail*
14 *Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*, 85 Wn. App. 493,
15 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he provided expert
16 opinion showing that improvements actually diminished value of the property). In fact, no
17 independent evidence is required at all if, for example, objectors show that the assessment
18 was grounded on a fundamentally wrong basis due to an error in the City’s appraiser’s
19 methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of*
20 *Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example, a property owner
21 could simply point out that the square footage assumed in the City’s appraisal was incorrect.
22 For these reasons, Taxpayer appeals the following portions of the Examiner’s
23 Recommendation: Sections II.12, II.13, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8, and
24 IV.C.11.
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

2 2. RCW 35.43.040 provides cities and towns authority for ordering local
3
4 improvements and for levying and collecting special assessments “on property specially
5 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed
6
7 upon all the property in accordance with the special benefits conferred thereon.” RCW
8
9 35.44.010.
10

11 3. No analysis of general benefits. Special assessments have been “held valid
12
13 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
14
15 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
16
17 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
18
19 they are for the construction of local improvements that are appurtenant to specific land and
20
21 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
22

23 4. SHG RETAIL SPE’s property is not specially benefited by the LID
24
25 Improvements. The primary purpose and effect of the LID Improvements are to benefit
26
27 “members of the whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain
28
29 that a public library is for the benefit of the members of the whole community individually
30
31 and collectively who may be served by it”). Mr. Macaulay’s own chapter of the LID
32
33 Manual states clearly that appraisers should “[c]onsider general benefits as well as special
34
35 benefits” (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits
36
37 probably accrue to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s
38
39
40
41

42
43

² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 expert confirmed that if an appraiser “identifies both general and special benefits, these
2 benefits should be clearly distinguished and explained, and only special benefits should be
3 included in the After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020);
4
5
6
7 see also 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at
8
9 158:13-159:8, 192:8-193:2; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-183:4. It is
10
11 undisputed that Mr. Macaulay did not analyze or measure general benefits, including those
12
13 arising from construction necessary to meet basic design standards. See Hrg. Exhibit 117
14
15 (LID Manual) at 58 (“[c]onsideration may also be given to those construction costs related
16
17 to meeting design standards which may be general benefits as distinct from construction
18
19 costs emanating from requirements of the LID project”). To the extent Taxpayer’s property
20
21 may benefit from the LID improvements, the benefit is general and incidental, and failure to
22
23 consider general benefits was a fatal flaw in the City’s methodology. For these reasons,
24
25 Taxpayer appeals the following portions of the Examiner’s Recommendation: Sections
26
27 IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

28
29 5. LID Improvements not necessary. Unlike typical LID projects, the
30
31 Waterfront LID improvements are largely unnecessary to the functionality of any particular
32
33 property, including Taxpayer’s property. See *In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
34
35 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
36
37 held invalid where owners would have benefitted equally from increase of only 9 feet);
38
39 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
40
41 intersection for new water main for hydrant held invalid because land was already afforded
42
43 functional hydrant at nearby street). Here, Taxpayer provided evidence that the LID
44
45 Improvements are not necessary to the business of their income-producing properties, all of
46
47 which already have sufficient access to the waterfront, downtown restaurants, and other

1 amenities necessary for their clients and users. This property has stair access to the
2 waterfront adjacent to the property, improved access for the rest of the city does not benefit
3 this property. The fact that there is no case law differentiating between binary
4 improvements and parks does not change the law prohibiting assessments on properties
5 already adequately served by existing amenities. *See* Examiner’s Recommendation at
6 IV.C.3 (reasoning that “no case law is provided to support the differentiation between a
7 hardscape benefit and the more ephemeral benefits of park”). Nor does the Examiner’s
8 reasoning excuse the City’s failure to account for existing amenities as part of the special
9 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
10 the incremental effect of new park improvements on the value of properties, much like
11 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
12 (Crompton’s Report) at 12-13.

13
14 6. To the extent benefits can be considered “special” as opposed to general, they
15 are nominal or nonexistent for many properties even in the Central Waterfront, which
16 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
17 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties’ fair market value did not
18 change due to expansion of sewer service *near* owners’ parcel which were already
19 connected). Here, the primary reason users choose this retail establishment is not proximity
20 to the waterfront. Instead, it is usually hotel users, which caters primarily to business
21 travelers attending conventions and meetings. *See* Hrg. Exhibit 106 (Palladino Decl.), ¶¶ 7-
22 13. Even if the City could assess for a view change (and it has promised not to assess for
23 viaduct removal), the fair market value of SHG RETAIL SPE’s property has not changed
24 because the LID Improvements have not improved the property’s waterfront view or access
25 to the waterfront, nor will they when the City anticipates completion in 2024. For these

1 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2
3 Sections IV.C.3, IV.B.9, and IV.C.3.

4
5 7. No analysis of special detriments. The Final Study fails to properly account
6
7 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
8
9 owners for removal and cleanup of underground storage tanks discovered during the
10
11 improvement project). Ms. Palladino testified that property values may in fact be negatively
12
13 impacted by the LID improvements due to the increased traffic, potential for crime,
14
15 homelessness, and sanitation issues. *See* Hrg. Exhibit 106 (Palladino Decl.), ¶¶ 7-13. Ms.
16
17 Palladino also testified that the assessment is an immediate expense that comes with no
18
19 immediate increase in revenue. *Id.* The expense of the yearly debt service could not
20
21 reasonably be passed on to customers. Although Mr. Macaulay claims he analyzed impacts
22
23 on the City's planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is
24
25 no explanation of how lost parking might be a detriment, and no property-specific parking
26
27 analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also*
28
29 6/26/2020 Hrg. Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking
30
31 on condos).

32
33 8. Likewise, there was no analysis of the risks associated with disamenities such
34
35 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
36
37 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
38
39 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
40
41 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
42
43 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
44
45
46
47

1 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
2 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
3 the maintenance agreement. *Id.* at 13:4-14:2.
4

5
6 9. There was also no consideration of negative impacts from another four-plus
7 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
8 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
9 law allowing him to dismiss these actual, non-speculative impacts. Because future special
10 benefits calculations are inherently speculative, Washington's eminent domain statute
11 specifically allows condemnees to postpone special benefits assessments until improvements
12 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
13 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
14 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
15 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
16 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
17 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
18 II.25, IV.B.8, and IV.B.9.
19
20
21
22
23
24
25
26
27
28
29
30
31

32 10. Special benefit estimate is speculative. When calculating a special benefit,
33 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
34 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
35 becomes pure speculation." *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335-36, 324
36 P.2d 1078 (1958)).
37
38
39
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 11. Assuming without conceding that one day, the City’s planned LID
2
3 Improvements might increase the value of neighboring properties to some extent, that
4
5 potential benefit is many years away and speculative. While appraisers tolerate some degree
6
7 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
8
9 far too speculative to satisfy industry practices and standards. *See e.g.*, 3/12/2020 (P.
10
11 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
12
13 the level of precision implied in the Final Study due to the size of the LID and use of
14
15 hypotheticals).

16 12. Although LIDs are sometimes finalized prior to completion of improvements,
17
18 this is typically just six month or a year prior, and the assessments are otherwise supported
19
20 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
21
22 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
23
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25
26 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
27
28 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
29
30 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
31
32 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
33
34 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
35
36 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
37
38 market value would be as of the date the project would be finally constructed” because
39
40 “[t]here could be a lot of elements in the market that did occur between now and then that
41
42 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
43
44 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
45
46 fluctuate over time” and “I can’t predict the future”).
47

1 13. The record is clear that while no one can know what “special benefit” might
2 accrue to these properties in four years (if any), we do know that there are no actual benefits
3 now. The LID improvements provide no immediate special benefit to property owners
4 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
5 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
6 sewer system for future users). For example, notwithstanding the questionable hypothesis
7 that retail establishments will benefit from an expected increase in tourism when the
8 improvements are complete, it is undisputed that tourists are not coming in larger numbers
9 and paying more now because of something happening five years down the road. *See*
10 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23; O’Connor Decl. ISO Closing Stmt., ¶ 7 (dated
11 7/7/2020) (no apartment leased today for 18 months would rent at a higher rate due to
12 improvements coming in 2024).

13 14. Further, there are no “plans and specifications” on file with the Clerk’s Office
14 for the LID Improvements, and it is unlawful to move to final assessments without such
15 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
16 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
17 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
18 dollars on projects still early in the design process. *See* Washington Attorney General
19 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
20 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
21 of programs and included “only so much of the overall costs” that took place within and
22 benefitted the assessed properties).

23 15. The COVID-19 crisis highlights how fundamentally speculative and unfair it
24 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
25

1 anticipated to be delivered five years later. Even before COVID, it was speculative to
2
3 assume that market highs experienced in October 2019¹ would be sustained through 2024,
4
5 after an already extraordinarily long expansion period. *See*, 3/3/2020 (A. Gibbons) Hrg. Tr.
6
7 at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my
8
9 analysis in October 2019, who would have thought that this COVID issue would happen?”
10
11 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was
12
13 that the market was going to continue to go up”—in fact, they are already irrelevant. *See*
14
15 Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although COVID does not
16
17 change actual values as of October 2019 (*see* Examiner’s Recommendation at 109), the
18
19 pandemic has impacted *current* values and rendered the hypothetical October 2019 Final
20
21 Study valuations outdated.

22
23 16. As another example of how future events could affect the accuracy and
24
25 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
26
27 Examiner re-open the record to allow the City to explain whether the assessments against
28
29 property owners within the LID are, in fact, being used by the City to fund the emergency
30
31 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
32
33
34
35

36
37 ⁴ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King

[ry=EvGV09Syk1HCKYhwoN5Gqo5VpGOk5QBr3KFzTsfO4Lw=](https://www.govonlinesaas.com/WA/WDFW/Public/EnSuite/Shared/pages/util/StreamDoc.ashx?query=EvGV09Syk1HCKYhwoN5Gqo5VpGOk5QBr3KFzTsfO4Lw=).

1 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10
11 17. There is also no certainty the improvements will be delivered on time. Mr.
12 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
13 delay in construction schedule would not constitute a “material change” under the City
14 Council’s ordinance authorizing the improvements. In other words, the City cannot
15 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
16 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
17 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
18 potential delays and project changes inherent in those processes, that call into question the
19 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
20 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
21 Decl., dated 4/15/2020).
22
23
24
25
26
27
28
29
30
31

32
33 18. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
34 he could not point to a single one where the assessment roll was finalized five years in
35 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
36 he has never recommended final special assessments based on designs less than 30 percent
37 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
38
39
40
41
42
43
44

45 ⁵ Asia Fields, ‘*Substantial*’ pier shift closes Seattle’s Waterfront Park (Seattle Times, Aug. 8,
46 2020), available at [https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/)
47 [waterfront-park/](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/).

1 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
2 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
3 at 66:17-25. He performed no independent due diligence to determine the reliability of the
4 City’s estimates for completion of the LID Improvements, or to ensure that proposed
5 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
6 agreed that if any of his assumptions are incorrect, his opinion of market value would need
7 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
8 68:11-18.

16 19. The City has cited no authority—and Taxpayer is aware of none—that
17 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
18 assess taxes for “actual” special benefits that will not accrue for another five years (if all
19 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
20 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
21 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
22 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
23 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
24 IV.C.14, and IV.C.18.

34 20. Failure to discount special benefit estimates to account for risks and present
35 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
36 have accounted for risks associated with delivery of the improvements (including permitting
37 risk, construction risk, general economic risk) and any special damages associated with
38 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
39 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
40 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*

1 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
2 the impact of future conditions [through] discounted cash flow analysis.”).
3

4
5 21. Mr. Macaulay acknowledged that appraisers can discount the value of a
6 future condition not in place at the date of valuation and can discount for the time value of
7 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
8 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
9 Discounting would also have been consistent with his approach for analyzing special
10 benefits to vacant land. He testified that the difference between similarly situated vacant
11 sites slated for development and already developed sites was that the labor, capital and risks
12 associated with development had not yet been borne for those vacant sites. Therefore, the
13 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
14 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
15 fully permitted, has not completed environmental review, and has not reached full design is
16 presently worth significantly less.
17
18

19
20 22. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
21 present value, an appraiser would consider discount rates for land development to account
22 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
23 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
24 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
25 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
26
27

28
29 23. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley’s
30 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
31 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
32 Ex. A. Notably, this is lower than the City’s proposed \$171,000,000 assessment. Thus,
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 ignoring momentarily all of the other methodological and other flaws discussed here and in
2 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
3 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
4 exceeds special benefits when reduced to present value. Further, to the extent the City is
5 arguing that because they are permitted to assess 100% of the special benefit, the special
6 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
7 is again wrong. After applying proper discounting, the City's proposed special benefit
8 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
9 100% of the total estimated special benefit.
10
11
12
13
14
15
16
17

18 24. But even the assumption that the LID improvements would deliver benefits
19 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
20 on. Rather, those studies demonstrate that a discount period of five years is conservative.
21
22 See Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
23 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
24 indicates that during the construction period, the Greenway district "significantly" lagged in
25 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
26 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
27 30-31 (discussing New York City High Line and San Francisco Embarcadero
28 improvements). Given the lengthy delay, any prediction of future special benefits is
29 speculative, especially during the construction phase where values are likely to decline.
30
31 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
32 Improvements take a similarly long period of time after they are complete to start producing
33 tangible property value benefits, each additional year of delay results in further discount to
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
2
3 A.

4
5 25. Applying the same discounting methods described above and in Mr. Gibbons
6
7 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
8
9 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
10
11 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
12
13 100% assessment should be no more than \$7,536. Anything more would permit the City to
14
15 assess Taxpayer based on a hypothetical assumption that these improvements are in place
16
17 and providing benefit, and ignore the risks, construction disamenity, and time value of
18
19 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
20
21 would counsel that the assessment should be only 39.2% of that assessment cap, or \$2,939.
22

23 26. Attachment C includes two Excel spreadsheets applying these discounting
24
25 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
26
27 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
28
29 demonstrates that discounting the City's hypothetical October 2019 special benefits to
30
31 present value would reduce Taxpayer's assessment to \$10,754, exclusive of any other flaws
32
33 in the City's proposed assessment. The second spreadsheet shows even more drastic
34
35 reductions after taking into account: (1) a rough discount for property value loss due to
36
37 COVID-19; and (2) discounting to present value for 5 years (*i.e.*, from 2024 when the City
38
39 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
40
41 the time it takes for the improvements to capture property value). After such reductions,
42
43 Taxpayer's assessment would be just \$9,410 (for the 5-year discount) or \$2,586 (for the 10-
44
45 year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
46
47 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed

1 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
2
3 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
4

5 **Appraisal and Assessment Calculation Methods Are Flawed**
6

7 27. The "general rule is that each lot, piece, or parcel of land should be assessed
8
9 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
10 Wn.2d at 97.
11

12 28. It is proper to sustain a challenge to an assessment, even without the appraisal
13
14 testimony from the owner, where the objector's expert establishes that the assessment was
15
16 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
17
18 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
19

20 29. The City's appraiser purports to utilize the income method of valuation but
21
22 relied on inaccurate revenue and market data, as discussed further below.
23

24 30. The City's appraiser purports to utilize the comparable sales method of
25
26 valuation, but no City witness attempted "to characterize any one, or all of them, as
27
28 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
29
30 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
31
32 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
33
34 characterize any one, or all of them, as comparable to any particular property within the LID").
35
36 And no City witness could explain how specific adjustments were made to these sales to
37
38 account for value increases due to the hypothesized Before and After Improvements. For this
39
40 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
41

42 31. Special assessment improperly includes value lift from the Before
43
44 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
45
46 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
47

1 Improvements, which WSDOT had independently committed to fund. However, Mr.
2
3 Macaulay did not calculate the actual market value of LID properties in October 2019, and
4
5 did not separately analyze the hypothetical increase to property values attributable to
6
7 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
8
9 current value and then separately calculate a hypothetical "With WSDOT" Before value);
10
11 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
12
13 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
14
15 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
16
17 documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
18
19 occupancy and rates would have been for the commercial properties assuming all of the
20
21 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
22
23 outright omission precludes any independent evaluation of the true market "Before" values.
24
25 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
26
27 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
28
29 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
30
31 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
32
33 other road, pedestrian and landscaping improvements WSDOT had already committed to
34
35 make.

36
37 32. However, because Mr. Macaulay testified that he did include some WSDOT-
38
39 related value-lift in the "Before" values, it follows that part of the special assessment
40
41 improperly is based on value attributable to the WSDOT Improvements. As shown by
42
43 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
44
45 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
46
47 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%

1 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
2 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
3 to properly exclude the value of Before Improvements from the assessments. For these
4 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
5
6
7
8 Sections II.19, II.29, and IV.B.11(a)(ii)
9

10 33. Special benefits were assigned rather than measured. Mr. Macaulay
11 arbitrarily "assigns" special benefits to Before values instead of measuring them for each
12 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
13 Shorette) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/5/2020 (B.
14 O'Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
15 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
16 commercial properties, Taxpayer's experts concluded that Mr. Macaulay based adjustments
17 on hypothesized very small increases to property revenue and very small reductions to cap
18 rates to "calculate" an "After" value due to the coming 2024 LID Improvements.
19 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
20 "professional judgment" that are neither shown nor replicable.
21

22 34. For these reasons, Taxpayer appeals the following portions of the Examiner's
23 Recommendation: Sections II.19, IV.B.11(a)(iii).
24

25 35. Special benefit falls within margin of error. The Final Special Benefit Study
26 applies an estimated value enhancement of less than 4%, which is generally within the
27 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
28 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
29 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
30 of one another, this difference is considered reasonable as it falls within the standard margin
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
2 O'Connor) Hrg. Tr. 201:7-204:8; 3/11/2020 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because
3
4 Mr. Macaulay's micro-special benefit percentages fall far below that 5% margin, "there is
5 no way of authenticating" such incremental changes because "[m]arket forces completely
6
7 obliterate any tiny little noise factor like that." See 3/3/2020 (A. Gibbons) Hrg. Tr. at
8
9 160:23-161:5. Mr. Macaulay agreed during his deposition that 0.25% is too small to
10
11 measure. Macaulay Depo. at 25:17-25. Yet, Mr. Macaulay assigned or purported to measure
12
13 a difference in revenue and cap rates for Taxpayer's property within that margin. For
14
15 Taxpayer's property, the spreadsheets indicate the difference between pre-LID and post-LID
16
17 yearly income is between \$3,357-\$4,700. Additionally, the fact that "Before" values are
18
19 also based on a hypothetical that adds some unstated incremental value to actual 2019 values
20
21 exacerbates this issue—the ability for an appraiser to discern the micro-value differences
22
23 between hypothetical conditions that are so similar (the WSDOT improvements compared to
24
25 the LID improvements) "verges on being ludicrous." 3/3/2020 (A. Gibbons) Hrg. Tr. at
26
27 89:4-90:7.
28
29

30 36. Even if it were possible to accurately tease out such a miniscule hypothetical
31
32 value change due to improvements coming five years later, experts testified that there is no
33
34 data to justify the mathematical adjustments—they are just the appraiser's guesses as to
35
36 what he felt the changes (hypothetically) would be. See 3/12/2020 (J. Gordon) Hrg. Tr. at
37
38 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at
39
40 88:21-88:24 ("you cannot measure one percent difference in a high-rise building for this
41
42 kind of a medium ... it's simply assigned to a before value"). For these reasons, Taxpayer
43
44 appeals the following portions of the Examiner's Recommendation: II.27 and IV.B.4.
45
46
47

1 37. No analysis of value increase attributable to individual components of the
2 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
3 percentage difference between hypothetical Before and After conditions. Throughout his
4 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
5 descriptions in the Addenda even though he testified that he relied on these to calculate
6 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
7 someone might be able to determine how he attributed value to After conditions described in
8 the Addenda, he answered that that was “not the scope of the assignment” because he was
9 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
10 that the six components were not actually a continuous project, that he was viewing them
11 together because the City asked him to, and that if he were to view them independently,
12 there was a low probability that properties in the north would specially benefit from
13 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.

14 38. Not only did he fail to analyze benefits from each of these non-contiguous
15 improvements, his familiarity with descriptions as whole was tenuous at best. See, e.g.,
16 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
17 arose from specific Before/After descriptions in the Addenda); cf. *Anderson v. City of*
18 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
19 objectives that guided regulators’ assessment of architectural plans for buildings along a
20 “signature street” were so vague that they amounted to ad hoc review based on the
21 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that

22 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
23 finding that properties within the LID would benefit from the improvements as a whole. See RCW
24 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
25 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and

1 even though he used the renderings as “visual aid[s] in appraising the property in the before
2 and after” to “visually see what the differences would be,” he could not explain what
3 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
4 when shown a rendering of a two-lane road going down to one-lane in the After condition
5 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
6 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
7 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
8 could explain the depiction of the same trees in the After condition nearly twice as tall as in
9 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
10 of the Examiner’s Recommendation: II.27 and IV.B.4.

21 39. Special assessment is not supported by comparable studies, data or reports.
22 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
23 that the LID Improvements will lead to meaningfully increased real estate values for
24 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
25 comparable sales or information from the “over twenty-five studies and reports” to arrive at
26 very precise special benefit increases for the commercial properties, including Taxpayer’s
27 property. For example, although Mr. Macaulay stated that no single report or study was
28 directly on point due to the unique nature of the LID Improvements (*see, e.g.,* 6/25/2020
29 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
30 parcel-by-parcel analysis other than to say that the studies generally provided “some
31 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*

45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
2 similarities and differences between these improvements and the comparable parks he
3 looked at).
4

5
6 40. Mr. Macaulay purports to rely on Dr. Crompton's research to justify the
7 assignment of incremental increase of 0.5% to 4% to property values within the LID.
8
9 However, among other critiques, Dr. Crompton testified that Mr. Macaulay's reliance on his
10 research misinterprets his work in critical ways, including because the LID Improvements
11 manifest the characteristics of a parkway (not a park), and his research indicates that most of
12 a *park's* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
13 in Seattle). *See* Hrg. Exhibit 94 (Crompton's report). Further, updated research shows park-
14 related value increases are in fact smaller; that estimated increases are "best guesses" rather
15 than predictions of property value increases in a particular city; and that percentages do not
16 account for diminishing returns after taking into account water views, which would be the
17 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
18 topography grants most properties in downtown a water view.
19
20

21 41. Rather than addressing Dr. Crompton's critiques, Mr. Macaulay simply states
22 that this was just one source of information that was not entirely relevant because, among
23 other things, Dr. Crompton's research dealt with parks and not streetscapes. However, Dr.
24 Crompton's critiques were based on Mr. Macaulay's own testimony that the core "park"
25 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
26 180:2 (explaining that for purposes of "drawing boundaries around a park" he was
27 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
28 Crompton concluded that 500 feet via road from "park" improvements is just one or two
29 Seattle blocks and that Mr. Macaulay "inappropriately extend[ed] the LID impact
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 significantly beyond that which the park study indicated (even if it was legitimate to use the
2 park review's findings)." Hrg. Exhibit 94 (Crompton's Report) at 7. Indeed, the LID area
3 extends even past 2,000 feet from the core "park" improvements, which is the outer limit of
4 impact applicable to "community parks"—which the LID Improvements are not. *Id.*
5 Taxpayer's property is not within 500 road network feet from the "park" improvements. *See*
6 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
7
8

9
10
11
12 42. Further, Mr. Macaulay's testimony that he analyzed streetscapes, parkways,
13 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
14 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
15 based on the attention given to Dr. Crompton's work in the Final Study and supporting
16 materials, it was clearly an important—if not *the* most important—source of information for
17 estimating special benefits (especially with respect to the condos).⁷ No City witness
18 adequately explained exactly how Dr. Crompton's research informed ABS Valuation's
19 parcel-by-parcel analysis.
20
21

22
23
24
25 43. The destination parks discussed in the Final Special Benefit Study do not
26 provide reliable, comparable, and valid support for the calculation of special assessments
27 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett's
28 critique of every case study cited concludes the changes to those "dwarf the difference
29 between the before-after condition of the property with LID"); Gibbons 5/2/2018 Letter at 4;
30 Hrg. Exhibit 49 (P. Shorett's Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
31
32
33
34
35
36
37
38
39
40
41

42 ⁷ Of the 62 files in Mr. Macaulay's "2019 Report Info" folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton's study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
2
3 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
4
5 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
6
7 funded by a LID. And in virtually all of those cases, the park improvements dramatically
8
9 restored unimproved or blighted areas, and properties evaluated were within two or three
10
11 blocks of the park.

12
13 44. ABS's claimed reliance on three economic studies to support property value
14
15 increase is also flawed. The HR&A study does not inform what value increases are
16
17 expected from the LID Improvements because it projects increases to tourism from *all* of the
18
19 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
20
21 dissimilar parks in other cities,⁸ making the methodological application to the LID
22
23 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
24
25 conclusion that there would be *no new net visitors* from downtown residents as a result of
26
27 the LID Improvements and could not explain how this impacted his condo analysis.

28
29 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
30
31 Property Values" primarily focused on whether the benefits accrue to the larger community
32
33 rather than properties adjacent to the park. And the 2014 New York City Department of
34
35 Transportation study is not based on real estate transactions and market sales and fails to
36
37 substantiate any link between increased retail sales and property values. Moreover, this
38
39

40
41 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
42
43 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
44
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46
47 expected tourists visiting the LID park was calculated using data from only from New York City, a
notorious tourist destination. More fundamentally, the assumption that visitors are going to increase
their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to how hotel
visitors actually select hotels to stay in.

1 study only looked at impact either directly abutting the streetscape improvement, or a couple
2
3 hundred feet for plaza-like improvements.

4
5 45. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
6
7 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
8
9 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
10
11 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
12
13 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
14
15 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
16
17 asked whether he considered that HR&A's estimated LID impact is six times greater than
18
19 TPL's assessment of Seattle's entire park system, his surmised that it was because the
20
21 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
22
23 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
24
25 assumptions to account for this difference, which may be partly explained by the fact that
26
27 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
28
29 approximately 3.44% of King County tourists visit Seattle primarily because of the city
30
31 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
32
33 waterfront improvements.

34
35 46. Although proximity to the improvements is a key factor in all of these
36
37 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
38
39 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
40
41 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
42
43 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
44
45
46
47

1 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
2
3 Improvements is approximate 20 acres and it is not a community park.⁹

4
5 47. There is no explanation in the Final Study or the supporting materials of how
6
7 the studies or comparable sales were used to derive values for Taxpayer's property. For
8
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

12
13 48. Failure to comply with USPAP. Taxpayer's assessment also rests on a
14
15 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
16
17 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
18
19 recognized) for developing the MAI standards for mass appraisals, testified that the Final
20
21 Study does not meet mass appraisal standards nor allow for independent assessment of the
22
23 accuracy of Mr. Macauley's conclusions.

24
25 49. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
26
27 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
28
29 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
30
31 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
32
33 testimony suggests that he incorrectly believed that the only difference between direct
34
35 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
36
37 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
38
39 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*

40
41
42
43
44
45 ⁹ *See*
46 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
2
3 Gordon uses in doing his limited restricted report”).

4
5 50. But the difference is not only in reporting—mass appraisal techniques must
6
7 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
8
9 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
10
11 parcel approach:

12 The mass appraisal technique is an appraisal method used to evaluate
13 a group of properties that are subject to similar market forces as of a
14 certain date through the use of market data, statistical analysis and
15 testing. As a result, the mass appraisal technique does not require or
16 involve analysis of each individual property’s specific data.
17
18

19 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
20
21

22 51. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
23 universe of properties as a given date using standard methodology, employing common data,
24 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
25 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
26 model” is “a mathematical expression of how supply and demand factors interact in a
27 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
28 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
29 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
30
31

32 52. Regardless of client direction, Mr. Macaulay is required to comply with
33 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
34 economically feasible because it would have taken “an incredible amount of time and cost”
35 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
36
37
38
39
40
41
42
43
44
45
46
47

1 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
2 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
3

4
5 53. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
6 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
7 value, fails to calibrate the model structure to determine the contribution of the individual
8 characteristics affecting value, and does not review the mass appraisal results against actual
9 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
10 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
11
12

13
14
15
16 54. Mr. Macaulay explained that factors like “aesthetic change in the area, the
17 proximity to the elements, the increase in market rent, market vacancy changes,
18 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
19 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
20 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
21 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
22 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
23 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
24
25
26
27
28
29
30
31
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36 relationship between characteristics that affect value, and to calibrate that model to specify how
37 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
38 21). The purpose is to rationally determine what characteristics will create value, and by how much.
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 values were hypothetical, it was not possible to identify matched pair sales and no City
2 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
3 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
4 requires him to explain his model structure.
5
6
7

8
9 55. For these reasons, Taxpayer appeals the following portions of the Examiner’s
10 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
11 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
12 and appeals the Examiner’s denial of that motion.
13
14
15

16
17 56. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
21 property is not even within 500 road network feet from the core park improvements. And,
22 as described above, the special assessment is overstated because the Final Study makes no
23 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
24 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
25 improvements were not in in place—and, in fact, much of the waterfront is a construction
26 zone following removal of the viaduct and now Pier 58 demolition. Under these
27 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
28 Mr. Macaulay at the very least should have discounted the special benefit estimates or
29 waited to perform the Study until the improvements were at least close to complete.
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

Erroneous Pre-Improvement Valuation

57. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's property.

58. The City's Final Study was used to compute the proposed final assessment of SHG RETAIL SPE's property. The City's Study purportedly uses data from the King County Department of Assessments,¹¹ but the pre-improvement valuation information in the Final Study does not accurately reflect this data. For example, the City's Study values SHG RETAIL SPE's property at \$2,676,000 as of October 1, 2019. However, the King County assessor determined the true and fair value of the property to be \$1,628,000, valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's valuation is 164% of King County's assessed value. The Final Special Benefit Study does not explain this difference—or any differences—between its pre-improvement valuation and its supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's Recommendation.

59. Thus, aside from multiple other reasons why computation of the special benefits was flawed (discussed further below), the assessment is based incorrectly on pre-improvement values that do not accurately reflect market data. For these reason, Taxpayer appeals the following portions of the Examiner's Recommendation: Section III, CWF-0433 at p. 106.

¹¹ See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet (providing a "County Link" to the King County Department of Assessment's online "eReal Property" search tool).

Erroneous Computation of Special Benefit

60. “Special benefit” is “the increase in fair market value attributable to the local improvements.” *Doolittle*, 114 Wn.2d at 103. “A benefit that a particular piece of property may receive by reason of the improvement is not measured alone by the physical character or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is the particular tract or property benefited by the entire improvement, and is it assessed proportionately with the other property included within the assessment district?” *Id.* 165–66.

61. The proposed final assessment erroneously overstates the special benefit of LID improvements in a number of ways.

62. Spreadsheets show arbitrary changes to revenue and capitalization rates. For the retail space, Mr. Macaulay assumed revenue would increase by 2.5% (low) and 3.5% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is not possible to accurately conclude that the reason for this level of percentage increase would be due to the LID Improvements, and there appears to be no support for assignment of these percentages. He then uses this hypothesized increased revenue to calculate a new net operating income for the commercial properties and capitalizes that to come up with an “After” valuation.

63. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net operating income remains the same as in the hypothetical “Before” condition, but changes the cap rate. For the retail space, the cap rate goes from 4.5% to 4.35% (low scenario, creating a bigger value increase) and 4.39% (high scenario, creating a lower value increase). There appears to be no support for these changes in the Final Study or any of its supporting materials.

1 64. Mr. Macaulay then averages his four “After” values to arrive at a final special
2 benefit conclusion. For the retail space, this is an increase in property value of 2.99% due to
3 the LID Improvements.
4

5
6 65. Mr. Macaulay offered little justification for his micro adjustments to revenue
7 and capitalization rates. When asked precisely what the basis is for his special benefit
8 percentage increases to revenue for each commercial property, he could not point to
9 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
10 is nothing in the report to allow a reader to understand how he came up with these
11 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
12 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
13 the basis for his belief that certain factors—liked increased connectivity—will increase
14 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
15 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
16 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
17 sources equally even though there was no separate analysis done for food and beverage or
18 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
19 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
20 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
21 properties.
22

23 66. When asked the basis for making such adjustments, Mr. Macaulay pointed to
24 “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7 (“Mr. Lukens helped
25 significantly in that regard in helping, you know, look at probable adjustments”). However,
26 Mr. Lukens testified that he did not review the percentage increases. *See* 6/25/2020 Hrg. Tr.

41
42
43
44
45
46
47

1 at 170:24-172:20.¹² And he did not review any work or data to determine whether the
2 revenue percentage adjustments in the spreadsheets were reasonable, nor did he ever find
3 them to be unreasonable or suggest any changes. *Id.* at 172:3-20. Instead, he appeared to be
4 considering them for the first time on cross examination, testifying that the adjustments
5 “appear to be a kind of sensitivity analysis” and “appear to be a very minor change.” *Id.* at
6 170:18-172:13. Likewise, he had no understanding of what factors went into determining
7 the change in capitalization rates in the spreadsheets. *Id.* at 173:23-174:1. And he did not
8 know how ABS Valuation reconciled the four scenarios to come to final estimated special
9 benefit. *Id.* at 174:22-175:4.

10
11 67. Mr. Macaulay testified that he used comparable sales as a reasonableness
12 check for commercial properties. But as explained above, no City witness has explained
13 how anyone, or all, of the sales are comparable to any particular commercial property within
14 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
15 in order to make sales “comparable,” he would have had to make adjustments to account for
16 Before and After conditions, but there is no way to understand how adjustments were made
17 because he “didn’t do a separate sales comparison approach where we showed adjustments
18 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that

43
44
45
46
47

¹² As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different special benefit and capitalization rate increases to the parking and retail parcels associated with the Grand Hyatt and the Four Season (the property here) even though these sources of revenue receive identical increases when they are part of the same legal parcel as the hotel. But he ends up concluding the same special benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt parcels). When asked whether this was a matter of coincidence, his answer was that is “just our estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even though it is one block closer to the waterfront.

1 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”

2
3 *Id.* at 127:10-128:24.

4
5 68. It also bears noting that any “internal review” of the special benefit estimates
6
7 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
8
9 error. Indeed, given all the same information, he seemed to suggest that it would be
10
11 perfectly reasonable for another experienced appraiser to come up with special benefit
12
13 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
14
15 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
16
17 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
18
19 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
20
21 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
22
23 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
24
25 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
26
27 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
28
29 special because it is arbitrarily assigned; and it is too small to realistically be supported by
30
31 appraisal techniques.

32
33 69. No evidence of special benefit. Meanwhile, there is “no actual evidence from
34
35 any seller or purchaser that the price was higher because of the LID improvements.”
36
37 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
38
39 identified any seller or buyer, or any particular property where the existence of the LID
40
41 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
42
43 explained that the property has not increased rental rates or revenue due to the forthcoming
44
45 LID Improvements, because, among other reasons (and apart from COVID), the
46
47 improvements ABS believes will generate value do not exist, and will not for a number of

1 years to come. There are no comparable sales because the LID Improvements are not in
2 place, nor will they be until the end of 2024 if completed on schedule.
3

4 70. The fair market value of SHG RETAIL SPE's property has not changed due
5 to increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not
6 specially benefited from installation of new water main and fire hydrant where it was
7 already adequately supplied with water and afforded adequate fire protection). And in any
8 event, any value attributable to removal of the viaduct was to be excluded from the
9 assessment calculation.
10

11 71. There is no special benefit because LID improvements in fact diminish the
12 value of SHG RETAIL SPE's property by drawing visitors away towards improvements that
13 do not abut the property, increasing competition, or increasing costs to maintain the
14 property. *See Kusky*, 85 Wn. App. 493 (testimony of owners' expert that LID actually
15 diminished value of property was sufficient to rebut presumption that assessment was
16 proper).
17

18 72. Moreover, the assessment formula is an attempt to distribute costs that do not
19 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
20 "merely a mathematical model that distributes costs").
21

22 73. The Special Benefit Study fails to address whether the \$346,000,000
23 estimated LID project cost takes into account the investment that would have occurred in the
24 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
25 invested. This is a critical component of estimating which properties receive a direct benefit
26 from the improvements, versus more incidental benefits further from the park.
27

28 74. The proposed final assessment substantially exceeds the special benefit to the
29 property and is grossly disproportionate to similarly situated properties within the LID. For
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2
3 Sections II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii).

4
5 **State Environmental Policy Act and Other Environmental Permitting**

6
7 75. While this appeal is not challenging the City's environmental review and
8
9 permitting processes, those processes are relevant in determining the legality of the
10
11 assessments, and to assessing the delivery risk, the present value of the City's plans, and
12
13 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
14
15 pursue projects that have not yet undergone environmental review (thus limiting the choice
16
17 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
18
19 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
20
21 is just beginning. Further, the City has segmented environmental review, and still has a
22
23 gauntlet of federal, state and tribal review processes to complete before it will be clear what
24
25 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
26
27 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
28
29 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
30
31 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
32
33 committing to reconstruction of Pier 58 and major street improvements without
34
35 environmental review, or the City's Final Special Study has improperly included and is
36
37 proposing to assess the Taxpayer the costs and special benefits of improvements that may
38
39 not get built. Either way, it is faulty process.

40
41 **Due Process Rights**

42
43 76. The City's failed to notify SHG RETAIL SPE sufficiently in advance of the
44
45 hearing to allow SHG RETAIL SPE to obtain evidence and prepare to properly challenge
46
47 the assessments. Because LID assessments involve a deprivation of property, affected

1 owners have the right to a hearing as to whether the improvement resulted (or will result) in
2 special benefits to their properties and whether their assessments are proportionate, which
3 necessarily includes the right to adequate notice of the hearing. *Carlisle v. Columbia*
4 *Irrigation Dist.*, 168 Wn.2d 555, 569–70, 229 P.3d 761 (2010).
5
6

7
8
9 77. The LID statute specifies that cities must mail notices giving the time and
10 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
11 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
12 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
13 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
14 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
15 secure their own appraisal), evaluate proportionality of the proposed assessments, and
16 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
17 for anybody to get an appraisal”).
18
19

20
21
22 78. The City’s Notice of Assessment was sent on December 30, 2019. And the
23 Final Special Benefit Study has only been available for public review since January 7, 2020.
24 Due to this short time frame, SHG RETAIL SPE requested a prehearing conference and
25 scheduling order that would preserve and protect SHG RETAIL SPE’s right to analyze and
26 respond to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
27 accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the
28 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
29 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
30 the Examiner’s Recommendation: I.B.
31
32

33 **VII. Relief Requested**

34
35
36
37
38
39
40
41
42
43
44
45
46
47 SHG RETAIL SPE respectfully requests that the City Council:

- 1 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
2 and
3
4 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
5 assessment dated December 30, 2019; or
6
7 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
8 proposed final assessment to \$0 (zero), or such amount as Taxpayer
9 establishes at the hearing in this matter; or
10
11 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
12 and reduce Taxpayer’s assessment using recognized appraisal techniques
13 consistent with USPAP and:
14
15 i. Excluding any property value increase attributable to viaduct removal
16 and other planned WSDOT Improvements;
17
18 ii. Taking into account the effects of the COVID-19 pandemic on the
19 value of Taxpayer’s property and other relevant developments since
20 October 2019;
21
22 iii. Accounting for and excluding (1) any special benefits from existing
23 or planned improvements that already provide similar benefits to
24 Taxpayer’s property, and (2) any special detriments from construction
25 and other anticipated LID-related disamenities;
26
27 iv. Accounting for and including only those actual benefits anticipated to
28 accrue to Taxpayer’s property based on its location relative to Pier 58,
29 Overlook Walk, and the Promenade, and specific elements of the LID
30 Improvements;
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 v. Discounting anticipated special benefits to present value, based on
2 reliable estimates regarding when special benefits will start accruing
3 following completion of the LID Improvements; and
4
5
6
7 vi. Accounting for such other issues specific to Taxpayer's property
8 relevant to calculation of such assessment; and
9
10
11 2. Grant such further relief as the City Council deems just and proper.

22 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

23
24 SHG RETAIL SPE ("Taxpayer") owns the property that is subject to the proposed
25 final assessment described in Section IV.
26

27
28 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
29 include additional arguments relevant to the revised Final Recommendations of the Hearing
30 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
31
32 objection to the assessment, which was based on the Final Study. Taxpayer further timely
33
34 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
35
36 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
37
38 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
39
40 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
41
42 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
43
44
45
46
47

1 as authorized by the Hearing Examiner, including without limitation all records pertaining to
2
3 the November 2020 through February 2021 remand hearing ordered by Council.
4

5 **IV. Amended Arguments on Appeal**

6 SHG RETAIL SPE supplements its appeal of the Hearing Examiner's
7
8 recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local
9
10 Improvement District No. 6751 proposed final assessment dated December 30, 2019 against
11
12 the following property:
13
14

15 King County Parcel No. 6094670020
16 Site Address: 1321 1st Ave, Seattle, Washington
17 Proposed Final LID Assessment for Parcel: \$31,345.76
18

19 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
20
21 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
22
23 amended appeal.
24

25 **A. The Anticipated Special Benefits to Taxpayer's Property should be**
26 **Discounted to Present Value and Assessments Adjusted as Appropriate**
27

28 On remand, the City's appraiser acknowledged that special benefits to parcels can be
29
30 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
31
32 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
33
34 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
35
36 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
37
38 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
39
40 accepted that recommendation. The City's appraiser further acknowledged that benefit
41
42 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
43
44 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
45
46 (benefits to theatre "would be a long enough time out to where it wouldn't measurably affect
47

1 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
2
3 calculations to present value because the general benefits are not anticipated from the LID
4
5 improvements until they are completed in 2024, 5 years after his 2019 assessment, and
6
7 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
8
9 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
10
11 benefit calculation, and related assessments, to account for the delay between the assessment
12
13 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
14
15 standard appraisal practice, and renders the other proposed Waterfront LID special
16
17 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
18
19 “fundamentally wrong methods.”

20
21 All special benefit taxes assessed by a municipality must be based on “actual,
22
23 physical and material [special benefits that are] not merely speculative or conjectural.”
24
25 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
26
27 Additionally, the assessments may not materially exceed the actual special benefit conferred
28
29 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
30
31 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
32
33 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
34
35 discount benefits the City estimated would accrue to the properties from improvements to be
36
37 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
38
39 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
40
41 property while treating all or most others (including Taxpayer’s) differently, and
42
43 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
44
45 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
46
47 for some properties because the benefit are too distant, while assessing other properties as

1 though distant benefits have already been secured. As Taxpayer identified in its September
2
3 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
4
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6
7 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
8
9 reject the improper calculation of the benefit or remand and require the appraiser to discount
10
11 the benefits to net present value.

12
13 **B. In Light of Covid's Continuing Impact on Taxpayer and other**
14 **Downtown Property Owners and other Material Changes Since October**
15 **2019, the LID Should be Cancelled, or at Least Assessments**
16 **Recalculated, to take Into Account Property Value Reductions**

17
18 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
19
20 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
21
22 other relevant developments since October 2019." When Washington's first COVID
23
24 restrictions were imposed in March and April 2020, there was an assumption that they
25
26 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
27
28 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
29
30 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
31
32 gotten much worse. The City has already imposed higher minimum wages and taxes on
33
34 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
35
36 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
37
38 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
39
40 years from completion, as a best case. In current circumstances, a downtown tax to fund
41
42 new, non-essential park improvements against financially strapped taxpayers, and likely
43
44 passed through to financially strapped tenants and customers would be unfair to taxpayers
45
46 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
47

1 rethinks its budget priorities for the next few years, and its potentially funding sources,
2
3 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
4
5 property owners) have a chance to recover, and that any assessment take into account the
6
7 changed circumstances since this appeal process started on February 4, 2020 to avoid
8
9 unnecessarily and perhaps permanently killing downtown properties and businesses in the
10
11 name of bettering them.

12
13 **V. Relief Requested**

14
15 Particularly in light of the Committee's decision not to take further comment from
16
17 appellants, Taxpayer respectfully request that each Committee member carefully review the
18
19 full record transmitted to Council before voting on Taxpayer's appeal.

20
21 SHG RETAIL SPE respectfully reiterates its request from the September 22, 2020
22
23 appeal that the City Council:

- 24
25 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection;
26
27 and
28
29 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
30
31 assessment dated December 30, 2019; or
32
33 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
34
35 proposed final assessment to \$0 (zero), or such amount as Taxpayer
36
37 establishes at the hearing in this matter; or
38
39 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
40
41 and reduce Taxpayer's assessment using recognized appraisal techniques
42
43 consistent with USPAP and:
44
45 i. Excluding any property value increase attributable to viaduct removal
46
47 and other planned WSDOT Improvements;

- 1 ii. Taking into account the effects of the COVID-19 pandemic on the
2 value of Taxpayer's property and other relevant developments since
3 October 2019;
4
5
6 iii. Accounting for and excluding (1) any special benefits from existing
7 or planned improvements that already provide similar benefits to
8 Taxpayer's property, and (2) any special detriments from construction
9 and other anticipated LID-related disamenities;
10
11 iv. Accounting for and including only those actual benefits anticipated to
12 accrue to Taxpayer's property based on its location relative to Pier 58,
13 Overlook Walk, and the Promenade, and specific elements of the LID
14 Improvements;
15
16 v. Discounting anticipated special benefits to present value, based on
17 reliable estimates regarding when special benefits will start accruing
18 following completion of the LID Improvements; and
19
20 vi. Accounting for such other issues specific to Taxpayer's property
21 relevant to calculation of such assessment; and
22
23 2. Grant such further relief as the City Council deems just and proper.

27

28 **III. Statement of Taxpayer's Interest**

29
30 SHG HOTEL SPE LLC owns the property that is subject to the proposed final
31 assessment described in Section IV. The property contains the Four Seasons Hotel,
32
33 overlooks the Puget Sound, and has stairs leading to the waterfront directly adjacent to the
34 property. The basis of the proposed assessment is a Final Special Benefit/Proportionate
35 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
36 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
37 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
38 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
39 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
40
41
42
43
44
45
46
47

1 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
2 to exclude charges for other improvement projects in the Central Waterfront, and
3
4 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
5
6 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
7
8 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
9
10 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
11
12 because construction was not complete on the LID Improvements or the WSDOT
13
14 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
15
16 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
17
18 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
19
20 was based on the Final Study.
21

22 **IV. Matter Under Appeal**

23
24 SHG HOTEL SPE LLC appeals the Hearing Examiner’s recommendation to deny
25
26 Taxpayer’s objection to the City of Seattle’s Waterfront Local Improvement District No.
27
28 6751 proposed final assessment dated December 30, 2019 against the following property:
29

30
31 King County Parcel No. 6094670030
32 Site Address: 1321 1ST AVE, Seattle, Washington
33 Proposed Final LID Assessment for Parcel: \$1,676,214.52
34

35 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
36
37 the evidence and arguments raised before the Hearing Examiner into this appeal. In
38
39 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
40
41 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
42
43
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4
5 As discussed more fully below, Taxpayer specifically appeals the following Findings
6 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
7
8 Pages 61-62, 106, Sections II.6, II.7, II.12, II.13, II.14, II.17, II.18, II.19, II.20, II.21, II.22,
9 II.23, II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2,
10 IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i),
11 IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5,
12 IV.C.7, IV.C.8, IV.C.10, IV.C.11, IV.C.12, IV.C.14, IV.C.18.
13
14

15 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
16 recommendations on material issues raised during Taxpayer's appeal that were supported by
17 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
18 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
19 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
20 recommended anything other than denial of objectors' appeals were where the City's
21 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
22 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
23 special assessments based on "fundamentally wrong methods."
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38

39
40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$4,278,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” *See* Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
47

1 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
2 property (furniture, fixtures and equipment), but not personal property of other types of
3 property. It is not proportionate to assess against hotel personal property and not other
4 personal property. Further, personal property is moveable, the value does not depend on
5 location, and is likely to be fully depreciated and perhaps removed before the LID
6 Improvements are in place. (Note also that personal property accounts are separate, and
7 the City gave no notice of any LID assessment against personal property. The Examiner
8 should have reversed personal property assessments on that basis as well.)
9

10
11 **Legal Requirement:** Must comply with appraisal standards
12

13 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
14 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
15 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
16 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
17 Final Study fails to meet basic standards for admissibility and must be remanded.
18
19

20 **Legal Requirement:** Actual and measurable special benefit
21

22 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
23 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
24 on a host of "micro-judgments" that are not supported by any documentation, nor capable
25 of replication or quality assurance/quality control. The assessments are undocumented,
26 unreliable, and not supported by empirical studies, data, or reports.
27
28

29 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
30 supported by empirical evidence
31

32 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
33 value of parks and other public amenities and on whom ABS purported to rely, testified
34 that ABS had completely misapplied his work and dramatically overstated both the
35 distance to which economic benefits might extend from the LID Improvements and the
36 extent of any anticipated benefit within the potentially benefited area.
37
38
39

40 **Legal Requirement:** Actual special benefit—Must take into account potential
41 disamenities
42

43 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
44 construction, as well as other potential disamenities associated with public places.
45
46
47

1 **Legal Requirement:** Cannot prematurely commit to build

2
3 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
4 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
5 are being imposed. But finalizing the roll is a commitment by the City to build the
6 improvements, which is a violation of legal process and commits the City to build things it
7 may not secure permission to build.
8
9

10 In addition to these general objections, there are property-specific issues raised by
11 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
12 statement below.
13
14
15

16
17 **V. Standard of Review**

18 “When considering the assessment roll, the city council sits ‘as a board of
19 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
20 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
21 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
22 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
23
24
25
26
27

28 The proposed assessments are presumed correct, “unless overcome by clear, cogent
29 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
30 than the heightened presumption of correctness on judicial appeal because “applying these
31 elevated standards at the municipal hearing would afford unwarranted deference to a report
32 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
33 presumption is not evidence and its efficacy is lost when the other party adduces credible
34 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
35 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
36 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
37 presented credible evidence showing that the City’s proposed assessment is arbitrary,
38
39
40
41
42
43
44
45
46
47

1 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
2 to the City to prove the assessments are actual, measurable, special, non-speculative and
3 proportionate. The City failed that burden.
4

5 **VI. Grounds for Appeal**

6 SHG HOTEL SPE LLC appeals the Hearing Examiner's Findings and
7
8 Recommendations on the following grounds.
9

10 **Taxpayer Not Required to Provide A Special Benefit Study**

11
12 1. Contrary to the Examiner's findings and recommendations, there is no
13 requirement that experts or property owners provide an alternative special benefit
14 calculation under these circumstances—to do so would also require the same improper
15 speculation the City's expert engaged in, given the timing and information provided. *See*,
16 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
17 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO
18 Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have
19 explicitly rejected an argument that, because certain protestors 'failed to offer expert
20 testimony at the city council hearing[,] the presumptions [in favor of the assessment] were
21 still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail*
22 *Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskys v. City of Goldendale*, 85 Wn. App. 493,
23 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he provided expert
24 opinion showing that improvements actually diminished value of the property). In fact, no
25 independent evidence is required at all if, for example, objectors show that the assessment
26 was grounded on a fundamentally wrong basis due to an error in the City's appraiser's
27 methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of*
28 *Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example, a property owner
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 could simply point out that the square footage assumed in the City's appraisal was incorrect.
2
3 For these reasons, Taxpayer appeals the following portions of the Examiner's
4
5 Recommendation: Sections II.12, II.13, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.7,
6
7 IV.C.8, and IV.C.11.
8

9 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

10
11 2. RCW 35.43.040 provides cities and towns authority for ordering local
12
13 improvements and for levying and collecting special assessments "on property specially
14
15 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
16
17 upon all the property in accordance with the special benefits conferred thereon." RCW
18
19 35.44.010.

20
21 3. No analysis of general benefits. Special assessments have been "held valid
22
23 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
24
25 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
26
27 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
28
29 they are for the construction of local improvements that are appurtenant to specific land and
30
31 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*

32
33 4. SHG HOTEL SPE property is not specially benefited by the LID
34
35 Improvements. The primary purpose and effect of the LID Improvements are to benefit
36
37 "members of the whole community" and the public at large. *See, e.g., id.* at 565 ("it is plain
38
39 that a public library is for the benefit of the members of the whole community individually
40
41 and collectively who may be served by it"). Mr. Macaulay's own chapter of the LID
42
43 Manual states clearly that appraisers should "[c]onsider general benefits as well as special
44
45
46
47

benefits” (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed that if an appraiser “identifies both general and special benefits, these benefits should be clearly distinguished and explained, and only special benefits should be included in the After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also* 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at 158:13-159:8, 192:8-193:2; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-183:4. It is undisputed that Mr. Macaulay did not analyze or measure general benefits, including those arising from construction necessary to meet basic design standards. *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those construction costs related to meeting design standards which may be general benefits as distinct from construction costs emanating from requirements of the LID project”). To the extent Taxpayer’s property may benefit from the LID improvements, the benefit is general and incidental, and failure to consider general benefits was a fatal flaw in the City’s methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

5. LID Improvements not necessary. Unlike typical LID projects, the Waterfront LID improvements are largely unnecessary to the functionality of any particular property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet

² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference, Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 held invalid where owners would have benefitted equally from increase of only 9 feet);
2
3 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
4
5 intersection for new water main for hydrant held invalid because land was already afforded
6
7 functional hydrant at nearby street). Here, Taxpayer provide evidence that the LID
8
9 Improvements are not necessary to the business of this income-producing property, which
10
11 already has sufficient access to the waterfront, downtown restaurants, and other amenities
12
13 necessary for clients and users. This property has direct access to the waterfront by stairs
14
15 adjacent to the property. The construction of new access points has no additional benefit to
16
17 this property. The fact that there is no case law differentiating between binary improvements
18
19 and parks does not change the law prohibiting assessments on properties already adequately
20
21 served by existing amenities. *See* Examiner’s Recommendation at IV.C.3 (reasoning that
22
23 “no case law is provided to support the differentiation between a hardscape benefit and the
24
25 more ephemeral benefits of park”). Nor does the Examiner’s reasoning excuse the City’s
26
27 failure to account for existing amenities as part of the special benefit calculation. As Dr.
28
29 Crompton testified, existing view amenities may in fact diminish the incremental effect of
30
31 new park improvements on the value of properties, much like turning on a weak light in an
32
33 already brightly illuminated room. *See* Hrg. Exhibit 94 (Crompton’s Report) at 12-13.

34
35 6. To the extent benefits can be considered “special” as opposed to general, they
36
37 are nominal or nonexistent for many properties even in the Central Waterfront, which
38
39 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
40
41 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties’ fair market value did not
42
43 change due to expansion of sewer service *near* owners’ parcel which were already
44
45 connected). Here, the property already has easy access to the waterfront. Furthermore, the
46
47 primary reason users choose this hotel is not due to proximity to the waterfront. Instead, like

1 most downtown hotels, the Four Seasons caters primarily to business travelers attending
2 conventions and meetings. *See*, Hrg. Exhibit 106 (Palladino Decl.), ¶ 11. For this reason,
3
4 Ms. Palladino explained that the Four Seasons does not expect the LID Improvements to
5
6 increase impact on demand for rooms or room rates. *Id.* Even if the City could assess for a
7
8 view change (and it has promised not to assess for viaduct removal), the fair market value of
9
10 SHG HOTEL SPE's property has not changed because the LID Improvements have not
11
12 improved the property's waterfront view or access to the waterfront, nor will they when the
13
14 City anticipates completion in 2024. For these reasons, Taxpayer appeals the following
15
16 portions of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

17
18 7. No analysis of special detriments. The Final Study fails to properly account
19
20 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
21
22 owners for removal and cleanup of underground storage tanks discovered during the
23
24 improvement project). Property values may in fact be negatively impacted by the LID
25
26 Improvements due to increased traffic and noise, increased potential for crime, and
27
28 sanitation issues. Ms. Palladino testified that the assessment is an immediate expense for the
29
30 Four Seasons that comes with no immediate increase in revenue, thereby decreasing
31
32 property values. Hrg. Exhibit 106 (Palladino Decl.), ¶ 13-15. Although Mr. Macaulay
33
34 claims he analyzed impacts on the City's planned elimination of 450 parking stalls on a
35
36 parcel-by-parcel basis, there is no explanation of how lost parking might be a detriment, and
37
38 no property-specific parking analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-
39
40 24; 186:14-187:12; *see also* 6/26/2020 Hrg. Tr. at 153:18-154:19 (did not actually analyze
41
42 impact of decreased parking on condos).

43
44 8. Likewise, there was no analysis of the risks associated with disamenities such
45
46 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
47

1 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
2
3 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
4
5 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
6
7 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
8
9 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
10
11 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
12
13 the maintenance agreement. *Id.* at 13:4-14:2.

14
15 9. There was also no consideration of negative impacts from another four-plus
16
17 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
18
19 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
20
21 law allowing him to dismiss these actual, non-speculative impacts. Because future special
22
23 benefits calculations are inherently speculative, Washington's eminent domain statute
24
25 specifically allows condemnees to postpone special benefits assessments until improvements
26
27 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
28
29 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
30
31 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
32
33 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
34
35 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
36
37 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
38
39 II.25, IV.B.8, and IV.B.9.
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 10. Special benefit estimate is speculative. When calculating a special benefit,
2
3 “[f]air market value cannot include a speculative value.” *Bellevue Plaza, Inc.*, 121 Wn.2d at
4
5 411. “When an appraiser uses a factor ‘beyond the knowledge of reasonable certainty’, it
6
7 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
8
9 P.2d 1078 (1958)).

10 11. Assuming without conceding that one day, the City’s planned LID
11
12 Improvements might increase the value of neighboring properties to some extent, that
13
14 potential benefit is many years away and speculative. While appraisers tolerate some degree
15
16 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
17
18 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
19
20 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
21
22 the level of precision implied in the Final Study due to the size of the LID and use of
23
24 hypotheticals).

25 12. Although LIDs are sometimes finalized prior to completion of improvements,
26
27 this is typically just six month or a year prior, and the assessments are otherwise supported
28
29 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
30
31 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
32
33 will not be realized for four or five years. In the meantime, there is permitting risk,
34
35 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
36
37 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
38
39 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
40
41 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
42
43 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
44
45 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
46
47

1 market value would be as of the date the project would be finally constructed” because
2
3 “[t]here could be a lot of elements in the market that did occur between now and then that
4 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
5 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
6 fluctuate over time” and “I can’t predict the future”).
7
8
9

10 13. The record is clear that while no one can know what “special benefit” might
11 accrue to these properties in four years (if any), we do know that there are no actual benefits
12 now. The LID improvements provide no immediate special benefit to property owners
13 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
14 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
15 sewer system for future users). For example, notwithstanding the questionable hypothesis
16 that hotels will benefit from an expected increase in tourism (higher room rates or
17 occupancy) when the improvements are complete, it is undisputed that tourists are not
18 coming in larger numbers and paying higher room rates now because of something
19 happening five years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23;
20 O’Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased today for 18
21 months would rent at a higher rate due to improvements coming in 2024).
22
23
24
25
26
27
28
29
30
31
32
33

34 14. Further, there are no “plans and specifications” on file with the Clerk’s Office
35 for the LID Improvements, and it is unlawful to move to final assessments without such
36 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
37 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
38 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
39 dollars on projects still early in the design process. *See* Washington Attorney General
40 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
41
42
43
44
45
46
47

1 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
2 of programs and included “only so much of the overall costs” that took place within and
3 benefitted the assessed properties).
4

5
6 15. The COVID-19 crisis highlights how fundamentally speculative and unfair it
7 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
8 anticipated to be delivered five years later. Even before COVID, it was speculative to
9 assume that market highs experienced in October 2019¹ would be sustained through 2024,
10 after an already extraordinarily long expansion period. *See*, 3/3/2020 (A. Gibbons) Hrg. Tr.
11 at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my
12 analysis in October 2019, who would have thought that this COVID issue would happen?”
13 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was
14 that the market was going to continue to go up”—in fact, it did not for Taxpayer’s property.
15 *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that downtown hotel values had
16 already dropped an estimated 10-15% from their October 2019 levels, and occupancy rates
17 were at zero or in single digits. *See* Gordon Decl. (dated 4/21/2020) at ¶ 9. Hotels without
18 guests will derive no benefit, special or otherwise, from the planned LID Improvements.
19 And even assuming hotels recover prior to 2024, there is no basis for assuming that values
20 hypothesized in October 2019 will remain relevant; they are already irrelevant. *See* Gibbons
21 Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although COVID does not change actual
22 values as of October 2019 (*see* Examiner’s Recommendation at 109), the pandemic has
23 impacted *current* values and rendered the hypothetical October 2019 Final Study valuations
24 outdated.
25

26
27 16. As another example of how future events could affect the accuracy and
28 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing

1 Examiner re-open the record to allow the City to explain whether the assessments against
2 property owners within the LID are, in fact, being used by the City to fund the emergency
3 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
4 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
5 would be improperly imposing costs on property owners within the LID for improvements
6 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
7 habitat and City infrastructure—this does not provide any special benefit to LID property
8 owners.
9

10
11 17. There is also no certainty the improvements will be delivered on time. Mr.
12 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
13 delay in construction schedule would not constitute a “material change” under the City
14 Council’s ordinance authorizing the improvements. In other words, the City cannot
15 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
16 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
17 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
18 potential delays and project changes inherent in those processes, that call into question the

1 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
2 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
3 Decl., dated 4/15/2020).
4

5
6 18. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
7 he could not point to a single one where the assessment roll was finalized five years in
8 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
9 he has never recommended final special assessments based on designs less than 30 percent
10 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
11 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
12 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
13 at 66:17-25. He performed no independent due diligence to determine the reliability of the
14 City’s estimates for completion of the LID Improvements, or to ensure that proposed
15 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
16 agreed that if any of his assumptions are incorrect, his opinion of market value would need
17 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
18 68:11-18.
19
20
21
22
23
24
25
26
27
28
29
30
31

32 19. The City has cited no authority—and Taxpayer is aware of none—that
33 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
34 assess taxes for “actual” special benefits that will not accrue for another five years (if all
35 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
36 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
37 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
38 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
39
40
41
42
43
44
45
46
47

1 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
2
3 IV.C.14, and IV.C.18.

4
5 20. Failure to discount special benefit estimates to account for risks and present
6 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
7
8 have accounted for risks associated with delivery of the improvements (including permitting
9
10 risk, construction risk, general economic risk) and any special damages associated with
11
12 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
13
14 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
15
16 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
17
18 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
19
20 the impact of future conditions [through] discounted cash flow analysis.").

21
22
23 21. Mr. Macaulay acknowledged that appraisers can discount the value of a
24
25 future condition not in place at the date of valuation and can discount for the time value of
26
27 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
28
29 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
30
31 Discounting would also have been consistent with his approach for analyzing special
32
33 benefits to vacant land. He testified that the difference between similarly situated vacant
34
35 sites slated for development and already developed sites was that the labor, capital and risks
36
37 associated with development had not yet been borne for those vacant sites. Therefore, the
38
39 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
40
41 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
42
43 fully permitted, has not completed environmental review, and has not reached full design is
44
45 presently worth significantly less.
46
47

1 22. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
2 present value, an appraiser would consider discount rates for land development to account
3 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
4 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
5 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
6 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
7
8
9
10
11

12 23. Applying the Q19 Korpacz rates and assuming arguendo that Macauley's
13 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
14 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
15 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
16 ignoring momentarily all of the other methodological and other flaws discussed here and in
17 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
18 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
19 exceeds special benefits when reduced to present value. Further, to the extent the City is
20 arguing that because they are permitted to assess 100% of the special benefit, the special
21 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
22 is again wrong. After applying proper discounting, the City's proposed special benefit
23 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
24 100% of the total estimated special benefit.
25
26
27
28
29
30
31
32
33
34
35
36
37

38 24. But even the assumption that the LID improvements would deliver benefits
39 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
40 on. Rather, those studies demonstrate that a discount period of five years is conservative.
41 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
42 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
43
44
45
46
47

1 indicates that during the construction period, the Greenway district “significantly” lagged in
2 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
3 “reorientation of development to capture value takes time”—specifically, 12-13 years. *Id.* at
4 30-31 (discussing New York City High Line and San Francisco Embarcadero
5 improvements). Given the lengthy delay, any prediction of future special benefits is
6 speculative, especially during the construction phase where values are likely to decline.
7
8 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
9 Improvements take a similarly long period of time after they are complete to start producing
10 tangible property value benefits, each additional year of delay results in further discount to
11 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
12 A.
13
14

15 25. Applying the same discounting methods described above and in Mr. Gibbons
16 declaration, the 2019 net present value of ABS’s estimate for benefits that actually start
17 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
18 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
19 100% assessment should be no more than \$402,987.60. Anything more would permit the
20 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
21 place and providing benefit, and ignore the risks, construction disamenity, and time value of
22 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
23 would counsel that the assessment should be only 39.2% of that assessment cap, or
24 \$157,971.14.
25
26

27 26. Attachment C includes two Excel spreadsheets applying these discounting
28 methods to Taxpayer’s assessment. It is undisputed that special benefits will not actually
29 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 demonstrates that discounting the City’s hypothetical October 2019 special benefits to
2 present value would reduce Taxpayer’s assessment to \$575,088, exclusive of any other
3 flaws in the City’s proposed assessment. The second spreadsheet shows even more drastic
4 reductions after taking into account: (1) Taxpayer’s “Before” value now excluding personal
5 property; (2) a rough discount for property value loss due to COVID-19; and (3) discounting
6 to present value for 5 years (*i.e.*, from 2024 when the City anticipates completing the LID
7 Improvements) and 10 years (*i.e.*, from 2029 to account for the time it takes for the
8 improvements to capture property value). After such reductions, Taxpayer’s assessment
9 would be just \$492,882 (for the 5-year discount) or \$135,427 (for the 10-year discount).
10 Neither of these spreadsheets address other issues raised by Taxpayer’s appeal, but are
11 intended to help demonstrate how unfair and inflated the City’s proposed hypothetical
12 assessment is. The Hearing Examiner’s Recommendation simply dismisses Taxpayer’s
13 discounting argument without legal or factual analysis; that failure is error.

24 **Appraisal and Assessment Calculation Methods Are Flawed**

25 27. The “general rule is that each lot, piece, or parcel of land should be assessed
26 separately” for purposes of local improvement district special assessment. *Doolittle*, 114
27 Wn.2d at 97.

28 28. It is proper to sustain a challenge to an assessment, even without the appraisal
29 testimony from the owner, where the objector’s expert establishes that the assessment was
30 “clearly grounded upon a fundamentally wrong basis” due to an error in the method
31 employed by the City’s appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.

32 29. The City’s appraiser purports to utilize the income method of valuation but
33 relied on inaccurate revenue and market data, as discussed further below.

1 30. The City’s appraiser purports to utilize the comparable sales method of
2 valuation, but no City witness attempted “to characterize any one, or all of them, as
3 comparable to [Taxpayer’s property].” *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
4 “several serious flaws” in ABS’s LID analysis in that case, including that the appraiser
5 “attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
6 characterize any one, or all of them, as comparable to any particular property within the LID”).
7 And no City witness could explain how specific adjustments were made to these sales to
8 account for value increases due to the hypothesized Before and After Improvements. For this
9 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
10

11 31. Special assessment improperly includes value lift from the Before
12 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
13 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15 Macaulay did not calculate the actual market value of LID properties in October 2019, and
16 did not separately analyze the hypothetical increase to property values attributable to
17 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
18 current value and then separately calculate a hypothetical “With WSDOT” Before value);
19 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); Gibbons 1/30/2020 Letter
20 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
21 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
22 documented basis or support, Mr. Macaulay simply “ma[de] a judgment a call” on what
23 occupancy and rates would have been for the commercial properties assuming all of the
24 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
25 outright omission precludes any independent evaluation of the true market “Before” values.
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 See 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
2
3 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
4
5 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
6
7 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
8
9 other road, pedestrian and landscaping improvements WSDOT had already committed to
10
11 make.

12
13 32. However, because Mr. Macaulay testified that he did include some WSDOT-
14
15 related value-lift in the “Before” values, it follows that part of the special assessment
16
17 improperly is based on value attributable to the WSDOT Improvements. As shown by
18
19 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
20
21 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
22
23 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
24
25 special benefit assignment would result in \$300,000 of over-assessment. See Gibbons Decl.
26
27 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
28
29 to properly exclude the value of Before Improvements from the assessments. For these
30
31 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
32
33 Sections II.19, II.29, and IV.B.11(a)(ii).

34
35 33. Special benefits were assigned rather than measured. Mr. Macaulay
36
37 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
38
39 property. See 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
40
41 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/5/2020 (B.
42
43 O’Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
44
45 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
46
47 commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based adjustments

1 on hypothesized very small increases to property revenue and very small reductions to cap
2 rates to “calculate” an “After” value due to the coming 2024 LID Improvements.

3
4 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
5
6 “professional judgment” that are neither shown nor replicable.
7

8
9 34. For these reasons, Taxpayer appeals the following portions of the Examiner’s
10 Recommendation: Sections II.19, IV.B.11(a)(iii).
11

12
13 35. Special benefit falls within margin of error. The Final Special Benefit Study
14 applies an estimated value enhancement of less than 4%, which is generally within the
15 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
16 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
17 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
18 of one another, this difference is considered reasonable as it falls within the standard margin
19 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
20 O’Connor) Hrg. Tr. 201:7-204:8; 3/11/2020 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because
21 Mr. Macaulay’s micro-special benefit percentages fall far below that 5% margin, “there is
22 no way of authenticating” such incremental changes because “[m]arket forces completely
23 obliterate any tiny little noise factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
24 160:23-161:5. Mr. Macaulay agreed during his deposition that 0.25% is too small to
25 measure. Macaulay Depo. at 25:17-25. Yet, Mr. Macaulay assigned or purported to measure
26 a difference in revenue and cap rates for Taxpayer’s property within that margin.
27

28
29 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
30
31 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
32
33 appraiser to discern the micro-value differences between hypothetical conditions that are so
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 similar (the WSDOT improvements compared to the LID improvements) “verges on being
2 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.

3
4 36. Even if it were possible to accurately tease out such a miniscule hypothetical
5 value change due to improvements coming five years later, experts testified that there is no
6 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
7 what he felt the changes (hypothetically) would be. See 3/12/2020 (J. Gordon) Hrg. Tr. at
8 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at
9 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
10 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
11 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

12
13 37. No analysis of value increase attributable to individual components of the
14 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
15 percentage difference between hypothetical Before and After conditions. Throughout his
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17 descriptions in the Addenda even though he testified that he relied on these to calculate
18 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
19 someone might be able to determine how he attributed value to After conditions described in
20 the Addenda, he answered that that was “not the scope of the assignment” because he was
21 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
22 that the six components were not actually a continuous project, that he was viewing them
23 together because the City asked him to, and that if he were to view them independently,
24 there was a low probability that properties in the north would specially benefit from
25 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.

1 38. Not only did he fail to analyze benefits from each of these non-contiguous
2 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.*,
3 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
4 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
5 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
6 objectives that guided regulators’ assessment of architectural plans for buildings along a
7 “signature street” were so vague that they amounted to ad hoc review based on the
8 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that
9 even though he used the renderings as “visual aid[s] in appraising the property in the before
10 and after” to “visually see what the differences would be,” he could not explain what
11 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
12 when shown a rendering of a two-lane road going down to one-lane in the After condition
13 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
14 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
15 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
16 could explain the depiction of the same trees in the After condition nearly twice as tall as in
17 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
18 of the Examiner’s Recommendation: II.27 and IV.B.4.

34
35
36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 39. Special assessment is not supported by comparable studies, data or reports.
2
3 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
4 that the LID Improvements will lead to meaningfully increased real estate values for
5 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
6
7 comparable sales or information from the "over twenty-five studies and reports" to arrive at
8
9 very precise special benefit increases for hotels, including Taxpayer's property. For
10
11 example, although Mr. Macaulay stated that no single report or study was directly on point
12
13 due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020 Hrg. Tr. at 146:21-
14
15 147:8), he could not explain how he made specific adjustments in his parcel-by-parcel
16
17 analysis other than to say that the studies generally provided "some background to base
18
19 decisions on." *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also* 6/26/2020 Hrg Tr. at 118:7-
20
21 19 (did not make any specific adjustments to account for similarities and differences
22
23 between these improvements and the comparable parks he looked at).
24
25

26 40. Mr. Macaulay purports to rely on Dr. Crompton's research to justify the
27
28 assignment of incremental increase of 0.5% to 4% to property values within the LID.
29
30 However, among other critiques, Dr. Crompton testified that Mr. Macaulay's reliance on his
31
32 research misinterprets his work in critical ways, including because the LID Improvements
33
34 manifest the characteristics of a parkway (not a park), and his research indicates that most of
35
36 a *park's* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
37
38 in Seattle). *See* Hrg. Exhibit 94 (Crompton's report). Further, updated research shows park-
39
40 related value increases are in fact smaller; that estimated increases are "best guesses" rather
41
42 than predictions of property value increases in a particular city; and that percentages do not
43
44 account for diminishing returns after taking into account water views, which would be the
45
46
47

1 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
2 topography grants most properties in downtown a water view.
3

4
5 41. Rather than addressing Dr. Crompton's critiques, Mr. Macaulay simply states
6 that this was just one source of information that was not entirely relevant because, among
7 other things, Dr. Crompton's research dealt with parks and not streetscapes. However, Dr.
8 Crompton's critiques were based on Mr. Macaulay's own testimony that the core "park"
9 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
10 180:2 (explaining that for purposes of "drawing boundaries around a park" he was
11 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
12 Crompton concluded that 500 feet via road from "park" improvements is just one or two
13 Seattle blocks and that Mr. Macaulay "inappropriately extend[ed] the LID impact
14 significantly beyond that which the park study indicated (even if it was legitimate to use the
15 park review's findings)." Hrg. Exhibit 94 (Crompton's Report) at 7. Indeed, the LID area
16 extends even past 2,000 feet from the core "park" improvements, which is the outer limit of
17 impact applicable to "community parks"—which the LID Improvements are not. *Id.*
18 Taxpayer's property is not within 500 road network feet from the "park" improvements. *See*
19 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
20
21

22
23 42. Further, Mr. Macaulay's testimony that he analyzed streetscapes, parkways,
24 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
25 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
26 based on the attention given to Dr. Crompton's work in the Final Study and supporting
27 materials, it was clearly an important—if not *the* most important—source of information for
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 estimating special benefits (especially with respect to the condos).⁷ No City witness
2 adequately explained exactly how Dr. Crompton's research informed ABS Valuation's
3 parcel-by-parcel analysis.
4

5
6 43. The destination parks discussed in the Final Special Benefit Study do not
7 provide reliable, comparable, and valid support for the calculation of special assessments
8 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett's
9 critique of every case study cited concludes the changes to those "dwarf the difference
10 between the before-after condition of the property with LID"); Gibbons 5/2/2018 Letter at 4;
11 Hrg. Exhibit 49 (P. Shorett's Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
12 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
13 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
14 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
15 funded by a LID. And in virtually all of those cases, the park improvements dramatically
16 restored unimproved or blighted areas, and properties evaluated were within two or three
17 blocks of the park.
18
19

20
21 44. ABS's claimed reliance on three economic studies to support property value
22 increase is also flawed. The HR&A study does not inform what value increases are
23 expected from the LID Improvements because it projects increases to tourism from *all* of the
24 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
25

40
41
42 ⁷ Of the 62 files in Mr. Macaulay's "2019 Report Info" folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton's study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 dissimilar parks in other cities,⁸ making the methodological application to the LID
2 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
3 conclusion that there would be *no new net visitors* from downtown residents as a result of
4 the LID Improvements and could not explain how this impacted his condo analysis.
5
6
7
8
9 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
10 Property Values" primarily focused on whether the benefits accrue to the larger community
11 rather than properties adjacent to the park. And the 2014 New York City Department of
12 Transportation study is not based on real estate transactions and market sales and fails to
13 substantiate any link between increased retail sales and property values. Moreover, this
14 study only looked at impact either directly abutting the streetscape improvement, or a couple
15 hundred feet for plaza-like improvements.
16
17
18
19
20
21

22 45. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
23 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
24 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
25 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
26 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
27 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
28 asked whether he considered that HR&A's estimated LID impact is six times greater than
29 TPL's assessment of Seattle's entire park system, he surmised that it was because the
30
31
32
33
34
35
36
37
38
39

40
41 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
42 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
43 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
44 expected tourists visiting the LID park was calculated using data from only from New York City, a
45 notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to
46 increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to
47 how hotel visitors actually select hotels to stay in.

1 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
2 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
3 assumptions to account for this difference, which may be partly explained by the fact that
4 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
5 approximately 3.44% of King County tourists visit Seattle primarily because of the city
6 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
7 waterfront improvements.
8
9

10
11
12
13
14
15 46. Although proximity to the improvements is a key factor in all of these
16 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
17 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
18 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
19 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
20 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
21 Improvements is approximate 20 acres and it is not a community park.⁹
22
23
24
25
26
27

28
29 47. There is no explanation in the Final Study or the supporting materials of how
30 the studies or comparable sales were used to derive values for Taxpayer's property. For
31 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
32 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
33
34
35
36

37 48. Failure to comply with USPAP. Taxpayer's assessment also rests on a
38 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
39 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
40
41
42
43

44 ⁹ *See*
45 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 recognized) for developing the MAI standards for mass appraisals, testified that the Final
2 Study does not meet mass appraisal standards nor allow for independent assessment of the
3 accuracy of Mr. Macauley's conclusions.
4

5
6 49. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
7 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
8 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
9 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
10 testimony suggests that he incorrectly believed that the only difference between direct
11 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
12 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
13 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
14 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
15 Gordon uses in doing his limited restricted report").
16

17 50. But the difference is not only in reporting—mass appraisal techniques must
18 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
19 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
20 parcel approach:
21

22 The mass appraisal technique is an appraisal method used to evaluate
23 a group of properties that are subject to similar market forces as of a
24 certain date through the use of market data, statistical analysis and
25 testing. As a result, the mass appraisal technique does not require or
26 involve analysis of each individual property's specific data.
27

28 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
29

30 51. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
31 universe of properties as a given date using standard methodology, employing common data,
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
2 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
3 model” is “a mathematical expression of how supply and demand factors interact in a
4 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
5 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
6 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
7
8
9
10
11

12 52. Regardless of client direction, Mr. Macaulay is required to comply with
13 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
14 economically feasible because it would have taken “an incredible amount of time and cost”
15 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
16 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
17 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
18
19
20
21
22

23 53. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
24 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
25 value, fails to calibrate the model structure to determine the contribution of the individual
26 characteristics affecting value, and does not review the mass appraisal results against actual
27 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
28 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
29
30
31
32
33
34
35
36

37 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
38 relationship between characteristics that affect value, and to calibrate that model to specify how
39 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
40 21). The purpose is to rationally determine what characteristics will create value, and by how much.
41 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
42 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
43 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
44 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
45 include explanation of the model specification, data requirements, calibration methods, and
46 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
47

1 54. Mr. Macaulay explained that factors like “aesthetic change in the area, the
2 proximity to the elements, the increase in market rent, market vacancy changes,
3 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
4 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
5 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
6 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
7 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
8 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
9 values were hypothetical, it was not possible to identify matched pair sales and no City
10 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
11 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
12 requires him to explain his model structure.
13
14

15 55. For these reasons, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
17 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
18 and appeals the Examiner’s denial of that motion.
19
20

21 56. Finally, Taxpayer’s property is not appurtenant—or even in close
22 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
23 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
24 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
25 property is not even within 500 road network feet from the core park improvements. And,
26
27

28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 as described above, the special assessment is overstated because the Final Study makes no
2 attempt to determine general benefits, existing amenities for Taxpayer's specific property, or
3 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
4 improvements were not in in place—and, in fact, much of the waterfront is a construction
5 zone following removal of the viaduct and now Pier 58 demolition. Under these
6 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
7 Mr. Macaulay at the very least should have discounted the special benefit estimates or
8 waited to perform the Study until the improvements were at least close to complete.
9

10 **Erroneous Pre-Improvement Valuation**

11 57. The proposed final assessment erroneously overstates the pre-improvement
12 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
13 benefit to the Taxpayer's property.
14

15 58. The City's Final Study was used to compute the proposed final assessment of
16 SHG HOTELS SPE's property. The City's Study purportedly uses data from the King
17 County Department of Assessments,¹¹ but the pre-improvement valuation information in the
18 Final Study does not accurately reflect this data. For example, the City's Study values SHG
19 HOTELS SPE's property at \$142,639,000 as of October 1, 2019. However, the King
20 County assessor determined the true and fair value of the property to be \$59,510,600, valued
21 in 2019 for tax year 2020. In other words, the Final Special Benefit Study's valuation is
22 239% of King County's assessed value. The Final Special Benefit Study does not explain
23 this difference—or any differences—between its pre-improvement valuation and its
24

44
45 ¹¹ See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet
46 (providing a "County Link" to the King County Department of Assessment's online "eReal
47 Property" search tool).

1 supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the
2 Examiner's Recommendation.
3

4 59. Thus, aside from multiple other reasons why computation of the special
5 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
6 improvement values that do not accurately reflect market data. For these reason, Taxpayer
7 appeals the following portions of the Examiner's Recommendation: Section III at 106.
8
9

10 11 12 13 **Erroneous Computation of Special Benefit**

14 60. "Special benefit" is "the increase in fair market value attributable to the local
15 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
16 may receive by reason of the improvement is not measured alone by the physical character
17 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
18 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is
19 the particular tract or property benefited by the entire improvement, and is it assessed
20 proportionately with the other property included within the assessment district?" *Id.* 165–
21 66.
22
23
24
25
26
27
28
29

30 61. The proposed final assessment erroneously overstates the special benefit of
31 LID improvements in a number of ways.
32
33

34 62. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
35 the Four Seasons, Mr. Macaulay assumed room/rental rates would increase by 1.9% (low)
36 and 2.4% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is not
37 possible to accurately conclude that the reason for this level of percentage increase would be
38 due to the LID Improvements, and there appears to be no support for assignment of these
39 percentages. Based on formulas in the spreadsheets, Mr. Macaulay then uses these same
40 percentages (1.9% and 2.4%) to increase food and beverage revenue. He then uses this
41
42
43
44
45
46
47

1 hypothesized increased revenue to calculate a new net operating income for the commercial
2 properties and capitalizes that to come up with an “After” valuation.
3

4
5 63. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
6 operating income remains the same as in the hypothetical “Before” condition, but changes
7 the cap rate. For the Four Seasons, the cap rate goes from 7.25% to 7.07% (low scenario,
8 creating a bigger value increase) and 7.00% (high scenario, creating a lower value increase).
9
10 Mr. Gordon likewise explained that cap rate changes of .18% or .25% are not typically
11 measurable, and there appears to be no support for these changes in the Final Study or any
12 of its supporting materials.
13
14

15 64. Mr. Macaulay then averages his four “After” values to arrive at a final special
16 benefit conclusion. For the Four Seasons, this is an increase in property value of 3.0% due
17 to the LID Improvements.
18

19 65. Mr. Macaulay offered little justification for his micro adjustments to revenue
20 and capitalization rates. When asked precisely what the basis is for his special benefit
21 percentage increases to revenue for each commercial property, he could not point to
22 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
23 is nothing in the report to allow a reader to understand how he came up with these
24 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
25 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
26 the basis for his belief that certain factors—liked increased connectivity—will increase
27 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
28 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
29 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
30 sources equally even though there was no separate analysis done for food and beverage or
31
32
33
34

42
43
44
45
46
47

1 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
2 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
3 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
4 properties.
5
6

7
8 66. When asked the basis for making such adjustments, Mr. Macaulay pointed to
9 “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7 (“Mr. Lukens helped
10 significantly in that regard in helping, you know, look at probable adjustments”). However,
11 Mr. Lukens testified that he did not review the percentage increases. *See* 6/25/2020 Hrg. Tr.
12 at 170:24-172:20.¹² And he did not review any work or data to determine whether the
13 revenue percentage adjustments in the spreadsheets were reasonable, nor did he ever find
14 them to be unreasonable or suggest any changes. *Id.* at 172:3-20. Instead, he appeared to be
15 considering them for the first time on cross examination, testifying that the adjustments
16 “appear to be a kind of sensitivity analysis” and “appear to be a very minor change.” *Id.* at
17 170:18-172:13. Likewise, he had no understanding of what factors went into determining
18 the change in capitalization rates in the spreadsheets. *Id.* at 173:23-174:1. And he did not
19 know how ABS Valuation reconciled the four scenarios to come to final estimated special
20 benefit. *Id.* at 174:22-175:4.
21

29
30
31
32
33
34
35
36
37

38 ¹² As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different
39 special benefit and capitalization rate increases to the parking and retail parcels associated with the
40 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
41 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special
42 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
43 parcels). When asked whether this was a matter of coincidence, his answer was that is “just our
44 estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
45 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
46 though it is one block closer to the waterfront.
47

1 67. Mr. Macaulay testified that he used comparable sales as a reasonableness
2 check for commercial properties. But as explained above, no City witness has explained
3 how anyone, or all, of the sales are comparable to any particular commercial property within
4 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
5 in order to make sales “comparable,” he would have had to make adjustments to account for
6 Before and After conditions, but there is no way to understand how adjustments were made
7 because he “didn’t do a separate sales comparison approach where we showed adjustments
8 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
9 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
10 *Id.* at 127:10-128:24.

11 68. It also bears noting that any “internal review” of the special benefit estimates
12 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
13 error. Indeed, given all the same information, he seemed to suggest that it would be
14 perfectly reasonable for another experienced appraiser to come up with special benefit
15 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
16 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
17 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
18 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
19 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
20 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
21 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
22 *Recommendation* at IV.B.4. Thus, the special assessment is not actual, measurable or
23 special because it is arbitrarily assigned; and it is too small to realistically be supported by
24 appraisal techniques.

1 69. No evidence of special benefit. Meanwhile, there is “no actual evidence from
2
3 any seller or purchaser that the price was higher because of the LID improvements.”
4
5 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
6
7 identified any seller or buyer, or any particular property where the existence of the LID
8
9 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
10
11 explained that the property has not increased rental rates or revenue due to the forthcoming
12
13 LID Improvements, because, among other reasons (and apart from COVID), the
14
15 improvements ABS believes will generate value do not exist, and will not for a number of
16
17 years to come. There are no comparable sales because the LID Improvements are not in
18
19 place, nor will they be until the end of 2024 if completed on schedule.

20
21 70. The fair market value of SHG HOTEL SPE’s property has not changed due
22
23 to increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not
24
25 specially benefited from installation of new water main and fire hydrant where it was
26
27 already adequately supplied with water and afforded adequate fire protection). And in any
28
29 event, any value attributable to removal of the viaduct was to be excluded from the
30
31 assessment calculation.

32
33 71. There is no special benefit because LID improvements in fact diminish the
34
35 value of SHG HOTEL’s property by exacerbating potential security problems and making
36
37 parking less available. *See Kusky*, 85 Wn. App. 493 (testimony of owners’ expert that LID
38
39 actually diminished value of property was sufficient to rebut presumption that assessment
40
41 was proper).

42
43 72. Moreover, the assessment formula is an attempt to distribute costs that do not
44
45 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
46
47 “merely a mathematical model that distributes costs”).

1 73. The Special Benefit Study fails to address whether the \$346,000,000
2
3 estimated LID project cost takes into account the investment that would have occurred in the
4
5 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
6
7 invested. This is a critical component of estimating which properties receive a direct benefit
8
9 from the improvements, versus more incidental benefits further from the park.

10 74. Assessments are disproportionate. Taxpayer also presented evidence
11
12 showing that the assessments are disproportionate. For example, the City disproportionately
13
14 assessed hotels a greater percentage of the cost of the Improvements even though there no
15
16 evidence that hotel properties will in fact benefit. And even within the hotels, the
17
18 assessments are disproportionate. Mr. Gordon testified that the differences between the
19
20 special benefit increases for the Hyatt at Olive 8, the Grand Hyatt, and Hyatt Regency—
21
22 which are all very close together—made little sense and raised doubts as to
23
24 proportionality. The Marriott is assessed a 3.2% special assessment, whereas comparable
25
26 hotels along the waterfront received an estimated 0.97% increase in value. Hrg. Exhibit 108
27
28 (Rash Decl.), ¶ 11.

29
30 75. Mr. Macaulay also included personal property in his valuation of hotels even
31
32 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
33
34 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
35
36 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
37
38 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
39
40 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
41
42 receiving a disproportionately high LID assessment in comparison to other property types,
43
44 since hotels were the only property type subject to personal property LID assessments.
45
46 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
47

1 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
2 notice procedures because hotel property owners only received notice that their real estate
3 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
4

5
6 76. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
7 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
8 a television at the waterfront Marriott is assigned a greater special benefit than the same
9 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
10 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
11 unreasonable to assign a value lift to personal property that is replaceable at the same cost
12 and may be obsolete before the LID improvements are even completed. *See* Second Decl. of
13 Shorette ISO Closing Stmt., ¶ 7 (dated 7/7/2020). Further, personal property is highly
14 depreciable, and likely to be fully depreciated or potentially discarded by 2024. *Id.*; *see also*
15 Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must be redone to correct
16 for this error.
17

18
19 77. The proposed final assessment substantially exceeds the special benefit to the
20 property and is grossly disproportionate to similarly situated properties within the LID. For
21 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
22 Sections II.17, II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), IV.C.10.
23

24 **State Environmental Policy Act and Other Environmental Permitting**

25
26 78. While this appeal is not challenging the City's environmental review and
27 permitting processes, those processes are relevant in determining the legality of the
28 assessments, and to assessing the delivery risk, the present value of the City's plans, and
29 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
30 pursue projects that have not yet undergone environmental review (thus limiting the choice
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
2 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
3 is just beginning. Further, the City has segmented environmental review, and still has a
4 gauntlet of federal, state and tribal review processes to complete before it will be clear what
5 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
6 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
7 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
8 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
9 committing to reconstruction of Pier 58 and major street improvements without
10 environmental review, or the City's Final Special Study has improperly included and is
11 proposing to assess the Taxpayer the costs and special benefits of improvements that may
12 not get built. Either way, it is faulty process.

13 **Due Process Rights**

14 79. The City's failed to notify SHG HOTEL SPE sufficiently in advance of the
15 hearing to allow SHG HOTEL SPE to obtain evidence and prepare to properly challenge the
16 assessments. Because LID assessments involve a deprivation of property, affected owners
17 have the right to a hearing as to whether the improvement resulted (or will result) in special
18 benefits to their properties and whether their assessments are proportionate, which
19 necessarily includes the right to adequate notice of the hearing. *Carlisle v. Columbia*
20 *Irrigation Dist.*, 168 Wn.2d 555, 569–70, 229 P.3d 761 (2010).

21 80. The LID statute specifies that cities must mail notices giving the time and
22 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
23 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
24 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict

1 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
2
3 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
4
5 secure their own appraisal), evaluate proportionality of the proposed assessments, and
6
7 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
8
9 for anybody to get an appraisal”).

10
11 81. The City’s Notice of Assessment was sent on December 30, 2019. And the
12
13 Final Special Benefit Study has only been available for public review since January 7, 2020.
14
15 Due to this short time frame, SHG HOTEL SPE requested a prehearing conference and
16
17 scheduling order that would preserve and protect SHG HOTEL SPE’s right to analyze and
18
19 respond to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
20
21 accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the
22
23 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
24
25 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
26
27 the Examiner’s Recommendation: I.B.

28 29 **VII. Relief Requested**

30
31 SHG HOTEL SPE respectfully requests that the City Council:

- 32
33 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
34
35 and
36
37 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
38
39 assessment dated December 30, 2019; or
40
41 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
42
43 proposed final assessment to \$0 (zero), or such amount as Taxpayer
44
45 establishes at the hearing in this matter; or
46
47

- 1 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
2 and reduce Taxpayer's assessment using recognized appraisal techniques
3 consistent with USPAP and:
4
5 i. Excluding any property value increase attributable to viaduct removal
6 and other planned WSDOT Improvements;
7
8 ii. Excluding any value attributable to personal property;
9
10 iii. Taking into account the effects of the COVID-19 pandemic on the
11 value of Taxpayer's property and other relevant developments since
12 October 2019;
13
14 iv. Accounting for and excluding (1) any special benefits from existing
15 or planned improvements that already provide similar benefits to
16 Taxpayer's property, and (2) any special detriments from construction
17 and other anticipated LID-related disamenities;
18
19 v. Accounting for and including only those actual benefits anticipated to
20 accrue to Taxpayer's property based on its location relative to Pier 58,
21 Overlook Walk, and the Promenade, and specific elements of the LID
22 Improvements;
23
24 vi. Discounting anticipated special benefits to present value, based on
25 reliable estimates regarding when special benefits will start accruing
26 following completion of the LID Improvements; and
27
28 vii. Accounting for such other issues specific to Taxpayer's property
29 relevant to calculation of such assessment; and
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44

45 2. Grant such further relief as the City Council deems just and proper.
46
47

23 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

24
25 SHG HOTEL SPE LLC owns the property that is subject to the proposed final
26
27 assessment described in Section IV.
28

29
30 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
31
32 include additional arguments relevant to the revised Final Recommendations of the Hearing
33 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
34
35 objection to the assessment, which was based on the Final Study. Taxpayer further timely
36
37 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
38
39 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
40
41 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
42
43 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
44
45 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
46
47

1 as authorized by the Hearing Examiner, including without limitation all records pertaining to
2
3 the November 2020 through February 2021 remand hearing ordered by Council.
4

5 **IV. Amended Arguments on Appeal**

6 SHG HOTEL SPE LLC supplements its appeal of the Hearing Examiner's
7
8 recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local
9
10 Improvement District No. 6751 proposed final assessment dated December 30, 2019 against
11
12 the following property:
13
14

15 King County Parcel No. 6094670030
16 Site Address: 1321 1ST AVE, Seattle, Washington
17 Proposed Final LID Assessment for Parcel: \$1,676,214.52
18

19 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
20
21 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
22
23 amended appeal.
24

25 **A. The Council Should Eliminate Personal Property Assessments for this**
26 **Property**

27 Taxpayer's September 22, 2020 appeal challenged the City's appraiser's and
28
29 Examiner's recommendation that the City impose special assessments against the value of
30
31 hotel personal property (furniture, fixtures and equipment), both because personal property
32
33 is not the type of property that receives a special benefit, and also because the appraiser was
34
35 not recommending personal property assessments against other types of property - retail,
36
37 office, residential. On remand, the appraiser recommended, and the Examiner has agreed,
38
39 that the remanded hotels should not be assessed on the value of their personal property. *See*
40
41 Declaration of Robert Macaulay at ¶12 (December 4, 2020) (reducing assessments to
42
43 account for the value of furniture, fixtures and equipment); Hearing Examiner's Final
44
45 Recommendation at p. 125 (filed with clerk on Feb. 1, 2021). Taxpayer agrees with that
46
47

1 recommended change. However, because Taxpayer's assessment still includes personal
2 property, it leaves Taxpayer's assessment even more disproportionate. It is unfair to assess
3 a few hotels against their personal property while not assessing personal property of other
4 hotels or property types. The value of personal property improperly assessed and the
5 amount by which Taxpayer's assessment should be reduced to eliminate that portion of the
6 assessment is set forth in Exhibit A. *See* Letter of John Gordon, February 12, 2021.

11

12
13 **B. The Anticipated Special Benefits to Taxpayer's Property should be**
14 **Discounted to Present Value and Assessments Adjusted as Appropriate**
15

16 On remand, the City's appraiser acknowledged that special benefits to parcels can be
17 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
18 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
19 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
20 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
21 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
22 accepted that recommendation. The City's appraiser further acknowledged that benefit
23 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
24 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
25 (benefits to theatre "would be a long enough time out to where it wouldn't measurably affect
26 value."). Nevertheless, the appraiser refused to more generally discount his benefit
27 calculations to present value because the general benefits are not anticipated from the LID
28 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
29 perhaps not until 2029. The appraiser's and Examiner's recommendation to reduce the
30 theatre's assessment to zero is reasonable. His refusal to make other discounts to his special
31 benefit calculation, and related assessments, to account for the delay between the assessment

1 and realization of any special benefits to Taxpayer's property is unreasonable, contrary to
2 standard appraisal practice, and renders the other proposed Waterfront LID special
3 assessments, and the Examiner's Recommendations, arbitrary and capricious and based on
4 "fundamentally wrong methods."
5
6

7
8 All special benefit taxes assessed by a municipality must be based on "actual,
9 physical and material [special benefits that are] not merely speculative or conjectural."
10
11 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
12

13
14 Additionally, the assessments may not materially exceed the actual special benefit conferred
15 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
16 to meet any of these legal requirements is fatal to the assessment. Taxpayer's September 22,
17 2020 appeal challenged the City appraiser's valuation because, among other flaws, it did not
18 discount benefits the City estimated would accrue to the properties from improvements to be
19 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
20 appraiser's inconsistent approach, selectively applying discounting to one (that we know of)
21 property while treating all or most others (including Taxpayer's) differently, and
22 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
23 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
24 for some properties because the benefits are too distant, while assessing other properties as
25 though distant benefits have already been secured. As Taxpayer identified in its September
26 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
27 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
28 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
29 reject the improper calculation of the benefit or remand and require the appraiser to discount
30 the benefits to net present value.

1 **C. In Light of Covid’s Continuing Impact on Taxpayer and other**
2 **Downtown Property Owners and other Material Changes Since October**
3 **2019, the LID Should be Cancelled, or at Least Assessments**
4 **Recalculated, to take Into Account Property Value Reductions**

5 In Taxpayer’s September 22, 2020 appeal, Taxpayer requested the Council “[t]ak[e]
6 into account the effects of the COVID-19 pandemic on the value of Taxpayer’s property and
7 other relevant developments since October 2019.” When Washington’s first COVID
8 restrictions were imposed in March and April 2020, there was an assumption that they
9 would be short-lived. A year later, the Puget Sound area is finally again moving to “Phase
10 II.” Many downtown hotels are closed, and our hotels are not anticipated to fully recover
11 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
12 gotten much worse. The City has already imposed higher minimum wages and taxes on
13 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
14 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
15 hypothesized in the City’s appraisal to exist as of October 2019, collapsed, and is several
16 years from completion, as a best case. In current circumstances, a downtown tax to fund
17 new, non-essential park improvements against financially strapped taxpayers, and likely
18 passed through to financially strapped tenants and customers would be unfair to taxpayers
19 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
20 rethinks its budget priorities for the next few years, and its potentially funding sources,
21 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
22 property owners) have a chance to recover, and that any assessment take into account the
23 changed circumstances since this appeal process started on February 4, 2020 to avoid
24 unnecessarily and perhaps permanently killing downtown properties and businesses in the
25 name of bettering them.

1 **V. Relief Requested**

2 Particularly in light of the Committee's decision not to take further comment from
3 appellants, Taxpayer respectfully request that each Committee member carefully review the
4 full record transmitted to Council before voting on Taxpayer's appeal.
5
6

7 SHG HOTEL SPE LLC respectfully reiterates its request from the September 22,
8 2020 appeal that the City Council:
9

- 10 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection;
11 and
12
13 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
14 assessment dated December 30, 2019; or
15
16 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
17 proposed final assessment to \$0 (zero), or such amount as Taxpayer
18 establishes at the hearing in this matter; or
19
20 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
21 and reduce Taxpayer's assessment using recognized appraisal techniques
22 consistent with USPAP and:
23
24 i. Excluding any property value increase attributable to viaduct removal
25 and other planned WSDOT Improvements;
26
27 ii. Excluding any value attributable to personal property;
28
29 iii. Taking into account the effects of the COVID-19 pandemic on the
30 value of Taxpayer's property and other relevant developments since
31 October 2019;
32
33 iv. Accounting for and excluding (1) any special benefits from existing
34 or planned improvements that already provide similar benefits to

P.O. Box 334
Bellevue, Washington 98009

Re: Four Seasons Hotel / KM Job A19-1335

Dear Mr. Vik:

In February 2020, at your request, we prepared an appraisal of the Four Seasons Hotel, a 147-room luxury hotel located at 99 Union Street in Seattle, King County, Washington. One element of that appraisal was the allocation of value to personal property, defined as furnishings and freestanding equipment.

As of January 1, 2020, the aggregate cost new of the hotel's personal property was about \$11,160,000, of which \$2,000,000 was spent during 2019 and \$9,160,000 was spent during prior years. We deduct depreciation of 10% (\$200,000) for the recent acquisitions and 50% (\$4,580,000) for the balance. The total deduction for depreciation is \$4,780,000. In our opinion, the contributory value of the personal property of the Four Seasons Hotel, as of January 1, 2020, was \$6,380,000.

In valuing the personal property of this hotel, we use the same methodology as was applied in our appraisals of 11 other hotels in support of their LID assessment appeals. Note that we estimated depreciation at 10% for the 2 hotels that recently opened and at 50% for the 9 other hotels.

In the analysis by the city appraiser, the special benefit ratio for the Four Seasons Hotel is estimated at 3.0%. The LID levy ratio for all affected properties is 39.2%. If the personal property of the hotel is excluded from the assessment, the LID levy for that property will be reduced by \$75,029.

Respectfully submitted,

John D. Gordon, MAI, AI-GRS
Certified General Real Estate Appraiser

Hearing Examiner File No. CWF-0435

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON SOUND VISTA
PROPERTIES LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
6094680050

32
33
34 SOUND VISTA PROPERTIES LLC (“Sound Vista”) files this appeal pursuant to
35 RCW 35.44.070, Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the
36 notice of the Seattle Office of the City Clerk dated December 30, 2019, and the Hearing
37 Examiner’s Findings and Recommendation issued September 8, 2020 (“Examiner’s
38 Recommendation”).

27

28 **III. Statement of Taxpayer's Interest**

29
30 Sound Vista owns the property that is subject to the proposed final assessment
31 described in Section IV. The property is a condo unit located in the same building as the
32 Four Seasons Hotel, known as the 99 Union Street Private Residences. The basis of the
33 proposed assessment is a Final Special Benefit/Proportionate Assessment Study for
34 Waterfront Seattle Local Improvement District ("Final Study"), dated October 1, 2019 and
35 prepared by Robert Macaulay with ABS Valuation (the City's appraiser). The Final Study
36 proposes assessments that are purportedly limited to paying for the LID-funded
37 components—namely, the Promenade, Overlook Walk, Pioneer Square Street
38 Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape Improvements,
39
40
41
42
43
44
45
46
47

1 and Pier 58 (together, the “LID Improvements”). The Final Study purports to exclude
2 charges for other improvement projects in the Central Waterfront, and specifically those
3
4 WSDOT had already agreed to pay for and construct: viaduct demolition, the new
5
6 Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99 Tunnel,
7
8 the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned fronting
9
10 piers between Pike and Madison (together, the “WSDOT Improvements”). But because
11
12 construction was not complete on the LID Improvements or the WSDOT Improvements at
13
14 the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019 “Before” and
15
16 “After” valuations are both based on hypothetical conditions rather than actual facts. On
17
18 February 4, 2020, Taxpayer timely filed an objection to the assessment, which was based on
19
20 the Final Study.
21

22 **IV. Matter Under Appeal**

23
24 Sound Vista appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
25
26 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
27
28 final assessment dated December 30, 2019 against the following property:
29

30
31 King County Parcel No. 6094680050
32 Site Address: 1321 1st Ave, Seattle, Washington
33 Proposed Final LID Assessment for Parcel: \$122,411.85
34

35 See Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
36
37 the evidence and arguments raised before the Hearing Examiner into this appeal. In
38
39 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
40
41 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
42
43
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 106, Sections II.6, II.7, II.12, II.14, II.18, II.19, II.20, II.21, II.22, II.23, II.24,
8 II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3, IV.B.4,
9 IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.11,
11 IV.C.12, IV.C.14, IV.C.15, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38

39 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
40 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
41 Public Works committee secure and provide appellants with such a record, so that the appeals can
42 then be supplemented with that additional information, so as to make the Committee's consideration
43 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
44 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
45 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
46 retained by Perkins Coie are part of this case file.
47

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$312,416.99 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” *See* Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
2 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
3 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
4 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
5 Final Study fails to meet basic standards for admissibility and must be remanded.
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6
7 **V. Standard of Review**
8

9 “When considering the assessment roll, the city council sits ‘as a board of
10 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
11 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
12 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
13 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
14
15

16 The proposed assessments are presumed correct, “unless overcome by clear, cogent
17 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
18 than the heightened presumption of correctness on judicial appeal because “applying these
19 elevated standards at the municipal hearing would afford unwarranted deference to a report
20 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
21 presumption is not evidence and its efficacy is lost when the other party adduces credible
22 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
23 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
24 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
25 presented credible evidence showing that the City’s proposed assessment is arbitrary,
26 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
27 to the City to prove the assessments are actual, measurable, special, non-speculative and
28 proportionate. The City failed that burden.
29
30
31
32
33
34

39
40
41
42
43
44
45
46
47

1 **VI. Grounds for Appeal**

2 Sound Vista appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
12 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
13 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
14 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
15 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
16 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
17 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
18 provided expert opinion showing that improvements actually diminished value of the
19 property). In fact, no independent evidence is required at all if, for example, objectors show
20 that the assessment was grounded on a fundamentally wrong basis due to an error in the
21 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
22 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
23 a property owner could simply point out that the square footage assumed in the City's
24 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
25 Examiner's Recommendation: Sections II.12, II.14, IV.A, IV.B.11(a), IV.C.2, IV.C.8, and
26 IV.C.11.
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

2 2. RCW 35.43.040 provides cities and towns authority for ordering local
3
4 improvements and for levying and collecting special assessments “on property specially
5 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed
6
7 upon all the property in accordance with the special benefits conferred thereon.” RCW
8
9 35.44.010.
10

11 3. No analysis of general benefits. Special assessments have been “held valid
12
13 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
14
15 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
16
17 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
18
19 they are for the construction of local improvements that are appurtenant to specific land and
20
21 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
22

23 4. Sound Vista’s property is not specially benefited by the LID Improvements.
24
25 The primary purpose and effect of the LID Improvements are to benefit “members of the
26
27 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
28
29 library is for the benefit of the members of the whole community individually and
30
31 collectively who may be served by it”). Mr. Macaulay’s own chapter of the LID Manual
32
33 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
34
35 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
36
37 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
38
39
40
41

42
43 ² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 that if an appraiser “identifies both general and special benefits, these benefits should be
2 clearly distinguished and explained, and only special benefits should be included in the
3 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
4
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6
7 183:4. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
8
9 including those arising from construction necessary to meet basic design standards. *See*
10
11 Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
12
13 construction costs related to meeting design standards which may be general benefits as
14
15 distinct from construction costs emanating from requirements of the LID project”). To the
16
17 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
18
19 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
20
21 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
22
23 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.
24
25

26 5. LID Improvements not necessary. Unlike typical LID projects, the
27
28 Waterfront LID improvements are largely unnecessary to the functionality of any particular
29
30 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
31
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33
34 held invalid where owners would have benefitted equally from increase of only 9 feet);
35
36 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
37
38 intersection for new water main for hydrant held invalid because land was already afforded
39
40 functional hydrant at nearby street). Here, Taxpayer provided evidence the Improvements
41
42 are not necessary to the condo, which already has sufficient access to the waterfront through
43
44 stairs directly adjacent to the property, and easy access to other amenities. *See* 3/12/2020
45
46 (G. Vik) Hrg. Tr. at 125:9-129:21. And for residential properties, the assumption that an
47

1 increase in tourism will cause lifts in property value is both anecdotally and empirically
2 unsupported. The fact that there is no case law differentiating between binary improvements
3 and parks does not change the law prohibiting assessments on properties already adequately
4 served by existing amenities. See Examiner's Recommendation at IV.C.3 (reasoning that
5 "no case law is provided to support the differentiation between a hardscape benefit and the
6 more ephemeral benefits of park"). Nor does the Examiner's reasoning excuse the City's
7 failure to account for existing amenities as part of the special benefit calculation. As Dr.
8 Crompton testified, existing view amenities may in fact diminish the incremental effect of
9 new park improvements on the value of properties, much like turning on a weak light in an
10 already brightly illuminated room. See Hrg. Exhibit 94 (Crompton's Report) at 12-13.

20
21 6. To the extent benefits can be considered "special" as opposed to general, they
22 are nominal or nonexistent for many properties even in the Central Waterfront, which
23 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
24 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
25 change due to expansion of sewer service *near* owners' parcel which were already
26 connected). Here, the primary reason one would choose a condo like Sound Vista's is not
27 proximity to the waterfront, instead, as a high end residence it is the amenities offered
28 because it is linked to a hotel. See 3/12/2020 (P. Shorett) Hrg. Tr. at 19:2-11. Even if the
29 City could assess for a view change (and it has promised not to assess for viaduct removal),
30 the fair market value of Sound Vista's property has not changed because the LID
31 Improvements have not improved the property's waterfront view or access to the waterfront,
32 nor will they when the City anticipates completion in 2024. For these reasons, Taxpayer
33 appeals the following portions of the Examiner's Recommendation: Sections IV.C.3,
34 IV.B.9, and IV.C.3.

1 7. No analysis of special detriments. The Final Study fails to properly account
2 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
3 owners for removal and cleanup of underground storage tanks discovered during the
4 improvement project). Although Mr. Macaulay claims he analyzed impacts on the City's
5 planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation
6 of how lost parking might be a detriment, and no property-specific parking analysis in any
7 of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg.
8 Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
9

10 8. Likewise, there was no analysis of the risks associated with disamenities such
11 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
12 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
13 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
14 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
15 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
16 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
17 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
18 the maintenance agreement. *Id.* at 13:4-14:2.
19

20 9. There was also no consideration of negative impacts from another four-plus
21 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
22 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
23 law allowing him to dismiss these actual, non-speculative impacts. Because future special
24
25
26
27
28
29
30
31
32
33
34

35
36
37
38
39
40
41
42
43
44
45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 benefits calculations are inherently speculative, Washington’s eminent domain statute
2 specifically allows condemnees to postpone special benefits assessments until improvements
3 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
4

5
6 Moreover, the studies that Mr. Macualay relied on demonstrate that construction disamenity
7 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
8 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
9 Greenway, the Greenway district “significantly” lagged in value). For these reasons,
10 Taxpayer appeals the following portions of the Examiner’s Recommendation: Sections
11 II.25, IV.B.8, and IV.B.9.
12

13
14 10. Special benefit estimate is speculative. When calculating a special benefit,
15 “[f]air market value cannot include a speculative value.” *Bellevue Plaza, Inc.*, 121 Wn.2d at
16 411. “When an appraiser uses a factor ‘beyond the knowledge of reasonable certainty’, it
17 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
18 P.2d 1078 (1958)).
19

20
21 11. Assuming without conceding that one day, the City’s planned LID
22 Improvements might increase the value of neighboring properties to some extent, that
23 potential benefit is many years away and speculative. While appraisers tolerate some degree
24 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
25 far too speculative to satisfy industry practices and standards. *See e.g.*, 3/12/2020 (P.
26 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
27 the level of precision implied in the Final Study due to the size of the LID and use of
28 hypotheticals).
29

30
31 12. Although LIDs are sometimes finalized prior to completion of improvements,
32 this is typically just six month or a year prior, and the assessments are otherwise supported
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
2 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
3 will not be realized for four or five years. In the meantime, there is permitting risk,
4 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
5 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
6 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
7 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
8 there is inherent uncertainty in valuing the future delivery of projects because "we can't read
9 the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: "I just don't know what the
10 market value would be as of the date the project would be finally constructed" because
11 "[t]here could be a lot of elements in the market that did occur between now and then that
12 impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
13 his estimates will be higher or lower than comparable sales in 2024 because "markets tend to
14 fluctuate over time" and "I can't predict the future").

15
16
17
18
19
20
21
22
23
24
25
26
27
28
29 13. The record is clear that while no one can know what "special benefit" might
30 accrue to these properties in four years (if any), we do know that there are no actual benefits
31 now. The LID improvements provide no immediate special benefit to property owners
32 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
33 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
34 sewer system for future users).

35
36
37
38
39
40
41 14. Further, there are no "plans and specifications" on file with the Clerk's Office
42 for the LID Improvements, and it is unlawful to move to final assessments without such
43 "plans and specifications." Ordinance 125760, Section 3; *Local and Road Improvement*
44 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
45
46
47

1 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
2 dollars on projects still early in the design process. *See* Washington Attorney General
3 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
4 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
5 of programs and included “only so much of the overall costs” that took place within and
6 benefitted the assessed properties).
7
8
9
10
11

12 15. The COVID-19 crisis highlights how fundamentally speculative and unfair it
13 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
14 anticipated to be delivered five years later. Even before COVID, it was speculative to
15 assume that market highs experienced in October 2019¹ would be sustained through 2024,
16 after an already extraordinarily long expansion period. *See*, 3/3/2020 (A. Gibbons) Hrg. Tr.
17 at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my
18 analysis in October 2019, who would have thought that this COVID issue would happen?”
19 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was
20 that the market was going to continue to go up”; they are already irrelevant. *See* Gibbons
21 Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although COVID does not change actual
22 values as of October 2019 (*see* Examiner’s Recommendation at 109), the pandemic has
23 impacted *current* values and rendered the hypothetical October 2019 Final Study valuations
24 outdated.

38 16. As another example of how future events could affect the accuracy and
39 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
40 Examiner re-open the record to allow the City to explain whether the assessments against
41 property owners within the LID are, in fact, being used by the City to fund the emergency
42
43
44
45
46
47

1 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
2 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
3 would be improperly imposing costs on property owners within the LID for improvements
4 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
5 habitat and City infrastructure—this does not provide any special benefit to LID property
6 owners.
7
8
9
10
11

12 17. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
19 potential delays and project changes inherent in those processes, that call into question the
20 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110

1 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
2 Decl., dated 4/15/2020).
3

4
5 18. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
6 he could not point to a single one where the assessment roll was finalized five years in
7 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
8 he has never recommended final special assessments based on designs less than 30 percent
9 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
10 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
11 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
12 at 66:17-25. He performed no independent due diligence to determine the reliability of the
13 City’s estimates for completion of the LID Improvements, or to ensure that proposed
14 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
15 agreed that if any of his assumptions are incorrect, his opinion of market value would need
16 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
17 68:11-18.

23
24
25
26
27
28
29

30 19. The City has cited no authority—and Taxpayer is aware of none—that
31 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
32 assess taxes for “actual” special benefits that will not accrue for another five years (if all
33 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
34 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
35 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
36 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
37 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
38 IV.C.14, and IV.C.18.
39
40
41
42
43
44
45
46
47

1 20. Failure to discount special benefit estimates to account for risks and present
2 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
3 have accounted for risks associated with delivery of the improvements (including permitting
4 risk, construction risk, general economic risk) and any special damages associated with
5 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
6 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
7 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
8 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
9 the impact of future conditions [through] discounted cash flow analysis.").

10 21. Mr. Macaulay acknowledged that appraisers can discount the value of a
11 future condition not in place at the date of valuation and can discount for the time value of
12 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
13 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
14 Discounting would also have been consistent with his approach for analyzing special
15 benefits to vacant land. He testified that the difference between similarly situated vacant
16 sites slated for development and already developed sites was that the labor, capital and risks
17 associated with development had not yet been borne for those vacant sites. Therefore, the
18 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
19 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
20 fully permitted, has not completed environmental review, and has not reached full design is
21 presently worth significantly less.

22 22. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
23 present value, an appraiser would consider discount rates for land development to account
24 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
25

1 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
2 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
3 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
4

5
6 23. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
7 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
8 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
9 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
10 ignoring momentarily all of the other methodological and other flaws discussed here and in
11 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
12 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
13 exceeds special benefits when reduced to present value. Further, to the extent the City is
14 arguing that because they are permitted to assess 100% of the special benefit, the special
15 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
16 is again wrong. After applying proper discounting, the City's proposed special benefit
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18 100% of the total estimated special benefit.
19
20

21 24. But even the assumption that the LID improvements would deliver benefits
22 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
23 on. Rather, those studies demonstrate that a discount period of five years is conservative.
24 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
25 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
26 indicates that during the construction period, the Greenway district "significantly" lagged in
27 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
28 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
29
30
31
32
33
34
35

41
42
43
44
45
46
47

1 30-31 (discussing New York City High Line and San Francisco Embarcadero
2 improvements). Given the lengthy delay, any prediction of future special benefits is
3 speculative, especially during the construction phase where values are likely to decline.
4
5 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
6
7 Improvements take a similarly long period of time after they are complete to start producing
8
9 tangible property value benefits, each additional year of delay results in further discount to
10
11 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
12
13 A.
14
15

16 25. Applying the same discounting methods described above and in Mr. Gibbons
17 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
18
19 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
20
21 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
22
23 100% assessment should be no more than \$29,429.68. Anything more would permit the
24
25 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
26
27 place and providing benefit, and ignore the risks, construction disamenity, and time value of
28
29 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
30
31 would counsel that the assessment should be only 39.2% of that assessment cap, or
32
33 \$11,536.43.
34
35

36 Attachment B includes two Excel spreadsheets applying these discounting methods
37
38 to Taxpayer's assessment. It is undisputed that special benefits will not actually accrue until
39
40 the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
41
42 demonstrates that discounting the City's hypothetical October 2019 special benefits to
43
44 present value would reduce Taxpayer's assessment to \$41,998, exclusive of any other flaws
45
46 in the City's proposed assessment. The second spreadsheet shows even more drastic
47

1 reductions after taking into account: discounting to present value for 5 years (*i.e.*, from 2024
2 when the City anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029
3 to account for the time it takes for the improvements to capture property value). After such
4 reductions, Taxpayer's assessment would be just \$41,998 (for the 5-year discount) or
5 \$11,540 (for the 10-year discount). Neither of these spreadsheets address other issues raised
6 by Taxpayer's appeal, but are intended to help demonstrate how unfair and inflated the
7 City's proposed hypothetical assessment is. The Hearing Examiner's Recommendation
8 simply dismisses Taxpayer's discounting argument without legal or factual analysis; that
9 failure is error.
10
11
12
13
14
15
16
17
18

19 **Appraisal and Assessment Calculation Methods Are Flawed**

20 26. The "general rule is that each lot, piece, or parcel of land should be assessed
21 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
22 Wn.2d at 97.
23
24
25

26 27. It is proper to sustain a challenge to an assessment, even without the appraisal
27 testimony from the owner, where the objector's expert establishes that the assessment was
28 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
29 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
30
31
32
33

34 28. The City's appraiser purports to utilize the income method of valuation but
35 relied on inaccurate revenue and market data, as discussed further below.
36
37
38

39 29. The City's appraiser purports to utilize the comparable sales method of
40 valuation, but no City witness attempted "to characterize any one, or all of them, as
41 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
42 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
43 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
44
45
46
47

1 characterize any one, or all of them, as comparable to any particular property within the LID”).
2
3 And no City witness could explain how specific adjustments were made to these sales to
4
5 account for value increases due to the hypothesized Before and After Improvements. For this
6
7 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
8

9 30. Special assessment improperly includes value lift from the Before
10 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
11
12 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
13
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15
16 Macaulay did not calculate the actual market value of LID properties in October 2019, and
17
18 did not separately analyze the hypothetical increase to property values attributable to
19
20 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
21
22 current value and then separately calculate a hypothetical “With WSDOT” Before value);
23
24 *see also* Hamel Decl., ¶¶ 11, 12 (explaining that for condos, the “first task” was to determine
25
26 current values but not explaining how they included the value of the hypothetical “WITH
27
28 WSDOT” Before Improvements); Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020);
29
30 *see also* Gibbons 1/30/2020 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018
31
32 Letter (attached to Appeal Petition) at 3-4; Shorett Appraisal Review (attached to Appeal
33
34 Petition) at 2-14. Without any documented basis or support, Mr. Macaulay simply “ma[de]
35
36 a judgment a call” on what occupancy and rates would have been for the commercial
37
38 properties assuming all of the WSDOT Improvements are completed as of 2019. Macaulay
39
40 Depo. at 129:19-130:11. This outright omission precludes any independent evaluation of
41
42 the true market “Before” values. *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet
43
44 professional appraisal standards; if an appraiser uses current sales data to infer values, then
45
46 the appraiser must explain how he analyzed that data and other information to come up with
47

1 the hypothetical value. 3/3/2020 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not
2 just removal of the viaduct, but also other road, pedestrian and landscaping improvements
3
4 WSDOT had already committed to make.
5

6
7 31. However, because Mr. Macaulay testified that he did include some WSDOT-
8 related value-lift in the “Before” values, it follows that part of the special assessment
9 improperly is based on value attributable to the WSDOT Improvements. As shown by
10 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
11 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
12 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
13 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
14 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
15 to properly exclude the value of Before Improvements from the assessments. For these
16 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
17
18 Sections II.19, II.29, and IV.B.11(a)(ii)
19
20
21
22
23
24
25
26
27

28 32. Special benefits were assigned rather than measured. ABS applied a uniform
29 special benefit percentage to every unit within a condominium building, notwithstanding
30 individual differences among the units. For example, he relied solely on King County
31 Assessor data for information regarding each condo, but for Taxpayer’s property, there was
32 no information about views.⁶ Incredulously, at the same time he insisted that the After value
33
34
35
36
37
38
39

40 ⁶ There was no information about views from (1521 2nd Avenue Units 3800 and 3802, CWF-
41 0430 and CWF-0431) on King County Assessor’s site even though there are significant views from
42 these properties. *See*
43 <https://blue.kingcounty.com/Assessor/eRealProperty/Detail.aspx?ParcelNbr=2538831480>;
44 <https://blue.kingcounty.com/Assessor/eRealProperty/Detail.aspx?ParcelNbr=2538831480>. This is
45 problematic given that other objectors’ cross-examinations—in particular regarding the Waterfront
46 Landing condos—effectively demonstrated that ABS Valuation made incorrect assumptions about
47 views for a significant number of properties. *See, e.g.,* 6/25/2020 Hrg. Tr. at 87:18-88:1; 89:7-91:23;

1 for each condo was calculated “parcel-by-parcel” and that the special benefit percentage was
2 simply a reflection of the difference between Before and After values. In fact, there is no
3 real way to check this work or verify his methods because the analysis does not exist either
4 within his report or in the backup data. However, the simple fact that every single condo
5 within a building received the exact same special benefit percentage increase is evidence
6 enough that Mr. Macaulay did not make an individual parcel-by-parcel special benefit
7 analysis. *See* Gibbons Decl. ISO Closing Stmt., ¶ 6 (dated 7/7/2020).
8
9
10
11
12
13

14 33. For these reasons, Taxpayer appeals the following portions of the Examiner’s
15 Recommendation: Sections II.19, IV.B.11(a)(iii), and IV.C.15.
16
17

18 34. Special benefit falls within margin of error. The Final Special Benefit Study
19 applies an estimated value enhancement of less than 4%, which is generally within the
20 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
21 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
22 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
23 of one another, this difference is considered reasonable as it falls within the standard margin
24 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
25 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay’s micro-special benefit
26 percentages fall far below that 5% margin, “there is no way of authenticating” such
27 incremental changes because “[m]arket forces completely obliterate any tiny little noise
28 factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
29 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25.
30
31
32
33
34
35
36
37
38
39
40
41
42

43
44 95:2-10; 97:2-99:14; 100:24-101:13 (for the Waterfront Landing, ABS Valuation did not discount
45 for view blockages in the Before condition as a result of the Pine Street Connector and instead
46 simply assigned per square foot values in \$25 increments based on incorrect assumptions about
47 corner units and units on higher floors).

1 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
2
3 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
4
5 appraiser to discern the micro-value differences between hypothetical conditions that are so
6
7 similar (the WSDOT improvements compared to the LID improvements) “verges on being
8
9 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.

10
11 35. Even if it were possible to accurately tease out such a miniscule hypothetical
12
13 value change due to improvements coming five years later, experts testified that there is no
14
15 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
16
17 what he felt the changes (hypothetically) would be. See 3/12/2020 (J. Gordon) Hrg. Tr. at
18
19 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at
20
21 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
22
23 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
24
25 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

26
27 36. No analysis of value increase attributable to individual components of the
28
29 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
30
31 percentage difference between hypothetical Before and After conditions. Throughout his
32
33 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
34
35 descriptions in the Addenda even though he testified that he relied on these to calculate
36
37 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
38
39 someone might be able to determine how he attributed value to After conditions described in
40
41 the Addenda, he answered that that was “not the scope of the assignment” because he was
42
43 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
44
45 that the six components were not actually a continuous project, that he was viewing them
46
47 together because the City asked him to, and that if he were to view them independently,

1 there was a low probability that properties in the north would specially benefit from
2 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

3
4 37. Not only did he fail to analyze benefits from each of these non-contiguous
5 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
6
7 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
8 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
9
10 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
11 objectives that guided regulators' assessment of architectural plans for buildings along a
12 "signature street" were so vague that they amounted to ad hoc review based on the
13 regulators' subjective impressions and feelings).⁷ It became clear through his testimony that
14 even though he used the renderings as "visual aid[s] in appraising the property in the before
15 and after" to "visually see what the differences would be," he could not explain what
16 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
17 when shown a rendering of a two-lane road going down to one-lane in the After condition
18 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
19 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
20 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
21 could explain the depiction of the same trees in the After condition nearly twice as tall as in
22

31
32
33
34
35
36
37
38
39

40
41 ⁷ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
2
3 of the Examiner’s Recommendation: II.27 and IV.B.4.

4
5 38. Special assessment is not supported by comparable studies, data or reports.
6
7 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
8
9 that the LID Improvements will lead to meaningfully increased real estate values for
10
11 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
12
13 comparable sales or information from the “over twenty-five studies and reports” to arrive at
14
15 very precise special benefit increases for the residential condominiums, including
16
17 Taxpayer’s property. For example, although Mr. Macaulay stated that no single report or
18
19 study was directly on point due to the unique nature of the LID Improvements (*see, e.g.,*
20
21 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments
22
23 in his parcel-by-parcel analysis other than to say that the studies generally provided “some
24
25 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
26
27 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
28
29 similarities and differences between these improvements and the comparable parks he
30
31 looked at).

32
33 39. Ms. Hamel also explained that after considering the “over 25 studies and
34
35 reports” as background, ABS concluded that there was “no consensus among the many
36
37 reports reviewed as to a set block or foot radius that should be utilized.” Hamel Decl. at ¶
38
39 33. So, they “took that information and calibrated it to the LID improvements and
40
41 conditions in Seattle[.]” *Id.* However, there is no analysis and no documentation on how
42
43 general principles articulated in the studies translated into specific property value increases.
44
45 ABS does not explain what the studies indicate should be an outer limit on impacts to
46
47

1 property value, and do not explain *how* the different streetscape and “park-like” elements
2 were treated—only that they were treated differently.
3

4 40. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
5 assignment of incremental increase of 0.5% to 4% to property values within the LID.
6
7 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
8 research misinterprets his work in critical ways, including because the LID Improvements
9 manifest the characteristics of a parkway (not a park), and his research indicates that most of
10 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
11 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
12 related value increases are in fact smaller; that estimated increases are “best guesses” rather
13 than predictions of property value increases in a particular city; and that percentages do not
14 account for diminishing returns after taking into account water views, which would be the
15 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
16 topography grants most properties in downtown a water view.
17

18 41. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
19 that this was just one source of information that was not entirely relevant because, among
20 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
21 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
22 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
23 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
24 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
25 Crompton concluded that 500 feet via road from “park” improvements is just one or two
26 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
27 significantly beyond that which the park study indicated (even if it was legitimate to use the
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
2 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
3 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
4
5 Taxpayer’s property is not within 500 road network feet from the “park” improvements. *See*
6
7 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
8
9

10 42. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
11 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
12 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
13 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
14 materials, it was clearly an important—if not *the* most important—source of information for
15 estimating special benefits (especially with respect to the condos).⁸ No City witness
16 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
17 parcel-by-parcel analysis.
18
19

20 43. Ms. Hamel’s testimony that Crompton’s report is “one of the first studies to
21 look at various correlations between parks and real estate values” and that “his study was
22 cited in many of the research studies and economic reports we reviewed” suggests that
23 without this study, ABS would have little to no basis for the special benefit estimates for
24 condos. Hamel Decl. at ¶ 37 (dated 6/26/2020).
25
26

27 44. The destination parks discussed in the Final Special Benefit Study do not
28 provide reliable, comparable, and valid support for the calculation of special assessments
29
30
31
32
33
34
35
36

37
38
39
40
41
42 ⁸ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
2 critique of every case study cited concludes the changes to those “dwarf the difference
3 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
4 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
5 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
6 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
7 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
8 funded by a LID. And in virtually all of those cases, the park improvements dramatically
9 restored unimproved or blighted areas, and properties evaluated were within two or three
10 blocks of the park.

11
12
13
14
15
16
17
18
19
20
21 45. ABS’s claimed reliance on three economic studies to support property value
22 increase is also flawed. The HR&A study does not inform what value increases are
23 expected from the LID Improvements because it projects increases to tourism from *all* of the
24 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
25 dissimilar parks in other cities,⁹ making the methodological application to the LID
26 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
27 conclusion that there would be *no new net visitors* from downtown residents as a result of
28 the LID Improvements and could not explain how this impacted his condo analysis.

29
30
31
32
33
34
35
36
37 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
38 Property Values” primarily focused on whether the benefits accrue to the larger community
39
40
41

42
43 ⁹ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 rather than properties adjacent to the park. And the 2014 New York City Department of
2 Transportation study is not based on real estate transactions and market sales and fails to
3 substantiate any link between increased retail sales and property values. Moreover, this
4 study only looked at impact either directly abutting the streetscape improvement, or a couple
5 hundred feet for plaza-like improvements.
6
7
8
9

10 46. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
11 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
12 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
13 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
14 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
15 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
16 asked whether he considered that HR&A's estimated LID impact is six times greater than
17 TPL's assessment of Seattle's entire park system, his surmised that it was because the
18 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
19 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
20 assumptions to account for this difference, which may be partly explained by the fact that
21 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
22 approximately 3.44% of King County tourists visit Seattle primarily because of the city
23 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
24 waterfront improvements.
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 47. Although proximity to the improvements is a key factor in all of these
41 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
42 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
43 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
44
45
46
47

1 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
2 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
3
4 Improvements is approximate 20 acres and it is not a community park.¹⁰
5

6
7 48. There is no explanation in the Final Study or the supporting materials of how
8 the studies or comparable sales were used to derive values for Taxpayer's property. For
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
11
12

13
14 49. Failure to comply with USPAP. Taxpayer's assessment also rests on a
15 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
16 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
17 recognized) for developing the MAI standards for mass appraisals, testified that the Final
18 Study does not meet mass appraisal standards nor allow for independent assessment of the
19 accuracy of Mr. Macauley's conclusions.
20
21

22
23 50. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
24 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
25 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
26 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
27 testimony suggests that he incorrectly believed that the only difference between direct
28 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
29 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
30 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
31
32
33
34
35
36
37
38
39
40
41
42

43
44 ¹⁰ *See*
45 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
2
3 Gordon uses in doing his limited restricted report”).

4
5 51. But the difference is not only in reporting—mass appraisal techniques must
6
7 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
8
9 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
10
11 parcel approach:

12 The mass appraisal technique is an appraisal method used to evaluate
13 a group of properties that are subject to similar market forces as of a
14 certain date through the use of market data, statistical analysis and
15 testing. As a result, the mass appraisal technique does not require or
16 involve analysis of each individual property’s specific data.
17
18

19 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
20
21

22 52. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
23 universe of properties as a given date using standard methodology, employing common data,
24 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
25 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
26 model” is “a mathematical expression of how supply and demand factors interact in a
27 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
28 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
29 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
30
31
32
33
34
35
36
37

38 53. Regardless of client direction, Mr. Macaulay is required to comply with
39 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
40 economically feasible because it would have taken “an incredible amount of time and cost”
41 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
42
43
44
45
46
47

1 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
2 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
3

4
5 54. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
6 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
7 value, fails to calibrate the model structure to determine the contribution of the individual
8 characteristics affecting value, and does not review the mass appraisal results against actual
9 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
10 217:1;¹¹ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
11
12

13
14
15 55. Mr. Macaulay explained that factors like “aesthetic change in the area, the
16 proximity to the elements, the increase in market rent, market vacancy changes,
17 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
18 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
19 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
20 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
21 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
22 internal review process. *Id.* at 104:24-105:20. There is no documentation of the “internal
23
24
25
26
27
28
29
30
31
32
33

34
35 ¹¹ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36 relationship between characteristics that affect value, and to calibrate that model to specify how
37 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
38 21). The purpose is to rationally determine what characteristics will create value, and by how much.
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 review process” for the condos. 6/25/2020 Hrg. Tr. at 165:13-18. And because both the
2
3 Before and After values were hypothetical, it was not possible to identify matched pair sales
4
5 and no City witness explained how ABS Valuation made adjustments to “comparable” sales
6
7 in order to check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6
8
9 which requires him to explain his model structure.

10
11 56. For these reasons, Taxpayer appeals the following portions of the Examiner’s
12
13 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
14
15 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
16
17 and appeals the Examiner’s denial of that motion.

18
19 57. Finally, Taxpayer’s property is not appurtenant—or even in close
20
21 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
22
23 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
24
25 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
26
27 property is not even within 500 road network feet from the core park improvements. And,
28
29 as described above, the special assessment is overstated because the Final Study makes no
30
31 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
32
33 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
34
35 improvements were not in in place—and, in fact, much of the waterfront is a construction
36
37 zone following removal of the viaduct and now Pier 58 demolition. Under these
38
39 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
40
41 Mr. Macaulay at the very least should have discounted the special benefit estimates or
42
43 waited to perform the Study until the improvements were at least close to complete.
44
45
46
47

Erroneous Pre-Improvement Valuation

58. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's property.

59. The City's Final Study was used to compute the proposed final assessment of Sound Vista's property. The City's Study purportedly uses data from the King County Department of Assessments,¹² but the pre-improvement valuation information in the Final Study does not accurately reflect this data. Instead, the Final Study's "Market Value Without LID" values for properties differ from the Assessor's data drastically in some cases and less so in others with no apparent reason for this variation. This wide variation demonstrates that the Final Special Benefit Study is flawed because its pre-improvement valuation lacks proportionality and is not properly based on market data. The Final Special Benefit Study does not explain this difference—or any differences—between its pre-improvement valuation and its supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's Recommendation.

60. Thus, aside from multiple other reasons why computation of the special benefits was flawed (discussed further below), the assessment is based incorrectly on pre-improvement values that do not accurately reflect market data. For these reason, Taxpayer appeals the following portions of the Examiner's Recommendation: Section III at p. 106.

Erroneous Computation of Special Benefit

61. "Special benefit" is "the increase in fair market value attributable to the local improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property

¹² See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet (providing a "County Link" to the King County Department of Assessment's online "eReal Property" search tool).

1 may receive by reason of the improvement is not measured alone by the physical character
2 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
3 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
4 the particular tract or property benefited by the entire improvement, and is it assessed
5 proportionately with the other property included within the assessment district?” *Id.* 165–
6 66.
7

8
9
10
11
12 62. The proposed final assessment erroneously overstates the special benefit of
13 LID improvements in a number of ways.
14

15
16 63. The City’s Study computed the proposed final assessment by multiplying the
17 market value of the property without the LID improvements by 3.00%, which the City
18 contends represents the estimated special benefit of the LID improvements applicable to all
19 condo owners in Sound Vista’s building. However, there is no analysis and no
20 documentation on how general principles articulated in the studies translated into the
21 specific property value increase for Taxpayer’s property.
22
23
24
25
26
27

28 64. It also bears noting that any “internal review” of the special benefit estimates
29 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
30 error. Indeed, given all the same information, he seemed to suggest that it would be
31 perfectly reasonable for another experienced appraiser to come up with special benefit
32 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
33 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
34 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
35 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
36 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
37 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
38
39
40
41
42
43
44
45
46
47

1 reasonable and unreasonable variations within the appraisal field. *See* Examiner's
2
3 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
4
5 special because it is arbitrarily assigned; and it is too small to realistically be supported by
6
7 appraisal techniques.

8
9 65. No evidence of special benefit. Meanwhile, there is “no actual evidence from
10
11 any seller or purchaser that the price was higher because of the LID improvements.”
12
13 *Bellevue Plaza, Inc*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser “has not
14
15 identified any seller or buyer, or any particular property where the existence of the LID
16
17 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
18
19 explained that the property has not increased rental rates or revenue due to the forthcoming
20
21 LID Improvements, because, among other reasons (and apart from COVID), the
22
23 improvements ABS believes will generate value do not exist, and will not for a number of
24
25 years to come. There are no comparable sales because the LID Improvements are not in
26
27 place, nor will they be until the end of 2024 if completed on schedule.

28
29 66. The fair market value of Sound Vista's property has not changed due to
30
31 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
32
33 benefited from installation of new water main and fire hydrant where it was already
34
35 adequately supplied with water and afforded adequate fire protection). And in any event,
36
37 any value attributable to removal of the viaduct was to be excluded from the assessment
38
39 calculation.

40
41 67. There is no special benefit because LID improvements in fact diminish the
42
43 value of Sound Vista's property by increasing vehicle traffic, pedestrian traffic, and
44
45 additional security challenges. *See Kusky*, 85 Wn. App. 493 (testimony of owners' expert
46
47

1 that LID actually diminished value of property was sufficient to rebut presumption that
2 assessment was proper).

3
4
5 68. Moreover, the assessment formula is an attempt to distribute costs that do not
6 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
7 “merely a mathematical model that distributes costs”).
8
9

10
11 69. The Special Benefit Study fails to address whether the \$346,000,000
12 estimated LID project cost takes into account the investment that would have occurred in the
13 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
14 invested. This is a critical component of estimating which properties receive a direct benefit
15 from the improvements, versus more incidental benefits further from the park.
16
17
18
19

20
21 70. The proposed final assessment substantially exceeds the special benefit to the
22 property and is grossly disproportionate to similarly situated properties within the LID. For
23 these reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
24 Sections II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.15.
25
26
27

28 **State Environmental Policy Act and Other Environmental Permitting**

29
30
31 71. While this appeal is not challenging the City’s environmental review and
32 permitting processes, those processes are relevant in determining the legality of the
33 assessments, and to assessing the delivery risk, the present value of the City’s plans, and
34 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
35 pursue projects that have not yet undergone environmental review (thus limiting the choice
36 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
37 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
38 is just beginning. Further, the City has segmented environmental review, and still has a
39 gauntlet of federal, state and tribal review processes to complete before it will be clear what
40
41
42
43
44
45
46
47

1 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
2 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
3 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
4 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
5 committing to reconstruction of Pier 58 and major street improvements without
6 environmental review, or the City's Final Special Study has improperly included and is
7 proposing to assess the Taxpayer the costs and special benefits of improvements that may
8 not get built. Either way, it is faulty process.
9

10 **Due Process Rights**

11 72. The City's failed to notify Sound Vista sufficiently in advance of the hearing
12 to allow Sound Vista to obtain evidence and prepare to properly challenge the assessments.
13 Because LID assessments involve a deprivation of property, affected owners have the right
14 to a hearing as to whether the improvement resulted (or will result) in special benefits to
15 their properties and whether their assessments are proportionate, which necessarily includes
16 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
17 555, 569–70, 229 P.3d 761 (2010).
18

19 73. The LID statute specifies that cities must mail notices giving the time and
20 place of the hearing to the affected owners "[a]t least fifteen days before" the hearing and
21 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
22 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
23 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
24 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
25 secure their own appraisal), evaluate proportionality of the proposed assessments, and
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
2 for anybody to get an appraisal”).

3
4 74. The City’s Notice of Assessment was sent on December 30, 2019. And the
5
6 Final Special Benefit Study has only been available for public review since January 7, 2020.
7
8 Due to this short time frame, Sound Vista requested a prehearing conference and scheduling
9
10 order that would preserve and protect Sound Vista’s right to analyze and respond to the
11
12 Final Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
13
14 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
15
16 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
17
18 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
19
20 the Examiner’s Recommendation: I.B.
21

22 23 **VII. Relief Requested**

24 Sound Vista respectfully requests that the City Council:

- 25
26 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
27
28 and
29
30 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
31
32 assessment dated December 30, 2019; or
33
34 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
35
36 proposed final assessment to \$0 (zero), or such amount as Taxpayer
37
38 establishes at the hearing in this matter; or
39
40 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
41
42 and reduce Taxpayer’s assessment using recognized appraisal techniques
43
44 consistent with USPAP and:
45
46
47

- 1 i. Excluding any property value increase attributable to viaduct removal
2 and other planned WSDOT Improvements;
3
4 ii. Taking into account the effects of the COVID-19 pandemic on the
5 value of Taxpayer's property and other relevant developments since
6 October 2019;
7
8 iii. Accounting for and excluding (1) any special benefits from existing
9 or planned improvements that already provide similar benefits to
10 Taxpayer's property, and (2) any special detriments from construction
11 and other anticipated LID-related disamenities;
12
13 iv. Accounting for and including only those actual benefits anticipated to
14 accrue to Taxpayer's property based on its location relative to Pier 58,
15 Overlook Walk, and the Promenade, and specific elements of the LID
16 Improvements;
17
18 v. Discounting anticipated special benefits to present value, based on
19 reliable estimates regarding when special benefits will start accruing
20 following completion of the LID Improvements; and
21
22 vi. Accounting for such other issues specific to Taxpayer's property
23 relevant to calculation of such assessment; and
24
25
26
27
28
29
30
31
32
33
34
35
36
37 2. Grant such further relief as the City Council deems just and proper.
38
39
40
41
42

NOTICE OF AMENDED APPEAL OF
HEARING EXAMINER’S FINDINGS AND
RECOMMENDATION ON SOUND VISTA
PROPERTIES LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
6094680050

33
34 **SOUND VISTA PROPERTIES LLC (“Taxpayer”)** files this amended appeal
35
36 pursuant to RCW 35.44.070, Seattle Municipal Code 20.04.090, City of Seattle Resolution
37
38 31915, City of Seattle Resolution 31979, the notice of the Seattle Office of the City Clerk
39
40 dated December 30, 2019, the notice of the Seattle Office of the City Clerk dated February
41
42 1, 2021, the Hearing Examiner’s Findings and Recommendation issued September 8, 2020
43
44 (“Examiner’s Recommendation”) and the Hearing Examiner’s Findings and
45
46 Recommendation issued February 1, 2021.
47

1 **I. Taxpayer / Appellant**

2 The Taxpayer filing this amended appeal is:

3
4
5 SOUND VISTA PROPERTIES LLC
6 PO Box 1607
7 Bellevue, WA 98009-1607
8
9

10 **II. Taxpayer's Representatives**

11 SOUND VISTA PROPERTIES LLC representatives in this matter are:

12
13
14
15 R. Gerard Lutz, WSBA No. 17692
16 JLutz@perkinscoie.com
17 Perkins Coie LLP

21 Facsimile: 425.635.2400
22

Robert L. Mahon, WSBA No.
26523
RMahon@perkinscoie.com
1201 Third Avenue, Suite 4900
Seattle, Washington 98101
Telephone: 206.359.8000
Facsimile: 206.359.9000

23 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

24
25 SOUND VISTA PROPERTIES LLC is the taxpayer for the property that is subject
26
27 to the proposed final assessment described in Section IV.
28

29
30 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
31
32 include additional arguments relevant to the revised Final Recommendations of the Hearing
33 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
34
35 objection to the assessment, which was based on the Final Study. Taxpayer further timely
36
37 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
38
39 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
40
41 with the City Clerk on September 22, 2020. This amendment is a supplement is to be read
42
43 together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by
44
45 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
46
47

1 as authorized by the Hearing Examiner, including without limitation all records pertaining to
2 the November 2020 through February 2021 remand hearing ordered by Council.
3

4
5 **IV. Amended Arguments on Appeal**

6 SOUND VISTA PROPERTIES LLC supplements its appeal of the Hearing
7 Examiner's recommendation to deny Taxpayer's objection to the City of Seattle's
8 Waterfront Local Improvement District No. 6751 proposed final assessment dated
9 December 30, 2019 against the following property:
10
11
12

13 King County Parcel No. 6094680050
14 Site Address: 1321 1st Ave, Seattle, Washington
15 Proposed Final LID Assessment for Parcel: \$122,411.85
16
17
18

19 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
20 the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
21 amended appeal.
22
23

24
25
26 **A. The Anticipated Special Benefits to Taxpayer's Property should be**
27 **Discounted to Present Value and Assessments Adjusted as Appropriate**
28

29 On remand, the City's appraiser acknowledged that special benefits to parcels can be
30 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
31 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
32 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
33 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
34 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
35 accepted that recommendation. The City's appraiser further acknowledged that benefit
36 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
37 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
38 (benefits to theatre "would be a long enough time out to where it wouldn't measurably affect
39
40
41
42
43
44
45
46
47

1 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
2
3 calculations to present value because the general benefits are not anticipated from the LID
4
5 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
6
7 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
8
9 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
10
11 benefit calculation, and related assessments, to account for the delay between the assessment
12
13 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
14
15 standard appraisal practice, and renders the other proposed Waterfront LID special
16
17 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
18
19 “fundamentally wrong methods.”

20
21 All special benefit taxes assessed by a municipality must be based on “actual,
22
23 physical and material [special benefits that are] not merely speculative or conjectural.”
24
25 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
26
27 Additionally, the assessments may not materially exceed the actual special benefit conferred
28
29 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
30
31 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
32
33 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
34
35 discount benefits the City estimated would accrue to the properties from improvements to be
36
37 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
38
39 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
40
41 property while treating all or most others (including Taxpayer’s) differently, and
42
43 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
44
45 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
46
47 for some properties because the benefits are too distant, while assessing other properties as

1 though distant benefits have already been secured. As Taxpayer identified in its September
2
3 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
4
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6
7 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
8
9 reject the improper calculation of the benefit or remand and require the appraiser to discount
10
11 the benefits to net present value.

12
13 **B. In Light of Covid's Continuing Impact on Taxpayer and other**
14 **Downtown Property Owners and other Material Changes Since October**
15 **2019, the LID Should be Cancelled, or at Least Assessments**
16 **Recalculated, to take Into Account Property Value Reductions**

17
18 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
19
20 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
21
22 other relevant developments since October 2019." When Washington's first COVID
23
24 restrictions were imposed in March and April 2020, there was an assumption that they
25
26 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
27
28 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
29
30 for another 5 years. Retail stores are boarded up. Residential property values are also down.
31
32 Homelessness and related challenges have gotten much worse. The City has already
33
34 imposed higher minimum wages and taxes on businesses to try to fund recovery. The West
35
36 Seattle Bridge and other bridges are in immediate need of repairs and maintenance. Pier 58,
37
38 instead of the vibrant waterfront park hypothesized in the City's appraisal to exist as of
39
40 October 2019, collapsed, and is several years from completion, as a best case. In current
41
42 circumstances, a downtown tax to fund new, non-essential park improvements against
43
44 financially strapped taxpayers, and likely passed through to financially strapped tenants and
45
46 customers would be unfair to taxpayers and a misallocation of city resources. COVID threw
47

1 everyone for a loop. But as the City rethinks its budget priorities for the next few years, and
2
3 its potentially funding sources, Taxpayer respectfully requests that the City dissolve the
4
5 assessment, at least until property owners and businesses have a chance to recover, and that
6
7 any assessment take into account the changed circumstances since this appeal process
8
9 started on February 4, 2020 to avoid unnecessarily and perhaps permanently killing
10
11 downtown properties and businesses in the name of bettering them.
12

13 **V. Relief Requested**

14
15 Particularly in light of the Committee's decision not to take further comment from
16
17 appellants, Taxpayer respectfully request that each Committee member carefully review the
18
19 full record transmitted to Council before voting on Taxpayer's appeal.
20

21 SOUND VISTA PROPERTIES LLC respectfully reiterates its request from the
22
23 September 22, 2020 appeal that the City Council:
24

- 25 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection; and
26
27 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
28
29 final assessment dated December 30, 2019; or
30
31 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
32
33 proposed final assessment to \$0 (zero), or such amount as Taxpayer
34
35 establishes at the hearing in this matter; or
36
37 c. Remand the matter to the Hearing Examiner or City appraiser to
38
39 recalculate and reduce Taxpayer's assessment using recognized appraisal
40
41 techniques consistent with USPAP and:
42
43 i. Excluding any property value increase attributable to viaduct
44
45 removal and other planned WSDOT Improvements;
46
47

- 1
2
3
4
5
6

- ii. Taking into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and other relevant developments since October 2019;
 - iii. Accounting for and excluding (1) any special benefits from existing or planned improvements that already provide similar benefits to Taxpayer's property, and (2) any special detriments from construction and other anticipated LID-related disamenities;
 - iv. Accounting for and including only those actual benefits anticipated to accrue to Taxpayer's property based on its location relative to Pier 58, Overlook Walk, and the Promenade, and specific elements of the LID Improvements;
 - v. Discounting anticipated special benefits to present value, based on reliable estimates regarding when special benefits will start accruing following completion of the LID Improvements; and
 - vi. Accounting for such other issues specific to Taxpayer's property relevant to calculation of such assessment; and

37 2. Grant such further relief as the City Council deems just and proper.

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON HEDREEN
HOTEL LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NOS.
6195000030 and 6792120010

33
34 Hedreen Hotel LLC (“Taxpayer”) files this appeal pursuant to RCW 35.44.070,
35
36 Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice of the
37
38 Seattle Office of the City Clerk dated December 30, 2019, and the Hearing Examiner’s
39
40 Findings and Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).
41

42
43 **I. Taxpayer / Appellant**

44 The Taxpayer filing this appeal is:
45
46

47 Hedreen Hotel LLC

1 217 Pine St. Suite 200
2 Seattle, WA 98101
3 Zahoor Ahmed
4 206-624-8909
5 ahmed@rchco.com
6

7
8 **II. Taxpayer's Representatives**

9 Taxpayer's representatives in this matter are:

28 Facsimile: 206.359.9000
29
30

31 **III. Statement of Taxpayer's Interest**

32 Hedreen Hotel LLC is the taxpayer for the properties that are subject to the proposed
33 final assessment described in Section IV. These parcels together are the Grand Hyatt
34 Seattle, a 30-story hotel containing 457 guest rooms and 25,000 square feet of meeting
35 space.¹
36
37
38
39
40
41
42
43
44

45 ¹ Mr. Gordon also explained that the building also includes a parking garage and retail space
46 which is a third parcel. But that is treated separately from the hotel in Case No. CWF-0438 (parcel
47 no. 6792120020).

1 The basis of the proposed assessment is a Final Special Benefit/Proportionate
2
3 Assessment Study for Waterfront Seattle Local Improvement District (“Final Study”), dated
4
5 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City’s
6
7 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
8
9 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
10
11 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
12
13 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
14
15 to exclude charges for other improvement projects in the Central Waterfront, and
16
17 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
18
19 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
20
21 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
22
23 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
24
25 because construction was not complete on the LID Improvements or the WSDOT
26
27 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
28
29 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
30
31 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
32
33 was based on the Final Study.

34 35 **IV. Matter Under Appeal**

36 Taxpayer appeals the Hearing Examiner’s recommendation to remand Taxpayer’s
37
38 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
39
40 final assessment dated December 30, 2019 against the following property:

41 King County Parcel No. 6195000030
42 Site Address: 700 Pike St. Seattle, Washington
43 Proposed Final LID Assessment for Parcel: \$985,276
44
45

46 *See* Examiner’s Recommendation at 61-62, 106.
47

1 Taxpayer also appeals the Hearing Examiner's recommendation to deny Taxpayer's
2 objection to the City of Seattle's Waterfront Local Improvement District No. 6751 proposed
3 final assessment dated December 30, 2019 against the following property:
4

5
6 King County Parcel No. 6792120010
7 Site Address: 700 Pike St. Seattle, Washington
8 Proposed Final LID Assessment for Parcel: \$422,541
9

10 See Examiner's Recommendation at 61-62, 106.
11

12 Hedreen Hotel LLC owns real parcel nos. 6195000030 and 6792120010, which are
13 located at 700 Pike Street, Seattle, Washington and are the subject of Case Nos. CWF-0436
14 and CWF-0437. These properties are condominium units housing the Grand Hyatt Seattle.
15 For county property tax purposes, the properties are valued as a unit with 70% of the value
16 assigned to parcel no. 6195000030 and 30% of the value assigned to parcel no. 6792120010.
17 See Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 7. As John Gordon explained, the reason
18 there are two different case numbers for this hotel is because ownership of the hotel was
19 divided into the common areas of the hotel and the tower that houses the guest rooms.
20 4/13/2020 Hrg. Tr. at 91:15-92:9. But for all intents and purposes, it is a single hotel. For
21 this reason, both Mr. Gordon and ABS Valuation treated both parcels as a single
22 consolidated entity. *Id.*; see also Attachment B (ABS Spreadsheet). For this reason alone,
23 Taxpayer appeals the Hearing Examiner's recommendation to deny appeal CWF-0437
24 which is also part of the Grand Hyatt hotel. These cases should be treated together—
25 consistent with the appraisers' valuation—and both should be remanded.
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
41 the Hearing Examiner into this appeal. In particular, Taxpayer points the City Council to
42 Taxpayer's initial Appeal Petition, *Frye* motion, Closing Brief submitted at the close of its
43 case-in-chief (dated 4/16/2020), and supplemental Closing Statement submitted at the close
44
45
46
47

1 of the City's case-in-chief (dated 7/7/2020).² As discussed more fully below, Taxpayer
2 specifically appeals the following Findings and Recommendations in the Hearing
3 Examiner's September 8, 2020 Recommendation: Pages 61-62, 106, Sections II.6, II.7,
4 II.12, II.14, II.16, II.17, II.18, II.19, II.20, II.21, II.22, II.23, II.24, II.25, II.26, II.27, II.28,
5 II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7,
6 IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv),
7 IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.10, IV.C.11, IV.C.12, IV.C.14,
8 and IV.C.18.
9

10 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
11 recommendations on material issues raised during Taxpayer's appeal that were supported by
12 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
13 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
14 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
15 recommended anything other than denial of objectors' appeals were where the City's
16 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
17 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
18 special assessments based on "fundamentally wrong methods."
19

20 The special benefit for which special taxes are assessed must be "actual, physical and
21 material and not merely speculative or conjectural." *Heavens v. King Cty. Rural Library*
22

45
46
47
² Because the City has not provided "metered index numbers," our appeals cannot reference them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the Public Works committee secure and provide appellants with such a record, so that the appeals can then be supplemented with that additional information, so as to make the Committee's consideration of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated, citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors retained by Perkins Coie are part of this case file.

1 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
2 with the law, the assessments may not materially exceed the actual special benefit conferred
3 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
4 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
5 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
6 assessment. In this case, the proposed assessment fails each of the legal requirements for
7 special assessments and must be annulled as arbitrary or capricious, or founded on
8 fundamentally wrong methods.
9
10
11
12
13
14
15
16
17

18 **Legal Requirement:** Actual, non-speculative special benefit

19
20 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
21 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
22 October 2019 (they were not), and an “After” value purporting to assess the value of
23 properties with the LID improvements in place at least five years before anticipated
24 completion.
25
26

27 **Legal Requirement:** Cannot materially exceed the special benefit

28
29 **ABS Study:** ABS calculates a special benefit of \$2,512,671 for parcel no. 6195000030
30 and \$1,076,724 for parcel no. 6792120010 for a total of \$3,589,395, assuming the LID
31 Improvements were in place and providing benefit in October 2019. However, the LID
32 Improvements will not be completed until the end of 2024 if the City meets its current
33 schedule, and many of WSDOT’s alternative improvements will not be built. The present
34 value of future improvements deliverable in five years is significantly lower than the
35 current value of improvements that already exist. Further, ABS’s own materials show that
36 benefits may not accrue for at least five years after they are completed, in 2029. If the
37 hypothesized special benefits are discounted to present value, the assessments materially
38 exceed the hypothesized special benefits.
39
40
41

42 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID

43
44 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
45 prepared his Final Study in October 2019, and the City issued its preliminary roll in
46 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
47

1 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
2 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
3 and must be based on actual special benefits. While that does not mean ABS's appraisal
4 was wrong when completed, values and benefits need to be reanalyzed before assessments
5 are finalized in light of the unprecedented changes to the downtown real property market.
6

7
8 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
9 Assessment cannot include value attributable to future WSDOT Improvements.
10

11 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
12 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
13 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
14 the City's appraiser increased 2019 property market values as though WSDOT had
15 completed its work by 2019. The proposed assessment is against this hypothetical
16 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
17 higher than actual 2019 market values. The City is collecting an assessment against both
18 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
19 contravention of law and the City's promise not to impose an assessment based on the
20 value of viaduct demolition and the other components of WSDOT's planned work.
21
22

23
24 **Legal Requirement:** Benefits must be special, not general
25

26 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
27 due to the LID Improvements. However, the far-reaching and public nature of the
28 improvements make any benefit arising from them general—not special.
29

30
31 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
32 or conjectural"
33

34 **ABS Study:** Not only are the improvements not yet "physical or material," but
35 environmental review and permitting for the City's proposed LID Improvements is not
36 complete, and the LID improvements are not anticipated to be complete until the end of
37 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
38 a manner consistent the City's then-current proposals, which were in many respects merely
39 conceptual designs.
40
41

42 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
43

44 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
45 property (furniture, fixtures and equipment), but not personal property of other types of
46 property. It is not proportionate to assess against hotel personal property and not other
47

personal property. Further, personal property is moveable, the value does not depend on location, and is likely to be fully depreciated and perhaps removed before the LID Improvements are in place. (Note also that personal property accounts are separate, and the City gave no notice of any LID assessment against personal property. The Examiner should have reversed personal property assessments on that basis as well.)

Legal Requirement: Must comply with appraisal standards

ABS Study: ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until the Examiner admonished ABS, ABS even asserted its analysis was "confidential and proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The Final Study fails to meet basic standards for admissibility and must be remanded.

Legal Requirement: Actual and measurable special benefit

ABS Study: ABS's proposed assessments are assigned rather than measured, as demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based on a host of "micro-judgments" that are not supported by any documentation, nor capable of replication or quality assurance/quality control. The assessments are undocumented, unreliable, and not supported by empirical studies, data, or reports.

Legal Requirement: Actual and measurable special benefit—Park benefits must be supported by empirical evidence

ABS Study: Dr. John Crompton, the world's preeminent expert regarding the economic value of parks and other public amenities and on whom ABS purported to rely, testified that ABS had completely misapplied his work and dramatically overstated both the distance to which economic benefits might extend from the LID Improvements and the extent of any anticipated benefit within the potentially benefited area.

Legal Requirement: Actual special benefit—Must take into account potential disamenities

ABS Study: The appraiser ignores the negative value impact of five years or more of construction, as well as other potential disamenities associated with public places.

Legal Requirement: Cannot prematurely commit to build

1 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
2 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
3 are being imposed. But finalizing the roll is a commitment by the City to build the
4 improvements, which is a violation of legal process and commits the City to build things it
5 may not secure permission to build.
6

7
8 In addition to these general objections, there are property-specific issues raised by
9 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
10 statement below.
11
12

13
14 **V. Standard of Review**
15

16 “When considering the assessment roll, the city council sits ‘as a board of
17 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
18 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
19 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
20 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
21
22

23 The proposed assessments are presumed correct, “unless overcome by clear, cogent
24 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
25 than the heightened presumption of correctness on judicial appeal because “applying these
26 elevated standards at the municipal hearing would afford unwarranted deference to a report
27 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
28 presumption is not evidence and its efficacy is lost when the other party adduces credible
29 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
30 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
31 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
32 presented credible evidence showing that the City’s proposed assessment is arbitrary,
33 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 to the City to prove the assessments are actual, measurable, special, non-speculative and
2 proportionate. The City failed that burden.
3

4 **VI. Grounds for Appeal**

5
6 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
7 following grounds.
8
9

10 **Taxpayer Not Required to Provide A Special Benefit Study**

11
12 1. Contrary to the Examiner's findings and recommendations, there is no
13 requirement that experts or property owners provide an alternative special benefit
14 calculation under these circumstances—to do so would also require the same improper
15 speculation the City's expert engaged in, given the timing and information provided. *See,*
16 *e.g.,* Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
17 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
18 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
19 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
20 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
21 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
22 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
23 provided expert opinion showing that improvements actually diminished value of the
24 property). In fact, no independent evidence is required at all if, for example, objectors show
25 that the assessment was grounded on a fundamentally wrong basis due to an error in the
26 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
27 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
28 a property owner could simply point out that the square footage assumed in the City's
29 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Examiner's Recommendation: Sections II.12, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8,
2 and IV.C.11.
3

4
5 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

6
7 2. RCW 35.43.040 provides cities and towns authority for ordering local
8 improvements and for levying and collecting special assessments "on property specially
9 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
10 upon all the property in accordance with the special benefits conferred thereon." RCW
11 35.44.010.
12
13
14

15
16 3. No analysis of general benefits. Special assessments have been "held valid
17 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
18 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
19 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
20 they are for the construction of local improvements that are appurtenant to specific land and
21 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
22
23
24

25 4. Taxpayer's property is not specially benefited by the LID Improvements.
26 The primary purpose and effect of the LID Improvements are to benefit "members of the
27 whole community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public
28 library is for the benefit of the members of the whole community individually and
29 collectively who may be served by it"). Mr. Macaulay's own chapter of the LID Manual
30 states clearly that appraisers should "[c]onsider general benefits as well as special benefits"
31 (Hrg. Exhibit 117 (LID Manual) at 58³) and he admits that "general benefits probably accrue
32
33
34
35
36
37
38
39
40
41
42
43

44 ³ "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
45 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
46 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
47 days of cross-examination of the City's witnesses (June 23, 25 and 26, 2020). For ease of reference,

1 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
2 that if an appraiser “identifies both general and special benefits, these benefits should be
3 clearly distinguished and explained, and only special benefits should be included in the
4 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6 183:4; P. Shorett January 30, 2020 Appraisal Review (attached to Appeal Petition) at
7 Attachment p. 15 (explaining the examples in the Final Study only provide information
8 about general benefits and Study does not use proper measure of analysis to show special
9 benefits).

10
11
12
13
14
15
16
17
18
19 5. It is undisputed that Mr. Macaulay did not analyze or measure general
20 benefits, including those arising from construction necessary to meet basic design standards.
21 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
22 construction costs related to meeting design standards which may be general benefits as
23 distinct from construction costs emanating from requirements of the LID project”). To the
24 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
25 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
26 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
27 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

28
29
30
31
32
33
34
35 6. LID Improvements not necessary. Unlike typical LID projects, the
36 Waterfront LID improvements are largely unnecessary to the functionality of any particular
37 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
38 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
39
40
41
42
43
44
45

46 Taxpayer has attached a master list of the hearing exhibits and evidence as Attachment A to this
47 appeal notice.

1 held invalid where owners would have benefitted equally from increase of only 9 feet);
2
3 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
4
5 intersection for new water main for hydrant held invalid because land was already afforded
6
7 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
8
9 not necessary to their hotel business, which caters primarily to business travelers attending
10
11 conventions and meetings and visiting Seattle companies. Hrg. Exhibit 114 (Decl. of Z.
12
13 Ahmed) at ¶¶ 57, 64, 65. For this reason, the Grand Hyatt does not expect the LID
14
15 Improvements to increase impact on demand for rooms or room rates. *Id.*

16
17 7. The fact that there is no case law differentiating between binary
18
19 improvements and parks does not change the law prohibiting assessments on properties
20
21 already adequately served by existing amenities. *See* Examiner's Recommendation at
22
23 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
24
25 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
26
27 reasoning excuse the City's failure to account for existing amenities as part of the special
28
29 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
30
31 the incremental effect of new park improvements on the value of properties, much like
32
33 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
34
35 (Crompton's Report) at 12-13.

36
37 8. To the extent benefits can be considered "special" as opposed to general, they
38
39 are nominal or nonexistent for many properties even in the Central Waterfront, which
40
41 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
42
43 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
44
45 change due to expansion of sewer service *near* owners' parcel which were already
46
47 connected). Even if the City could assess for a view change (and it has promised not to

1 assess for viaduct removal), the fair market value of Taxpayer's property has not changed
2 because the LID Improvements have not improved the property's waterfront view or access
3 to the waterfront, nor will they when the City anticipates completion in 2024. For these
4 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
5
6 Sections IV.C.3, IV.B.9, and IV.C.3.
7
8
9

10 9. No analysis of special detriments. The Final Study fails to properly account
11 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
12 owners for removal and cleanup of underground storage tanks discovered during the
13 improvement project). Although Mr. Macaulay claims he analyzed impacts on the City's
14 planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation
15 of how lost parking might be a detriment, and no property-specific parking analysis in any
16 of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg.
17 Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
18
19
20
21
22
23
24
25

26 10. Likewise, there was no analysis of the risks associated with disamenities such
27 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
28 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
29 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
30 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
31 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
32 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.⁴ And if
33
34
35
36
37
38
39
40
41
42
43
44

45 ⁴ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
2 the maintenance agreement. *Id.* at 13:4-14:2.

3
4
5 11. There was also no consideration of negative impacts from another four-plus
6 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
7 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
8 law allowing him to dismiss these actual, non-speculative impacts. Because future special
9 benefits calculations are inherently speculative, Washington's eminent domain statute
10 specifically allows condemnees to postpone special benefits assessments until improvements
11 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
12 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
13 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
14 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
15 Greenway, the Greenway district "significantly" lagged in value).
16

17
18 12. Meanwhile, Mr. Ahmed testified that the assessment is an immediate expense
19 for the Grand Hyatt that comes with no immediate increase in revenue, thereby decreasing
20 property values. *See* Hrg. Exhibit 114 (Decl. of Z. Ahmed), ¶¶ 65-67. Mr. Ahmed further
21 testified that the Grand Hyatt will receive no special benefit from the proposed
22 improvements, and in fact the property is more valuable without the proposed LID
23 improvements and the corresponding assessment. *Id.* For these reasons, Taxpayer appeals
24 the following portions of the Examiner's Recommendation: Sections II.25, IV.B.8, and
25 IV.B.9.
26

27
28 13. Special benefit estimate is speculative. When calculating a special benefit,
29 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
30 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp. 6097*, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4 14. Assuming without conceding that one day, the City’s planned LID
5 Improvements might increase the value of neighboring properties to some extent, that
6 potential benefit is many years away and speculative. While appraisers tolerate some degree
7 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
8 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
9 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
10 the level of precision implied in the Final Study due to the size of the LID and use of
11 hypotheticals).
12
13
14
15
16
17
18
19

20 15. Although LIDs are sometimes finalized prior to completion of improvements,
21 this is typically just six month or a year prior, and the assessments are otherwise supported
22 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
23 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
26 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
27 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
28 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
29 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
30 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
31 market value would be as of the date the project would be finally constructed” because
32 “[t]here could be a lot of elements in the market that did occur between now and then that
33 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
2 fluctuate over time” and “I can’t predict the future”).

3
4 16. The record is clear that while no one can know what “special benefit” might
5 accrue to these properties in four years (if any), we do know that there are no actual benefits
6 now. The LID improvements provide no immediate special benefit to property owners
7 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
8 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
9 sewer system for future users). For example, notwithstanding the questionable hypothesis
10 that hotels will benefit from an expected increase in tourism (higher room rates or
11 occupancy) when the improvements are complete, it is undisputed that tourists are not
12 coming in larger numbers and paying higher room rates now because of something
13 happening five years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23.

14
15 17. Further, there are no “plans and specifications” on file with the Clerk’s Office
16 for the LID Improvements, and it is unlawful to move to final assessments without such
17 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
18 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
19 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
20 dollars on projects still early in the design process. *See* Washington Attorney General
21 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
22 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
23 of programs and included “only so much of the overall costs” that took place within and
24 benefitted the assessed properties).

25
26 18. The COVID-19 crisis highlights how fundamentally speculative and unfair it
27 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 anticipated to be delivered five years later. Even before COVID, it was speculative to
2
3 assume that market highs experienced in October 2019¹ would be sustained through 2024,
4
5 after an already extraordinarily long expansion period. *See, e.g.*, 3/3/2020 (A. Gibbons)
6
7 Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing
8
9 my analysis in October 2019, who would have thought that this COVID issue would
10
11 happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought
12
13 process was that the market was going to continue to go up”—in fact, it did not for
14
15 Taxpayer’s property. *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that
16
17 downtown hotel values had already dropped an estimated 10-15% from their October 2019
18
19 levels, and occupancy rates were at zero or in single digits. *See* Gordon Decl. (dated
20
21 4/21/2020) at ¶ 9. Hotels without guests will derive no benefit, special or otherwise, from
22
23 the planned LID Improvements. And even assuming hotels recover prior to 2024, there is
24
25 no basis for assuming that values hypothesized in October 2019 will remain relevant; they
26
27 are already irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020).
28
29 Although COVID does not change actual values as of October 2019 (*see* Examiner’s
30
31 Recommendation at 109), the pandemic has impacted *current* values and rendered the
32
33 hypothetical October 2019 Final Study valuations outdated.

34
35 19. As another example of how future events could affect the accuracy and
36
37 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
38
39 Examiner re-open the record to allow the City to explain whether the assessments against
40
41 property owners within the LID are, in fact, being used by the City to fund the emergency
42
43 dismantling and reconstruction of Pier 58.⁵ It has been reported that the City plans to use
44

45
46 ⁵ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King
47 5, Aug. 15, 2020), available at <https://www.king5.com/article/news/local/seattle/seattle-mayor->

1 LID funding to pay for the expedited, emergency repairs and replacement.⁶ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10
11 20. There is also no certainty the improvements will be delivered on time. Mr.
12 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
13 delay in construction schedule would not constitute a “material change” under the City
14 Council’s ordinance authorizing the improvements. In other words, the City cannot
15 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
16 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
17 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
18 potential delays and project changes inherent in those processes, that call into question the
19 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
20 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
21 Decl., dated 4/15/2020).

45 ⁶ Asia Fields, ‘Substantial’ pier shift closes Seattle’s Waterfront Park (Seattle Times, Aug. 8,
46 2020), *available at* [https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/)
47 [waterfront-park/](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/).

1 21. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
2 he could not point to a single one where the assessment roll was finalized five years in
3 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
4 he has never recommended final special assessments based on designs less than 30 percent
5 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
6 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
7 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
8 at 66:17-25. He performed no independent due diligence to determine the reliability of the
9 City’s estimates for completion of the LID Improvements, or to ensure that proposed
10 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
11 agreed that if any of his assumptions are incorrect, his opinion of market value would need
12 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
13 68:11-18.

14 22. The City has cited no authority—and Taxpayer is aware of none—that
15 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
16 assess taxes for “actual” special benefits that will not accrue for another five years (if all
17 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
18 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
19 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
20 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
21 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
22 IV.C.14, and IV.C.18.

23 23. Failure to discount special benefit estimates to account for risks and present
24 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should

1 have accounted for risks associated with delivery of the improvements (including permitting
2 risk, construction risk, general economic risk) and any special damages associated with
3 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
4 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
5 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
6 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
7 the impact of future conditions [through] discounted cash flow analysis.”).
8
9
10
11
12
13
14

15 24. Mr. Macaulay acknowledged that appraisers can discount the value of a
16 future condition not in place at the date of valuation and can discount for the time value of
17 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
18 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
19 Discounting would also have been consistent with his approach for analyzing special
20 benefits to vacant land. He testified that the difference between similarly situated vacant
21 sites slated for development and already developed sites was that the labor, capital and risks
22 associated with development had not yet been borne for those vacant sites. Therefore, the
23 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
24 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
25 fully permitted, has not completed environmental review, and has not reached full design is
26 presently worth significantly less.
27
28
29
30
31
32
33
34
35
36
37

38 25. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
39 present value, an appraiser would consider discount rates for land development to account
40 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
41 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
42
43
44
45
46
47

1 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
2 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
3

4
5 26. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
6 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
7 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
8 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
9 ignoring momentarily all of the other methodological and other flaws discussed here and in
10 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
11 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
12 exceeds special benefits when reduced to present value. Further, to the extent the City is
13 arguing that because they are permitted to assess 100% of the special benefit, the special
14 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
15 is again wrong. After applying proper discounting, the City's proposed special benefit
16 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
17 100% of the total estimated special benefit.
18
19
20
21
22
23
24
25
26
27
28
29

30 27. But even the assumption that the LID improvements would deliver benefits
31 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
32 on. Rather, those studies demonstrate that a discount period of five years is conservative.
33 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
34 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
35 indicates that during the construction period, the Greenway district "significantly" lagged in
36 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
37 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
38 30-31 (discussing New York City High Line and San Francisco Embarcadero
39
40
41
42
43
44
45
46
47

1 improvements). Given the lengthy delay, any prediction of future special benefits is
2 speculative, especially during the construction phase where values are likely to decline.
3
4 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
5
6 Improvements take a similarly long period of time after they are complete to start producing
7
8 tangible property value benefits, each additional year of delay results in further discount to
9
10 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
11
12 A.
13

14
15 28. Applying the same discounting methods described above and in Mr. Gibbons
16
17 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
18
19 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
20
21 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
22
23 100% assessment should be no more than \$338,121. Anything more would permit the City
24
25 to assess Taxpayer based on a hypothetical assumption that these improvements are in place
26
27 and providing benefit, and ignore the risks, construction disamenity, and time value of
28
29 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
30
31 would counsel that the assessment should be only 39.2% of that assessment cap, or
32
33 \$132,543.
34

35 29. Attachment C includes two Excel spreadsheets applying these discounting
36
37 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
38
39 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
40
41 demonstrates that discounting the City's hypothetical October 2019 special benefits to
42
43 present value would reduce Taxpayer's assessment to \$483,004, exclusive of any other
44
45 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
46
47 reductions after taking into account: (1) Taxpayer's experts' estimated "Before" value based

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
5 the time it takes for the improvements to capture property value). After such reductions,
6
7 Taxpayer's assessment would be just \$297,421 (for the 5-year discount) or \$81,721 (for the
8
9 10-year discount). Further, the spreadsheet concludes a "zero" benefit for this property
10
11 because, based on Dr. Crompton's testimony, Taxpayer's property is more than 2,000 feet
12
13 from the core "park" improvements and therefore too distant to receive any special benefit.
14
15 Neither of these spreadsheets address other issues raised by Taxpayer's appeal, but are
16
17 intended to help demonstrate how unfair and inflated the City's proposed hypothetical
18
19 assessment is. The Hearing Examiner's Recommendation simply dismisses Taxpayer's
20
21 discounting argument without legal or factual analysis; that failure is error.
22
23

24 **Appraisal and Assessment Calculation Methods Are Flawed**

25
26 30. The "general rule is that each lot, piece, or parcel of land should be assessed
27
28 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
29
30 Wn.2d at 97.
31

32
33 31. It is proper to sustain a challenge to an assessment, even without the appraisal
34
35 testimony from the owner, where the objector's expert establishes that the assessment was
36
37 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
38
39 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
40

41 32. The City's appraiser purports to utilize the income method of valuation but
42
43 relied on inaccurate revenue and market data, as discussed further below.
44

45 33. The City's appraiser purports to utilize the comparable sales method of
46
47 valuation, but no City witness attempted "to characterize any one, or all of them, as

1 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
2 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
3 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
4 characterize any one, or all of them, as comparable to any particular property within the LID").
5 And no City witness could explain how specific adjustments were made to these sales to
6 account for value increases due to the hypothesized Before and After Improvements. For this
7 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
8

9
10
11
12
13
14
15 34. Special assessment improperly includes value lift from the Before
16 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
17 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
18 Improvements, which WSDOT had independently committed to fund. However, Mr.
19 Macaulay did not calculate the actual market value of LID properties in October 2019, and
20 did not separately analyze the hypothetical increase to property values attributable to
21 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
22 current value and then separately calculate a hypothetical "With WSDOT" Before value);
23 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
24 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
25 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
26 documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
27 occupancy and rates would have been for the commercial properties assuming all of the
28 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
29 outright omission precludes any independent evaluation of the true market "Before" values.
30 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
31 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
2 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
3
4 other road, pedestrian and landscaping improvements WSDOT had already committed to
5
6 make.
7

8
9 35. However, because Mr. Macaulay testified that he did include some WSDOT-
10 related value-lift in the “Before” values, it follows that part of the special assessment
11
12 improperly is based on value attributable to the WSDOT Improvements. As shown by
13
14 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
15
16 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
17
18 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
19
20 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
21
22 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
23
24 to properly exclude the value of Before Improvements from the assessments. For these
25
26 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
27
28 Sections II.16, II.19, II.29, and IV.B.11(a)(ii)
29

30
31 36. Special benefits were assigned rather than measured. Mr. Macaulay
32
33 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
34
35 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
36
37 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/3/2020 (A. Gibbons)
38
39 Hrg Tr. at 88:25-89:3; 90:8-91:13. Based on formulas in spreadsheets that Mr. Macaulay
40
41 used to analyze the commercial properties, Taxpayer’s experts concluded that Mr. Macaulay
42
43 based adjustments on hypothesized very small increases to property revenue and very small
44
45 reductions to cap rates to “calculate” an “After” value due to the coming 2024 LID
46
47

1 Improvements. Attachment B (ABS Spreadsheet). These series of micro adjustments were
2 based on “professional judgment” that are neither shown nor replicable.
3

4
5 37. For these reasons, Taxpayer appeals the following portions of the Examiner’s
6 Recommendation: Sections II.19 and IV.B.11(a)(iii).
7

8
9 38. Special benefit falls within margin of error. The Final Special Benefit Study
10 applies an estimated value enhancement of less than 4%, which is generally within the
11 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
12 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
13 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
14 of one another, this difference is considered reasonable as it falls within the standard margin
15 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
16 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay’s micro-special benefit
17 percentages fall far below that 5% margin, “there is no way of authenticating” such
18 incremental changes because “[m]arket forces completely obliterate any tiny little noise
19 factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
20 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25.
21 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
22 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
23 appraiser to discern the micro-value differences between hypothetical conditions that are so
24 similar (the WSDOT improvements compared to the LID improvements) “verges on being
25 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
26

27
28 39. Even if it were possible to accurately tease out such a miniscule hypothetical
29 value change due to improvements coming five years later, experts testified that there is no
30 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at
2
3 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 40. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 41. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁷ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 42. Special assessment is not supported by comparable studies, data or reports.
25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for the commercial properties, including Taxpayer’s
30 property. For example, although Mr. Macaulay stated that no single report or study was
31
32
33
34
35
36
37
38
39

40
41 ⁷ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
2 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
3 parcel-by-parcel analysis other than to say that the studies generally provided “some
4 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
5 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
6 similarities and differences between these improvements and the comparable parks he
7 looked at).

14 43. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
15 assignment of incremental increase of 0.5% to 4% to property values within the LID.
16 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
17 research misinterprets his work in critical ways, including because the LID Improvements
18 manifest the characteristics of a parkway (not a park), and his research indicates that most of
19 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
20 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
21 related value increases are in fact smaller; that estimated increases are “best guesses” rather
22 than predictions of property value increases in a particular city; and that percentages do not
23 account for diminishing returns after taking into account water views, which would be the
24 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
25 topography grants most properties in downtown a water view.

38 44. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
39 that this was just one source of information that was not entirely relevant because, among
40 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
41 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
42 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3 Crompton concluded that 500 feet via road from “park” improvements is just one or two
4 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
5 significantly beyond that which the park study indicated (even if it was legitimate to use the
6 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
7 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
8 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
9 Taxpayer’s property is even not within 2,000 road network feet from the “park”
10 improvements. *See* Hrg. Exhibits 104 (Ellen Kersten Decl.) at Ex. E, F; 114 (Decl. of Z.
11 Ahmed) at ¶ 63.

12 45. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
13 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
14 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
15 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
16 materials, it was clearly an important—if not *the* most important—source of information for
17 estimating special benefits (especially with respect to the condos).⁸ No City witness
18 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
19 parcel-by-parcel analysis.

43
44
45
46
47

⁸ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr. at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a park (or streetscape) improvement—other studies estimated premiums for real estate only much closer or cited to Dr. Crompton.

1 46. The destination parks discussed in the Final Special Benefit Study do not
2 provide reliable, comparable, and valid support for the calculation of special assessments
3 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
4 critique of every case study cited concludes the changes to those “dwarf the difference
5 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
6 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
7 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
8 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
9 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
10 funded by a LID. And in virtually all of those cases, the park improvements dramatically
11 restored unimproved or blighted areas, and properties evaluated were within two or three
12 blocks of the park.
13

14 47. ABS’s claimed reliance on three economic studies to support property value
15 increase is also flawed. The HR&A study does not inform what value increases are
16 expected from the LID Improvements because it projects increases to tourism from *all* of the
17 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
18 dissimilar parks in other cities,⁹ making the methodological application to the LID
19 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
20 conclusion that there would be *no new net visitors* from downtown residents as a result of
21

22 ⁹ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
23 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
24 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
25 expected tourists visiting the LID park was calculated using data from only from New York City, a
26 notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to
27 increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to
28 how hotel visitors actually select hotels to stay in.
29

1 the LID Improvements and could not explain how this impacted his condo analysis.
2
3 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
4 Property Values” primarily focused on whether the benefits accrue to the larger community
5 rather than properties adjacent to the park. And the 2014 New York City Department of
6 Transportation study is not based on real estate transactions and market sales and fails to
7 substantiate any link between increased retail sales and property values. Moreover, this
8 study only looked at impact either directly abutting the streetscape improvement, or a couple
9 hundred feet for plaza-like improvements.
10

11
12 48. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
13 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
14 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
15 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
16 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
17 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
18 asked whether he considered that HR&A’s estimated LID impact is six times greater than
19 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
20 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
21 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
22 assumptions to account for this difference, which may be partly explained by the fact that
23 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
24 approximately 3.44% of King County tourists visit Seattle primarily because of the city
25 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
26 waterfront improvements.

39
40
41
42
43
44
45
46
47

1 49. Although proximity to the improvements is a key factor in all of these
2 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
3 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
4 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
5 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
6 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
7 Improvements is approximate 20 acres and it is not a community park.¹⁰

8 50. There is no explanation in the Final Study or the supporting materials of how
9 the studies or comparable sales were used to derive values for Taxpayer's property. For
10 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
11 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

12 51. Failure to comply with USPAP. Taxpayer's assessment also rests on a
13 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
14 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
15 recognized) for developing the MAI standards for mass appraisals, testified that the Final
16 Study does not meet mass appraisal standards nor allow for independent assessment of the
17 accuracy of Mr. Macauley's conclusions.

18 52. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
21 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's

22 ¹⁰ *See*
23 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
24 connecting Seattle's central waterfront to downtown.").

1 testimony suggests that he incorrectly believed that the only difference between direct
2 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
3
4 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
5
6 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
7
8 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
9
10 Gordon uses in doing his limited restricted report”).
11

12
13 53. But the difference is not only in reporting—mass appraisal techniques must
14
15 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
16
17 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
18
19 parcel approach:

20
21 The mass appraisal technique is an appraisal method used to evaluate
22
23 a group of properties that are subject to similar market forces as of a
24
25 certain date through the use of market data, statistical analysis and
26
27 testing. As a result, the mass appraisal technique does not require or
28
29 involve analysis of each individual property’s specific data.
30

31
32 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
33

34
35 54. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
36
37 universe of properties as a given date using standard methodology, employing common data,
38
39 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
40
41 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
42
43 model” is “a mathematical expression of how supply and demand factors interact in a
44
45 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
46
47 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

1 55. Regardless of client direction, Mr. Macaulay is required to comply with
2
3 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
4
5 economically feasible because it would have taken “an incredible amount of time and cost”
6
7 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
8
9 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
10
11 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).

12 56. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
13
14 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
15
16 value, fails to calibrate the model structure to determine the contribution of the individual
17
18 characteristics affecting value, and does not review the mass appraisal results against actual
19
20 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
21
22 217:1;¹¹ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

23 57. Mr. Macaulay explained that factors like “aesthetic change in the area, the
24
25 proximity to the elements, the increase in market rent, market vacancy changes,
26
27 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
28
29 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
30
31
32

33
34 ¹¹ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
35 relationship between characteristics that affect value, and to calibrate that model to specify how
36 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
37 21). The purpose is to rationally determine what characteristics will create value, and by how much.
38 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
39 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
40 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
41 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
42 include explanation of the model specification, data requirements, calibration methods, and
43 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
44 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
45 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
46 Hrg. Tr. at 206:15-207:17.
47

1 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
2 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
3 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
4 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
5 were hypothetical, it was not possible to identify matched pair sales and no City witness
6 explained how ABS Valuation made adjustments to “comparable” sales in order to check
7 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
8 him to explain his model structure.
9

10
11 58. For these reasons, Taxpayer appeals the following portions of the Examiner’s
12 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
13 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
14 and appeals the Examiner’s denial of that motion.
15

16
17 59. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, the Grand
21 Hyatt is more than a 3/4 of a mile walk—more than 2,700 feet as a crow flies—from Pier 58
22 and the core “park” improvements. Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 63. And, as
23 described above, the special assessment is overstated because the Final Study makes no
24 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
25 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
26 improvements were not in in place—and, in fact, much of the waterfront is a construction
27 zone following removal of the viaduct and now Pier 58 demolition. Under these
28 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Mr. Macaulay at the very least should have discounted the special benefit estimates or
2 waited to perform the Study until the improvements were at least close to complete.
3

4 **Erroneous Pre-Improvement Valuation**

5
6 60. The proposed final assessment erroneously overstates the pre-improvement
7 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
8 benefit to the Taxpayer's property.
9

10
11
12 61. The City's Final Study was used to compute the proposed final assessment of
13 Taxpayer's property. The City's Study purportedly uses data from the King County
14 Department of Assessments,¹² but the pre-improvement valuation information in the Final
15 Study does not accurately reflect this data. For example, the City's Study values parcel
16 6195000030 at \$167,511,400 and parcel 6792120010 at \$71,781,600, for a total of
17 \$239,293,000 as of October 1, 2019. But the King County assessor determined the true and
18 fair value of the parcels at \$185,398,000 (\$129,778,600 and \$55,619,400, respectively),
19 valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's
20 valuation is 129% of King County's assessed value for both parcels. The Final Special
21 Benefit Study does not explain this difference—or any differences—between its pre-
22 improvement valuation and its supposed source for market data. For this reason, Taxpayer
23 appeals Section IV.C.11 of the Examiner's Recommendation.
24
25

26
27 62. Further, the City's analysis was based on unreliable market data. For the
28 hotels, Mr. Macaulay's decision to rely on inaccurate market data notably deviates from
29 standard appraisal practices because more reliable data in the form of STR reports are
30
31
32
33
34
35
36

37
38
39
40
41
42
43
44
45 ¹² See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet
46 (providing a "County Link" to the King County Department of Assessment's online "eReal
47 Property" search tool).

1 readily available. Examiner Recommendation at Section IV.C.10; 3/12/2020 (J. Gordon)
2
3 Hrg. Tr. at 196:5-197:12; 215:9-18. Without the STR reports or actual input from the hotels,
4
5 Mr. Macaulay's "Before" valuations are drastically overstated in large part because he relies
6
7 on publicly available "room rack rates" to estimate hotel income. *See id.* (J. Gordon) at
8
9 162:3-18; 170:16-171:13; 179:25-180:14; 192:15-22. As the Examiner found, "Mr. Gordon
10
11 is a specialist expert in appraising hotels and his expert opinion, in addition to the specific
12
13 information he relied on for that opinion, is superior to the opinion and supporting data of
14
15 the City in its valuation." Examiner's Recommendation at II.16. The Examiner concluded
16
17 that Mr. Gordon's valuations were more reliable "due to the specialist nature of Mr.
18
19 Gordon's background and the specificity of the valuation data upon which he relied"—
20
21 namely STR reports or actual revenue data from the hotel. *Id.* at IV.C.10. Therefore, "the
22
23 valuation of [this] property should be remanded for recalculation by the City appraiser based
24
25 on the information provided by [this] Objector." *Id.*

26
27 63. Specifically, the evidence and testimony presented showed that the actual
28
29 average daily room rate (ADR) for this property in 2019 was \$234. However, Mr. Macaulay
30
31 incorrectly estimated an ADR of \$355 for this property which is 51% higher than actual
32
33 ADR, far exceeds the most optimistic assumptions about future growth in hotel room rates
34
35 for the Grand Hyatt, and is not a reasonable assumption in valuing a hotel of this type in the
36
37 downtown Seattle market. In addition, the Grand Hyatt has significantly reduced operations
38
39 as a result of the COVID-19 outbreak.

40
41 64. Due to these errors alone, Mr. Macaulay artificially raised the property's
42
43 Before value; Mr. Gordon valued the property at \$168,400,000 (without personal property),
44
45 which is \$70,893,000 (or about 30%) less than ABS Valuation's estimate. Setting aside that
46
47 ABS Valuation's inclusion of personal property when valuing hotels is disproportionate and

1 flawed, Mr. Gordon's estimate of value including personal property is \$175,300,000, which
2 is still significantly lower than ABS Valuation's estimate (\$239,293,000). See Fourth Decl.
3 of Gordon, at ¶ 5 (dated 7/7/2020).
4

5
6 65. Taxpayer expects an opportunity to respond to the revised assessment once
7 that is provided (see Examiner's Recommendation at V) and appeals the remainder of
8 Section IV.C.10 of the Examiner's Recommendation rejecting Taxpayer's other bases for
9 reducing the assessment. For example, Taxpayer disagrees with the Examiner's conclusion
10 that one of the reasons Mr. Gordon's appraisals concludes a lower value for this property is
11 because he was not valuing the properties in the "Before" condition. Examiner's
12 Recommendation at Section II.16. This does not explain the 51% difference between ABS
13 Valuation's estimate and actual average room rates for the Grand Hyatt. Further, Mr.
14 Lukens—who reviewed ABS's valuation estimates for reasonableness—was not even aware
15 that the Before values were supposed to include the WSDOT Improvements. 6/26/2020
16 Hrg. Tr. at 165:2-166:22.
17

18
19 66. Thus, aside from multiple other reasons why computation of the special
20 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
21 improvement values that do not accurately reflect market data. For these reason, Taxpayer
22 appeals Section II.16 of the Examiner's Recommendation.
23
24

25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47

Erroneous Computation of Special Benefit

67. "Special benefit" is "the increase in fair market value attributable to the local
improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
may receive by reason of the improvement is not measured alone by the physical character
or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is

1 the particular tract or property benefited by the entire improvement, and is it assessed
2 proportionately with the other property included within the assessment district?” *Id.* 165–
3
4 66.
5

6 68. The proposed final assessment erroneously overstates the special benefit of
7
8 LID improvements in a number of ways.
9

10 69. Overstated Before value led to overstated special benefit. ABS Valuation’s
11 overstated Before value resulted in an inflated special benefit estimate and assessment after
12
13 Mr. Macaulay made micro adjustments to “Before” revenue and capitalization rates to
14
15 calculate an After value. Mr. Macaulay conceded that using his methods and his
16
17 spreadsheets, changing the room rate alone would change the special assessment. 6/25/2020
18
19 Hrg. Tr. at 42:21-43:15 (explaining that changing the room rate will result in a different
20
21 assessment and the same is true for every hotel); *see also* 6/23/2020 Hrg. Tr. at 111:9-11,
22
23 132:12-133:10, 140:20-141:9. And he agreed that if Mr. Gordon’s numbers are accurate—
24
25 and there is no evidence they are not—then ABS would need to redo the appraisal for the
26
27 Grand Hyatt to determine if adjustments are needed. *See id.* 137:20-138:13.
28
29

30 70. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
31
32 the Grand Hyatt, Mr. Macaulay assumed room/rental rates would increase by 0.60% (low)
33
34 and 1.20% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is not
35
36 possible to accurately conclude that the reason for this level of percentage increase would be
37
38 due to the LID Improvements, and there appears to be no support for assignment of these
39
40 percentages. Based on formulas in the spreadsheets, Mr. Macaulay then uses these same
41
42 percentages (0.60% and 1.20%) to increase food and beverage revenue, and parking and
43
44 other income. He then uses this hypothesized increased revenue to calculate a new net
45
46
47

1 operating income for the commercial properties and capitalizes that to come up with an
2 “After” valuation.
3

4
5 71. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
6 operating income remains the same as in the hypothetical “Before” condition, but changes
7 the cap rate. For the Grand Hyatt, the cap rate goes from 7.25% to 7.11% (low scenario,
8 creating a bigger value increase) and 7.17% (high scenario, creating a lower value increase).
9 Mr. Gordon likewise explained that cap rate changes of 0.14% or 0.08% are not typically
10 measurable, and there appears to be no support for these changes in the Final Study or any
11 of its supporting materials.
12
13
14
15
16
17

18
19 72. Mr. Macaulay then averages his four “After” values to arrive at a final special
20 benefit conclusion. For the Grand Hyatt, this is an increase in property value of 1.50% due
21 to the LID Improvements.
22
23

24
25 73. Mr. Macaulay offered little justification for his micro adjustments to revenue
26 and capitalization rates. When asked precisely what the basis is for his special benefit
27 percentage increases to revenue for each commercial property, he could not point to
28 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
29 is nothing in the report to allow a reader to understand how he came up with these
30 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
31 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
32 the basis for his belief that certain factors—liked increased connectivity—will increase
33 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
34 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
35 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
36 sources equally even though there was no separate analysis done for food and beverage or
37
38
39
40
41
42
43
44
45
46
47

1 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
2 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
3 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
4 properties.
5
6

7
8 74. When asked the basis for making such adjustments for the hotels, Mr.
9 Macaulay pointed to “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7
10 (“Mr. Lukens helped significantly in that regard in helping, you know, look at probable
11 adjustments”). However, Mr. Lukens testified that he did not review the percentage
12 increases. *See* 6/25/2020 Hrg. Tr. at 170:24-172:20.¹³ And he did not review any work or
13 data to determine whether the revenue percentage adjustments in the spreadsheets were
14 reasonable, nor did he ever find them to be unreasonable or suggest any changes. *Id.* at
15 172:3-20. Instead, he appeared to be considering them for the first time on cross
16 examination, testifying that the adjustments “appear to be a kind of sensitivity analysis” and
17 “appear to be a very minor change.” *Id.* at 170:18-172:13. Likewise, he had no
18 understanding of what factors went into determining the change in capitalization rates in the
19 spreadsheets. *Id.* at 173:23-174:1. And he did not know how ABS Valuation reconciled the
20 four scenarios to come to final estimated special benefit. *Id.* at 174:22-175:4.
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38
39 ¹³ As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different
40 special benefit and capitalization rate increases to the parking and retail parcels associated with the
41 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
42 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special
43 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
44 parcels). When asked whether this was a matter of coincidence, his answer was that is “just our
45 estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
46 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
47 though it is one block closer to the waterfront.

1 75. Mr. Macaulay testified that he used comparable sales as a reasonableness
2 check for commercial properties. But as explained above, no City witness has explained
3 how anyone, or all, of the sales are comparable to any particular commercial property within
4 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
5 in order to make sales “comparable,” he would have had to make adjustments to account for
6 Before and After conditions, but there is no way to understand how adjustments were made
7 because he “didn’t do a separate sales comparison approach where we showed adjustments
8 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
9 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
10 *Id.* at 127:10-128:24.

21 76. It also bears noting that any “internal review” of the special benefit estimates
22 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
23 error. Indeed, given all the same information, he seemed to suggest that it would be
24 perfectly reasonable for another experienced appraiser to come up with special benefit
25 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
26 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
27 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
28 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
29 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
30 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
31 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
32 *Recommendation* at IV.B.4. Thus, the special assessment is not actual, measurable or
33 special because it is arbitrarily assigned; and it is too small to realistically be supported by
34 appraisal techniques.

1 77. No evidence of special benefit. Meanwhile, there is “no actual evidence from
2
3 any seller or purchaser that the price was higher because of the LID improvements.”
4
5 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
6
7 identified any seller or buyer, or any particular property where the existence of the LID
8
9 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
10
11 explained that the property has not increased rental rates or revenue due to the forthcoming
12
13 LID Improvements, because, among other reasons (and apart from COVID), the
14
15 improvements ABS believes will generate value do not exist, and will not for a number of
16
17 years to come. There are no comparable sales because the LID Improvements are not in
18
19 place, nor will they be until the end of 2024 if completed on schedule.

20 78. The fair market value of Taxpayer’s property has not changed due to
21
22 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
23
24 benefited from installation of new water main and fire hydrant where it was already
25
26 adequately supplied with water and afforded adequate fire protection). And in any event,
27
28 any value attributable to removal of the viaduct was to be excluded from the assessment
29
30 calculation.

31 79. There is no special benefit because LID improvements in fact diminish the
32
33 value of Taxpayer’s property by drawing visitors away towards improvements that do not
34
35 abut the property. *See Kusky*, 85 Wn. App. 493 (testimony of owners’ expert that LID
36
37 actually diminished value of property was sufficient to rebut presumption that assessment
38
39 was proper).

40 80. Moreover, the assessment formula is an attempt to distribute costs that do not
41
42 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
43
44 “merely a mathematical model that distributes costs”).
45
46
47

1 81. The Special Benefit Study fails to address whether the \$346,000,000
2
3 estimated LID project cost takes into account the investment that would have occurred in the
4
5 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
6
7 invested. This is a critical component of estimating which properties receive a direct benefit
8
9 from the improvements, versus more incidental benefits further from the park.

10 82. Assessments are disproportionate. Taxpayer also presented evidence
11
12 showing that the assessments are disproportionate. For example, the City disproportionately
13
14 assessed hotels a greater percentage of the cost of the Improvements even though there no
15
16 evidence that hotel properties will in fact benefit. And even within the hotels, the
17
18 assessments are disproportionate. Mr. Gordon testified that the differences between the
19
20 special benefit increases for the Hyatt at Olive 8, the Grand Hyatt, and Hyatt Regency—
21
22 which are all very close together—made little sense and raised doubts as to proportionality.

23 83. Mr. Macaulay also included personal property in his valuation of hotels even
24
25 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
26
27 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
28
29 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
30
31 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
32
33 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
34
35 receiving a disproportionately high LID assessment in comparison to other property types,
36
37 since hotels were the only property type subject to personal property LID assessments.
38
39 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
40
41 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
42
43 notice procedures because hotel property owners only received notice that their real estate
44
45 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
46
47

1 84. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
2 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
3 a television at the waterfront Marriott is assigned a greater special benefit than the same
4 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
5 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
6 unreasonable to assign a value lift to personal property that is replaceable at the same cost
7 and may be obsolete before the LID improvements are even completed. *See* Second Decl. of
8 Shorette ISO Closing Stmt., ¶ 7 (dated 7/7/2020). Further, personal property is highly
9 depreciable, and likely to be fully depreciated or potentially discarded by 2024. *Id.*; *see also*
10 Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must be redone to correct
11 for this error.
12

13 85. The only evidence the City provided specific to this property was to rebut
14 Mr. Gordon's "Before" valuation. But the Hearing Examiner has already found that Mr.
15 Gordon's valuation is more reliable. The remainder of the City's evidence and testimony
16 regarding this property provides general responses which have already been rebutted by
17 Objectors in their case-in-chief and cross-examination. Second Decl. of Bird, at ¶¶ 104-109
18 (dated 6/26/2020).
19

20 86. The proposed final assessment substantially exceeds the special benefit to the
21 property and is grossly disproportionate to similarly situated properties within the LID. For
22 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
23 Sections II.17, II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.10.
24

25 **State Environmental Policy Act and Other Environmental Permitting**
26

27 87. While this appeal is not challenging the City's environmental review and
28 permitting processes, those processes are relevant in determining the legality of the
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 assessments, and to assessing the delivery risk, the present value of the City's plans, and
2 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
3 pursue projects that have not yet undergone environmental review (thus limiting the choice
4 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
5 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
6 is just beginning. Further, the City has segmented environmental review, and still has a
7 gauntlet of federal, state and tribal review processes to complete before it will be clear what
8 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
9 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
10 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
11 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
12 committing to reconstruction of Pier 58 and major street improvements without
13 environmental review, or the City's Final Special Study has improperly included and is
14 proposing to assess the Taxpayer the costs and special benefits of improvements that may
15 not get built. Either way, it is faulty process.

30 **Due Process Rights**

31
32 88. The City's failed to notify Taxpayer sufficiently in advance of the hearing to
33 allow Taxpayer to obtain evidence and prepare to properly challenge the assessments.
34 Because LID assessments involve a deprivation of property, affected owners have the right
35 to a hearing as to whether the improvement resulted (or will result) in special benefits to
36 their properties and whether their assessments are proportionate, which necessarily includes
37 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
38 555, 569–70, 229 P.3d 761 (2010).
39
40
41
42
43
44
45
46
47

1 89. The LID statute specifies that cities must mail notices giving the time and
2 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
3 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
4 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
5 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
6 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
7 secure their own appraisal), evaluate proportionality of the proposed assessments, and
8 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
9 for anybody to get an appraisal”).

10 90. The City’s Notice of Assessment was sent on December 30, 2019. And the
11 Final Special Benefit Study has only been available for public review since January 7, 2020.
12 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
13 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
14 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
15 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
16 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
17 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
18 the Examiner’s Recommendation: I.B.

19
20
21

32
33
34
35
36
37 **VII. Relief Requested**

38 Taxpayer respectfully requests that the City Council:

39 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
40 assessment dated December 30, 2019; or
41
42
43
44
45
46
47

- 1 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
2
3 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the
4
5 hearing in this matter; or
6
7 3. Grant the Examiner's recommended remand but with instructions recalculate
8
9 and reduce Taxpayer's assessment using recognized appraisal techniques consistent with
10
11 USPAP and;
12
13 4. Award costs and attorney fees to Taxpayer/Appellant pursuant to 42 U.S.C. §
14
15 1988; and
16
17 a. Excluding any property value increase attributable to viaduct removal and
18
19 other planned WSDOT Improvements;
20
21 b. Excluding any value attributable to personal property;
22
23 c. Taking into account the effects of the COVID-19 pandemic on the value of
24
25 Taxpayer's property and other relevant developments since October 2019;
26
27 d. Accounting for and excluding (1) any special benefits from existing or
28
29 planned improvements that already provide similar benefits to Taxpayer's
30
31 property, and (2) any special detriments from construction and other
32
33 anticipated LID-related disamenities;
34
35 e. Accounting for and including only those actual benefits anticipated to accrue
36
37 to Taxpayer's property based on its location relative to Pier 58, Overlook
38
39 Walk, and the Promenade, and specific elements of the LID Improvements;
40
41 f. Discounting anticipated special benefits to present value, based on reliable
42
43 estimates regarding when special benefits will start accruing following
44
45 completion of the LID Improvements; and
46
47

1 g. Accounting for such other issues specific to Taxpayer's property relevant to
2 calculation of such assessment; and
3

4
5 3. Grant such further relief as the City Council deems just and proper.

24
25
26 **III. Statement of Hedreen Hotel LLC's Interest and Incorporation of Prior**
27 **Arguments**

28
29 HEDREEN HOTEL LLC is the taxpayer for the properties that are subject to the
30 proposed final assessment described in Section IV.

31
32 Hedreen Hotel LLC is amending its appeal as authorized in City of Seattle
33 Resolution 31979 to include additional arguments relevant to the revised Final
34
35 Recommendations of the Hearing Examiner issued on February 1, 2021. On February 4,
36
37 2020, Hedreen Hotel LLC timely filed an objection to the assessment, which was based on
38
39 the Final Study. Hedreen Hotel LLC further timely filed an appeal of the Hearing
40
41 Examiner's 2020 recommendations to the City Council. Hedreen Hotel LLC maintains and
42
43 incorporates all objections and arguments raised in its appeal filed with the City Clerk on
44
45 September 22, 2020. This amendment is a supplement is to be read together with Hedreen
46
47

1 Hotel LLC's appeal filed on September 22, 2020. Hedreen Hotel LLC incorporates by
2 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
3 as authorized by the Hearing Examiner, including without limitation all records pertaining to
4 the November 2020 through February 2021 remand hearing ordered by Council.
5
6
7

8
9 **IV. Amended Arguments on Appeal**

10 HEDREEN HOTEL LLC supplements its appeal of the Hearing Examiner's
11 recommendation to deny in part and revise on remand in part Hedreen Hotel LLC's
12 objection to the City of Seattle's Waterfront Local Improvement District No. 6751 proposed
13 final assessment dated December 30, 2019 against the following property:
14
15
16
17

18 King County Parcel No. 6195000030 and 6792120010
19 Site Address: 700 Pike St. Seattle, Washington
20 Proposed Final LID Assessment for Parcels: \$1306335¹
21
22

23 To avoid repetition, Hedreen Hotel LLC incorporates the evidence and arguments
24 raised before the Hearing Examiner and before the City in its September 22, 2020 appeal,
25 into this amended appeal.
26
27
28

29
30 **A. The Anticipated Special Benefits to Hedreen Hotel LLC's Property**
31 **should be Discounted to Present Value and Assessments Adjusted as**
32 **Appropriate**
33

34 On remand, the City's appraiser acknowledged that special benefits to parcels can be
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
37 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
38 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
39 the theatre parcel is too remotely to support a current assessment. *Id.* The Examiner
40
41
42
43
44
45

46 ¹ The City has combined these parcels for purposes of a single appraisal and estimated
47 special benefit assessment.

1 accepted that recommendation. The City’s appraiser further acknowledged that benefit
2 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
3 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
4 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
5 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
6 calculations to present value because the general benefits are not anticipated from the LID
7 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
8 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
9 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
10 benefit calculation, and related assessments, to account for the delay between the assessment
11 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
12 standard appraisal practice, and renders the other proposed Waterfront LID special
13 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
14 “fundamentally wrong methods.”

15 All special benefit taxes assessed by a municipality must be based on “actual,
16 physical and material [special benefits that are] not merely speculative or conjectural.”
17 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).

18 Additionally, the assessments may not materially exceed the actual special benefit conferred
19 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
20 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
21 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
22 discount benefits the City estimated would accrue to the properties from improvements to be
23 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
24 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)

1 property while treating all or most others (including Taxpayer's) differently, and
2
3 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
4
5 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
6
7 for some properties because the benefit are too distant, while assessing other properties as
8
9 though distant benefits have already been secured. As Taxpayer identified in its September
10
11 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
12
13 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
14
15 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
16
17 reject the improper calculation of the benefit or remand and require the appraiser to discount
18
19 the benefits to net present value.
20

21 **B. The City's Appraiser's Disregard of Hotel STR Report Performance**
22 **Data is Another Example of How His Analysis is Unreliable, Not**
23 **Admissible under Frye or ER 702, and His Proposed Special**
24 **Assessments are not based on Actual, Measurable and Special Value**
25 **Increases from the anticipated LID Improvements.**
26

27 The City's appraiser was provided actual performance data for the remanded hotels,
28
29 including their average daily room rates, from which he had been instructed to "recalculate"
30
31 hotel "before" values on remand. *See* Hearing Examiner Initial Recommendation at p. 117
32
33 (Sept. 8, 2020). The appraiser refused, explaining that, had he done so, his before values
34
35 would be "too low." Instead, he divined an alternative value from "comparable sales", and
36
37 then worked backwards to calculate small adjustments to his average daily room rate
38
39 assumptions, substituting them in his "income spreadsheets," and thereby correlating his
40
41 income analysis to his preconceived value estimate. His remand analysis demonstrates that
42
43 his whole "income approach to valuation", used for both hotels and other commercial
44
45 properties, is contrived speculation on speculation. The City's appraiser disregarded these
46
47 hotels' actual net income in a supposed "income analysis." *See e.g.*, Deposition of Robert J.

1 Macaulay, 7:10-13 (December 22, 2020) (Attached as Exhibit A to Objector's Statement on
2
3 Remand for Case Nos. CWF-0318, 0413, 0415, 0417, 0418, 0423, 0429, 0436). Taxpayer's
4
5 appraiser submitted an appraisal with room rates much closer to the actual performance of
6
7 the hotel and should be incorporated. *See* Declaration of John D. Gordon in City Council's
8
9 LID Remand, (Jan. 8, 2021).

10
11 For example, compare the room rate and valuation for the appraisals in the table
12
13 below, where the actual average daily room rate for 2019 was \$234. The Hedreen Hotel
14
15 LLC representative testified that the City Appraiser's assumed room rate was too high - it
16
17 not only had not been achieved, but even pre-Covid, was not reasonably achievable.
18
19

Grand Hyatt Hotel CWF-0436 and 0437	City's Revised Appraisal	Hedreen Hotel LLC's Appraisal
Hotel Value	\$228,902,000	\$175,300,000
Less Personal Property	\$6,900,000	\$6,900,000
Real Estate Value	\$222,002,000	\$168,400,000
Benefit Ratio	1.50%	1.50%
Special Benefit	\$3,333,000	\$2,528,000
Levy Ratio	39.19%	39.19%
LID Levy	\$1,306,335	\$990,824
Average Room Rate	\$345	\$240
Daily RevPAR	\$276	\$201

20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 To correct the "before value" alone, the City Council should instead adopt Hedreen
38
39 Hotel LLC's valuation, which was developed using actual data, and otherwise applying the
40
41 City appraiser's assessment formula:
42
43
44
45
46
47

Grand Hyatt Hotel CWF-0436 and 0437	Appraisal Amount
Hotel Value	\$119,527,000
Less Personal Property	\$3,300,000
Real Estate Value	\$116,227,000
Benefit Ratio	1.50%
Special Benefit	\$1,745,000
Levy Ratio	39.19%
LID Levy	\$683,935

The City's appraiser only slightly reduced his original values in ways that are still entirely inconsistent with historical performance data. The City's appraisal and analysis is speculative and should be rejected. The City Council should at least adopt Hedreen Hotel LLC's "before values" and resultant LID assessments.

C. In Light of Covid's Continuing Impact on Hedreen Hotel LLC and other Downtown Property Owners and other Material Changes Since October 2019, the LID Should be Cancelled, or at Least Assessments Recalculated, to take Into Account Property Value Reductions

In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e] into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and other relevant developments since October 2019." When Washington's first COVID restrictions were imposed in March and April 2020, there was an assumption that they would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover for another 5 years. Retail stores are boarded up. Homelessness and related challenges have gotten much worse. The City has already imposed higher minimum wages and taxes on businesses to try to fund recovery. The West Seattle Bridge and other bridges are in immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several

1 years from completion, as a best case. In current circumstances, a downtown tax to fund
2 new, non-essential park improvements against financially strapped taxpayers, and likely
3 passed through to financially strapped tenants and customers would be unfair to taxpayers
4 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
5 rethinks its budget priorities for the next few years, and its potentially funding sources,
6
7 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
8 property owners) have a chance to recover, and that any assessment take into account the
9 changed circumstances since this appeal process started on February 4, 2020 to avoid
10 unnecessarily and perhaps permanently killing downtown properties and businesses in the
11 name of bettering them.
12
13
14
15
16
17
18
19

20
21 **V. Relief Requested**

22 Particularly in light of the Committee's decision not to take further comment,
23 Hedreen Hotel LLC respectfully request that each Committee member carefully review the
24 record transmitted to Council before voting on our appeal.
25
26

27 HEDREEN HOTEL LLC respectfully reiterates its request from the September 22,
28 2020 appeal that the City Council:
29
30
31

- 32 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
33 assessment dated December 30, 2019; or
34
35
- 36 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
37 proposed final assessment to \$0 (zero), or such amount as Taxpayer
38 establishes at the hearing in this matter; or
39
40
- 41 3. Grant the Examiner's recommended remand but with instructions to
42 recalculate and reduce Taxpayer's assessment using recognized appraisal
43 techniques consistent with USPAP and
44
45
46
47

- 1 a. Excluding any property value increase attributable to viaduct removal
2 and other planned WSDOT Improvements;
3
4 b. Taking into account the effects of the COVID-19 pandemic on the
5 value of Taxpayer's property and other relevant developments since
6 October 2019;
7
8 c. Accounting for and excluding (1) any special benefits from existing
9 or planned improvements that already provide similar benefits to
10 Taxpayer's property, and (2) any special detriments from construction
11 and other anticipated LID-related disamenities;
12
13 d. Accounting for and including only those actual benefits anticipated to
14 accrue to Taxpayer's property based on its location relative to Pier 58,
15 Overlook Walk, and the Promenade, and specific elements of the LID
16 Improvements;
17
18 e. Discounting anticipated special benefits to present value, based on
19 reliable estimates regarding when special benefits will start accruing
20 following completion of the LID Improvements; and
21
22 f. Accounting for such other issues specific to Taxpayer's property
23 relevant to calculation of such assessment; and
24
25
26
27
28
29
30
31
32
33
34
35
36
37 4. Grant such further relief as the City Council deems just and proper.
38
39
40

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON HEDREEN
HOTEL LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NOS.
6195000030 and 6792120010

33
34 Hedreen Hotel LLC (“Taxpayer”) files this appeal pursuant to RCW 35.44.070,
35
36 Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice of the
37
38 Seattle Office of the City Clerk dated December 30, 2019, and the Hearing Examiner’s
39
40 Findings and Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).
41

42
43 **I. Taxpayer / Appellant**

44 The Taxpayer filing this appeal is:
45
46

28 Facsimile: 206.359.9000
29
30

31 **III. Statement of Taxpayer's Interest**

32 Hedreen Hotel LLC is the taxpayer for the properties that are subject to the proposed
33 final assessment described in Section IV. These parcels together are the Grand Hyatt
34 Seattle, a 30-story hotel containing 457 guest rooms and 25,000 square feet of meeting
35 space.¹
36
37
38
39
40
41
42
43
44

45 ¹ Mr. Gordon also explained that the building also includes a parking garage and retail space
46 which is a third parcel. But that is treated separately from the hotel in Case No. CWF-0438 (parcel
47 no. 6792120020).

1 The basis of the proposed assessment is a Final Special Benefit/Proportionate
2
3 Assessment Study for Waterfront Seattle Local Improvement District (“Final Study”), dated
4
5 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City’s
6
7 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
8
9 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
10
11 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
12
13 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
14
15 to exclude charges for other improvement projects in the Central Waterfront, and
16
17 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
18
19 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
20
21 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
22
23 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
24
25 because construction was not complete on the LID Improvements or the WSDOT
26
27 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
28
29 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
30
31 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
32
33 was based on the Final Study.

34 35 **IV. Matter Under Appeal**

36 Taxpayer appeals the Hearing Examiner’s recommendation to remand Taxpayer’s
37
38 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
39
40 final assessment dated December 30, 2019 against the following property:
41

42 King County Parcel No. 6195000030
43 Site Address: 700 Pike St. Seattle, Washington
44 Proposed Final LID Assessment for Parcel: \$985,276
45

46 *See* Examiner’s Recommendation at 61-62, 106.
47

1 Taxpayer also appeals the Hearing Examiner's recommendation to deny Taxpayer's
2 objection to the City of Seattle's Waterfront Local Improvement District No. 6751 proposed
3 final assessment dated December 30, 2019 against the following property:
4
5

6 King County Parcel No. 6792120010
7 Site Address: 700 Pike St. Seattle, Washington
8 Proposed Final LID Assessment for Parcel: \$422,541
9

10 See Examiner's Recommendation at 61-62, 106.
11

12 Hedreen Hotel LLC owns real parcel nos. 6195000030 and 6792120010, which are
13 located at 700 Pike Street, Seattle, Washington and are the subject of Case Nos. CWF-0436
14 and CWF-0437. These properties are condominium units housing the Grand Hyatt Seattle.
15 For county property tax purposes, the properties are valued as a unit with 70% of the value
16 assigned to parcel no. 6195000030 and 30% of the value assigned to parcel no. 6792120010.
17 See Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 7. As John Gordon explained, the reason
18 there are two different case numbers for this hotel is because ownership of the hotel was
19 divided into the common areas of the hotel and the tower that houses the guest rooms.
20 4/13/2020 Hrg. Tr. at 91:15-92:9. But for all intents and purposes, it is a single hotel. For
21 this reason, both Mr. Gordon and ABS Valuation treated both parcels as a single
22 consolidated entity. *Id.*; see also Attachment B (ABS Spreadsheet). For this reason alone,
23 Taxpayer appeals the Hearing Examiner's recommendation to deny appeal CWF-0437
24 which is also part of the Grand Hyatt hotel. These cases should be treated together—
25 consistent with the appraisers' valuation—and both should be remanded.
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40 To avoid repetition, Taxpayer incorporates the evidence and arguments raised before
41 the Hearing Examiner into this appeal. In particular, Taxpayer points the City Council to
42 Taxpayer's initial Appeal Petition, *Frye* motion, Closing Brief submitted at the close of its
43 case-in-chief (dated 4/16/2020), and supplemental Closing Statement submitted at the close
44
45
46
47

1 of the City's case-in-chief (dated 7/7/2020).² As discussed more fully below, Taxpayer
2 specifically appeals the following Findings and Recommendations in the Hearing
3 Examiner's September 8, 2020 Recommendation: Pages 61-62, 106, Sections II.6, II.7,
4 II.12, II.14, II.16, II.17, II.18, II.19, II.20, II.21, II.22, II.23, II.24, II.25, II.26, II.27, II.28,
5 II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7,
6 IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv),
7 IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.10, IV.C.11, IV.C.12, IV.C.14,
8 and IV.C.18.
9

10 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
11 recommendations on material issues raised during Taxpayer's appeal that were supported by
12 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
13 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
14 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
15 recommended anything other than denial of objectors' appeals were where the City's
16 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
17 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
18 special assessments based on "fundamentally wrong methods."
19

20 The special benefit for which special taxes are assessed must be "actual, physical and
21 material and not merely speculative or conjectural." *Heavens v. King Cty. Rural Library*
22

23 ² Because the City has not provided "metered index numbers," our appeals cannot reference
24 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
25 Public Works committee secure and provide appellants with such a record, so that the appeals can
26 then be supplemented with that additional information, so as to make the Committee's consideration
27 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
28 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
29 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
30 retained by Perkins Coie are part of this case file.
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
2 with the law, the assessments may not materially exceed the actual special benefit conferred
3 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
4 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
5 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
6 assessment. In this case, the proposed assessment fails each of the legal requirements for
7 special assessments and must be annulled as arbitrary or capricious, or founded on
8 fundamentally wrong methods.
9
10
11
12
13
14
15
16
17

18 **Legal Requirement:** Actual, non-speculative special benefit

19
20 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
21 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
22 October 2019 (they were not), and an “After” value purporting to assess the value of
23 properties with the LID improvements in place at least five years before anticipated
24 completion.
25
26

27 **Legal Requirement:** Cannot materially exceed the special benefit

28
29 **ABS Study:** ABS calculates a special benefit of \$2,512,671 for parcel no. 6195000030
30 and \$1,076,724 for parcel no. 6792120010 for a total of \$3,589,395, assuming the LID
31 Improvements were in place and providing benefit in October 2019. However, the LID
32 Improvements will not be completed until the end of 2024 if the City meets its current
33 schedule, and many of WSDOT’s alternative improvements will not be built. The present
34 value of future improvements deliverable in five years is significantly lower than the
35 current value of improvements that already exist. Further, ABS’s own materials show that
36 benefits may not accrue for at least five years after they are completed, in 2029. If the
37 hypothesized special benefits are discounted to present value, the assessments materially
38 exceed the hypothesized special benefits.
39
40
41

42 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID

43
44 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
45 prepared his Final Study in October 2019, and the City issued its preliminary roll in
46 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
47

1 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
2 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
3 and must be based on actual special benefits. While that does not mean ABS's appraisal
4 was wrong when completed, values and benefits need to be reanalyzed before assessments
5 are finalized in light of the unprecedented changes to the downtown real property market.
6

7
8 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
9 Assessment cannot include value attributable to future WSDOT Improvements.
10

11 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
12 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
13 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
14 the City's appraiser increased 2019 property market values as though WSDOT had
15 completed its work by 2019. The proposed assessment is against this hypothetical
16 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
17 higher than actual 2019 market values. The City is collecting an assessment against both
18 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
19 contravention of law and the City's promise not to impose an assessment based on the
20 value of viaduct demolition and the other components of WSDOT's planned work.
21
22

23
24 **Legal Requirement:** Benefits must be special, not general
25

26 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
27 due to the LID Improvements. However, the far-reaching and public nature of the
28 improvements make any benefit arising from them general—not special.
29

30
31 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
32 or conjectural"
33

34 **ABS Study:** Not only are the improvements not yet "physical or material," but
35 environmental review and permitting for the City's proposed LID Improvements is not
36 complete, and the LID improvements are not anticipated to be complete until the end of
37 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
38 a manner consistent the City's then-current proposals, which were in many respects merely
39 conceptual designs.
40
41

42 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
43
44

45 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
46 property (furniture, fixtures and equipment), but not personal property of other types of
47 property. It is not proportionate to assess against hotel personal property and not other

personal property. Further, personal property is moveable, the value does not depend on location, and is likely to be fully depreciated and perhaps removed before the LID Improvements are in place. (Note also that personal property accounts are separate, and the City gave no notice of any LID assessment against personal property. The Examiner should have reversed personal property assessments on that basis as well.)

Legal Requirement: Must comply with appraisal standards

ABS Study: ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until the Examiner admonished ABS, ABS even asserted its analysis was "confidential and proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The Final Study fails to meet basic standards for admissibility and must be remanded.

Legal Requirement: Actual and measurable special benefit

ABS Study: ABS's proposed assessments are assigned rather than measured, as demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based on a host of "micro-judgments" that are not supported by any documentation, nor capable of replication or quality assurance/quality control. The assessments are undocumented, unreliable, and not supported by empirical studies, data, or reports.

Legal Requirement: Actual and measurable special benefit—Park benefits must be supported by empirical evidence

ABS Study: Dr. John Crompton, the world's preeminent expert regarding the economic value of parks and other public amenities and on whom ABS purported to rely, testified that ABS had completely misapplied his work and dramatically overstated both the distance to which economic benefits might extend from the LID Improvements and the extent of any anticipated benefit within the potentially benefited area.

Legal Requirement: Actual special benefit—Must take into account potential disamenities

ABS Study: The appraiser ignores the negative value impact of five years or more of construction, as well as other potential disamenities associated with public places.

Legal Requirement: Cannot prematurely commit to build

1 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
2 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
3 are being imposed. But finalizing the roll is a commitment by the City to build the
4 improvements, which is a violation of legal process and commits the City to build things it
5 may not secure permission to build.
6

7
8 In addition to these general objections, there are property-specific issues raised by
9 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
10 statement below.
11
12

13
14 **V. Standard of Review**
15

16 “When considering the assessment roll, the city council sits ‘as a board of
17 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
18 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
19 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
20 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
21
22

23 The proposed assessments are presumed correct, “unless overcome by clear, cogent
24 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
25 than the heightened presumption of correctness on judicial appeal because “applying these
26 elevated standards at the municipal hearing would afford unwarranted deference to a report
27 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
28 presumption is not evidence and its efficacy is lost when the other party adduces credible
29 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
30 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
31 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
32 presented credible evidence showing that the City’s proposed assessment is arbitrary,
33 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 to the City to prove the assessments are actual, measurable, special, non-speculative and
2 proportionate. The City failed that burden.
3

4 **VI. Grounds for Appeal**

5 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
6 following grounds.
7

8 **Taxpayer Not Required to Provide A Special Benefit Study**

9
10 1. Contrary to the Examiner's findings and recommendations, there is no
11 requirement that experts or property owners provide an alternative special benefit
12 calculation under these circumstances—to do so would also require the same improper
13 speculation the City's expert engaged in, given the timing and information provided. *See*,
14 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
15 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
16 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
17 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
18 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
19 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
20 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
21 provided expert opinion showing that improvements actually diminished value of the
22 property). In fact, no independent evidence is required at all if, for example, objectors show
23 that the assessment was grounded on a fundamentally wrong basis due to an error in the
24 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
25 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
26 a property owner could simply point out that the square footage assumed in the City's
27 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
28
29
30
31
32
33
34
35
36
37
38
39

45
46
47

1 Examiner's Recommendation: Sections II.12, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8,
2 and IV.C.11.
3

4
5 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

6
7 2. RCW 35.43.040 provides cities and towns authority for ordering local
8 improvements and for levying and collecting special assessments "on property specially
9 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
10 upon all the property in accordance with the special benefits conferred thereon." RCW
11 35.44.010.
12
13
14

15
16 3. No analysis of general benefits. Special assessments have been "held valid
17 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
18 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
19 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
20 they are for the construction of local improvements that are appurtenant to specific land and
21 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
22
23
24

25 4. Taxpayer's property is not specially benefited by the LID Improvements.
26 The primary purpose and effect of the LID Improvements are to benefit "members of the
27 whole community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public
28 library is for the benefit of the members of the whole community individually and
29 collectively who may be served by it"). Mr. Macaulay's own chapter of the LID Manual
30 states clearly that appraisers should "[c]onsider general benefits as well as special benefits"
31 (Hrg. Exhibit 117 (LID Manual) at 58³) and he admits that "general benefits probably accrue
32
33
34
35
36
37
38
39
40
41
42
43

44 ³ "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
45 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
46 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
47 days of cross-examination of the City's witnesses (June 23, 25 and 26, 2020). For ease of reference,

1 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
2 that if an appraiser “identifies both general and special benefits, these benefits should be
3 clearly distinguished and explained, and only special benefits should be included in the
4 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6 183:4; P. Shorett January 30, 2020 Appraisal Review (attached to Appeal Petition) at
7 Attachment p. 15 (explaining the examples in the Final Study only provide information
8 about general benefits and Study does not use proper measure of analysis to show special
9 benefits).

10
11
12
13
14
15
16
17
18
19 5. It is undisputed that Mr. Macaulay did not analyze or measure general
20 benefits, including those arising from construction necessary to meet basic design standards.
21 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
22 construction costs related to meeting design standards which may be general benefits as
23 distinct from construction costs emanating from requirements of the LID project”). To the
24 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
25 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
26 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
27 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

28
29
30
31
32
33
34
35
36
37 6. LID Improvements not necessary. Unlike typical LID projects, the
38 Waterfront LID improvements are largely unnecessary to the functionality of any particular
39 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
40 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
41
42
43
44

45
46
47 Taxpayer has attached a master list of the hearing exhibits and evidence as Attachment A to this
appeal notice.

1 held invalid where owners would have benefitted equally from increase of only 9 feet);
2
3 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
4
5 intersection for new water main for hydrant held invalid because land was already afforded
6
7 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
8
9 not necessary to their hotel business, which caters primarily to business travelers attending
10
11 conventions and meetings and visiting Seattle companies. Hrg. Exhibit 114 (Decl. of Z.
12
13 Ahmed) at ¶¶ 57, 64, 65. For this reason, the Grand Hyatt does not expect the LID
14
15 Improvements to increase impact on demand for rooms or room rates. *Id.*

16
17 7. The fact that there is no case law differentiating between binary
18
19 improvements and parks does not change the law prohibiting assessments on properties
20
21 already adequately served by existing amenities. *See* Examiner's Recommendation at
22
23 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
24
25 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
26
27 reasoning excuse the City's failure to account for existing amenities as part of the special
28
29 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
30
31 the incremental effect of new park improvements on the value of properties, much like
32
33 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
34
35 (Crompton's Report) at 12-13.

36
37 8. To the extent benefits can be considered "special" as opposed to general, they
38
39 are nominal or nonexistent for many properties even in the Central Waterfront, which
40
41 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
42
43 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
44
45 change due to expansion of sewer service *near* owners' parcel which were already
46
47 connected). Even if the City could assess for a view change (and it has promised not to

1 assess for viaduct removal), the fair market value of Taxpayer's property has not changed
2 because the LID Improvements have not improved the property's waterfront view or access
3 to the waterfront, nor will they when the City anticipates completion in 2024. For these
4 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
5
6 Sections IV.C.3, IV.B.9, and IV.C.3.
7
8
9

10 9. No analysis of special detriments. The Final Study fails to properly account
11 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
12 owners for removal and cleanup of underground storage tanks discovered during the
13 improvement project). Although Mr. Macaulay claims he analyzed impacts on the City's
14 planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation
15 of how lost parking might be a detriment, and no property-specific parking analysis in any
16 of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg.
17 Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
18
19
20
21
22
23
24
25

26 10. Likewise, there was no analysis of the risks associated with disamenities such
27 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
28 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
29 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
30 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
31 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
32 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.⁴ And if
33
34
35
36
37
38
39
40
41
42
43
44

45 ⁴ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
2 the maintenance agreement. *Id.* at 13:4-14:2.

3
4
5 11. There was also no consideration of negative impacts from another four-plus
6 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
7 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
8 law allowing him to dismiss these actual, non-speculative impacts. Because future special
9 benefits calculations are inherently speculative, Washington's eminent domain statute
10 specifically allows condemnees to postpone special benefits assessments until improvements
11 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
12 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
13 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
14 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
15 Greenway, the Greenway district "significantly" lagged in value).
16

17
18 12. Meanwhile, Mr. Ahmed testified that the assessment is an immediate expense
19 for the Grand Hyatt that comes with no immediate increase in revenue, thereby decreasing
20 property values. *See* Hrg. Exhibit 114 (Decl. of Z. Ahmed), ¶¶ 65-67. Mr. Ahmed further
21 testified that the Grand Hyatt will receive no special benefit from the proposed
22 improvements, and in fact the property is more valuable without the proposed LID
23 improvements and the corresponding assessment. *Id.* For these reasons, Taxpayer appeals
24 the following portions of the Examiner's Recommendation: Sections II.25, IV.B.8, and
25 IV.B.9.
26

27
28 13. Special benefit estimate is speculative. When calculating a special benefit,
29 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
30 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp. 6097*, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4 14. Assuming without conceding that one day, the City’s planned LID
5 Improvements might increase the value of neighboring properties to some extent, that
6 potential benefit is many years away and speculative. While appraisers tolerate some degree
7 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
8 far too speculative to satisfy industry practices and standards. *See. e.g.*, 3/12/2020 (P.
9 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
10 the level of precision implied in the Final Study due to the size of the LID and use of
11 hypotheticals).
12
13
14
15
16
17
18
19

20 15. Although LIDs are sometimes finalized prior to completion of improvements,
21 this is typically just six month or a year prior, and the assessments are otherwise supported
22 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
23 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
26 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
27 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
28 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
29 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
30 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
31 market value would be as of the date the project would be finally constructed” because
32 “[t]here could be a lot of elements in the market that did occur between now and then that
33 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
2 fluctuate over time” and “I can’t predict the future”).

3
4 16. The record is clear that while no one can know what “special benefit” might
5 accrue to these properties in four years (if any), we do know that there are no actual benefits
6 now. The LID improvements provide no immediate special benefit to property owners
7 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
8 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
9 sewer system for future users). For example, notwithstanding the questionable hypothesis
10 that hotels will benefit from an expected increase in tourism (higher room rates or
11 occupancy) when the improvements are complete, it is undisputed that tourists are not
12 coming in larger numbers and paying higher room rates now because of something
13 happening five years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23.

14
15 17. Further, there are no “plans and specifications” on file with the Clerk’s Office
16 for the LID Improvements, and it is unlawful to move to final assessments without such
17 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
18 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
19 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
20 dollars on projects still early in the design process. *See* Washington Attorney General
21 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
22 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
23 of programs and included “only so much of the overall costs” that took place within and
24 benefitted the assessed properties).

25
26 18. The COVID-19 crisis highlights how fundamentally speculative and unfair it
27 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 anticipated to be delivered five years later. Even before COVID, it was speculative to
2
3 assume that market highs experienced in October 2019¹ would be sustained through 2024,
4
5 after an already extraordinarily long expansion period. *See, e.g.*, 3/3/2020 (A. Gibbons)
6
7 Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing
8
9 my analysis in October 2019, who would have thought that this COVID issue would
10
11 happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought
12
13 process was that the market was going to continue to go up”—in fact, it did not for
14
15 Taxpayer’s property. *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that
16
17 downtown hotel values had already dropped an estimated 10-15% from their October 2019
18
19 levels, and occupancy rates were at zero or in single digits. *See* Gordon Decl. (dated
20
21 4/21/2020) at ¶ 9. Hotels without guests will derive no benefit, special or otherwise, from
22
23 the planned LID Improvements. And even assuming hotels recover prior to 2024, there is
24
25 no basis for assuming that values hypothesized in October 2019 will remain relevant; they
26
27 are already irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020).
28
29 Although COVID does not change actual values as of October 2019 (*see* Examiner’s
30
31 Recommendation at 109), the pandemic has impacted *current* values and rendered the
32
33 hypothetical October 2019 Final Study valuations outdated.

34
35 19. As another example of how future events could affect the accuracy and
36
37 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
38
39 Examiner re-open the record to allow the City to explain whether the assessments against
40
41 property owners within the LID are, in fact, being used by the City to fund the emergency
42
43 dismantling and reconstruction of Pier 58.⁵ It has been reported that the City plans to use
44

45
46 ⁵ Associated Press, *Seattle mayor approves ‘emergency dismantling’ of waterfront Pier 58* (King
47 5, Aug. 15, 2020), available at <https://www.king5.com/article/news/local/seattle/seattle-mayor->

1 LID funding to pay for the expedited, emergency repairs and replacement.⁶ If true, the City
2 would be improperly imposing costs on property owners within the LID for improvements
3 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
4 habitat and City infrastructure—this does not provide any special benefit to LID property
5 owners.
6
7
8
9

10
11 20. There is also no certainty the improvements will be delivered on time. Mr.
12 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
13 delay in construction schedule would not constitute a “material change” under the City
14 Council’s ordinance authorizing the improvements. In other words, the City cannot
15 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
16 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
17 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
18 potential delays and project changes inherent in those processes, that call into question the
19 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
20 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
21 Decl., dated 4/15/2020).

43 [ry=EvGV09Syk1HCKYhwoN5Gqo5VpGOk5QBr3KFzTsfO4Lw=](https://www.govonlineaas.com/WA/WDFW/Public/EnSuite/Shared/pages/util/StreamDoc.ashx?query=EvGV09Syk1HCKYhwoN5Gqo5VpGOk5QBr3KFzTsfO4Lw=).
44

45 ⁶ Asia Fields, ‘Substantial’ pier shift closes Seattle’s Waterfront Park (Seattle Times, Aug. 8,
46 2020), *available at* [https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/)
47 [waterfront-park/](https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/).

1 21. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
2 he could not point to a single one where the assessment roll was finalized five years in
3 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
4 he has never recommended final special assessments based on designs less than 30 percent
5 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
6 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
7 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
8 at 66:17-25. He performed no independent due diligence to determine the reliability of the
9 City’s estimates for completion of the LID Improvements, or to ensure that proposed
10 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
11 agreed that if any of his assumptions are incorrect, his opinion of market value would need
12 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
13 68:11-18.

14 22. The City has cited no authority—and Taxpayer is aware of none—that
15 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
16 assess taxes for “actual” special benefits that will not accrue for another five years (if all
17 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
18 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
19 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
20 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
21 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
22 IV.C.14, and IV.C.18.

23 23. Failure to discount special benefit estimates to account for risks and present
24 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should

1 have accounted for risks associated with delivery of the improvements (including permitting
2 risk, construction risk, general economic risk) and any special damages associated with
3 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
4 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
5 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
6 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
7 the impact of future conditions [through] discounted cash flow analysis.”).
8
9
10
11
12
13

14 24. Mr. Macaulay acknowledged that appraisers can discount the value of a
15 future condition not in place at the date of valuation and can discount for the time value of
16 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
17 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
18 Discounting would also have been consistent with his approach for analyzing special
19 benefits to vacant land. He testified that the difference between similarly situated vacant
20 sites slated for development and already developed sites was that the labor, capital and risks
21 associated with development had not yet been borne for those vacant sites. Therefore, the
22 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
23 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
24 fully permitted, has not completed environmental review, and has not reached full design is
25 presently worth significantly less.
26
27
28
29
30
31
32
33
34
35
36
37

38 25. The City’s hotel expert, Mr. Lukens, likewise explained that to calculate
39 present value, an appraiser would consider discount rates for land development to account
40 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
41 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
42
43
44
45
46
47

1 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
2 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
3

4
5 26. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
6 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
7 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
8 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
9 ignoring momentarily all of the other methodological and other flaws discussed here and in
10 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
11 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
12 exceeds special benefits when reduced to present value. Further, to the extent the City is
13 arguing that because they are permitted to assess 100% of the special benefit, the special
14 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
15 is again wrong. After applying proper discounting, the City's proposed special benefit
16 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
17 100% of the total estimated special benefit.
18
19
20
21
22
23
24
25
26
27
28
29

30 27. But even the assumption that the LID improvements would deliver benefits
31 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
32 on. Rather, those studies demonstrate that a discount period of five years is conservative.
33 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
34 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
35 indicates that during the construction period, the Greenway district "significantly" lagged in
36 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
37 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
38 30-31 (discussing New York City High Line and San Francisco Embarcadero
39
40
41
42
43
44
45
46
47

1 improvements). Given the lengthy delay, any prediction of future special benefits is
2 speculative, especially during the construction phase where values are likely to decline.
3
4 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
5
6 Improvements take a similarly long period of time after they are complete to start producing
7
8 tangible property value benefits, each additional year of delay results in further discount to
9
10 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
11
12 A.
13

14
15 28. Applying the same discounting methods described above and in Mr. Gibbons
16
17 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
18
19 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
20
21 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
22
23 100% assessment should be no more than \$338,121. Anything more would permit the City
24
25 to assess Taxpayer based on a hypothetical assumption that these improvements are in place
26
27 and providing benefit, and ignore the risks, construction disamenity, and time value of
28
29 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
30
31 would counsel that the assessment should be only 39.2% of that assessment cap, or
32
33 \$132,543.
34

35 29. Attachment C includes two Excel spreadsheets applying these discounting
36
37 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
38
39 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
40
41 demonstrates that discounting the City's hypothetical October 2019 special benefits to
42
43 present value would reduce Taxpayer's assessment to \$483,004, exclusive of any other
44
45 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
46
47 reductions after taking into account: (1) Taxpayer's experts' estimated "Before" value based

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
5 the time it takes for the improvements to capture property value). After such reductions,
6
7 Taxpayer's assessment would be just \$297,421 (for the 5-year discount) or \$81,721 (for the
8
9 10-year discount). Further, the spreadsheet concludes a "zero" benefit for this property
10
11 because, based on Dr. Crompton's testimony, Taxpayer's property is more than 2,000 feet
12
13 from the core "park" improvements and therefore too distant to receive any special benefit.
14
15 Neither of these spreadsheets address other issues raised by Taxpayer's appeal, but are
16
17 intended to help demonstrate how unfair and inflated the City's proposed hypothetical
18
19 assessment is. The Hearing Examiner's Recommendation simply dismisses Taxpayer's
20
21 discounting argument without legal or factual analysis; that failure is error.
22
23

24 **Appraisal and Assessment Calculation Methods Are Flawed**

25
26 30. The "general rule is that each lot, piece, or parcel of land should be assessed
27
28 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
29
30 Wn.2d at 97.
31

32
33 31. It is proper to sustain a challenge to an assessment, even without the appraisal
34
35 testimony from the owner, where the objector's expert establishes that the assessment was
36
37 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
38
39 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
40

41 32. The City's appraiser purports to utilize the income method of valuation but
42
43 relied on inaccurate revenue and market data, as discussed further below.
44

45 33. The City's appraiser purports to utilize the comparable sales method of
46
47 valuation, but no City witness attempted "to characterize any one, or all of them, as

1 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
2 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
3 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
4 characterize any one, or all of them, as comparable to any particular property within the LID").
5 And no City witness could explain how specific adjustments were made to these sales to
6 account for value increases due to the hypothesized Before and After Improvements. For this
7 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
8

9
10
11
12
13
14
15 34. Special assessment improperly includes value lift from the Before
16 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
17 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
18 Improvements, which WSDOT had independently committed to fund. However, Mr.
19 Macaulay did not calculate the actual market value of LID properties in October 2019, and
20 did not separately analyze the hypothetical increase to property values attributable to
21 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
22 current value and then separately calculate a hypothetical "With WSDOT" Before value);
23 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
24 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
25 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
26 documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
27 occupancy and rates would have been for the commercial properties assuming all of the
28 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
29 outright omission precludes any independent evaluation of the true market "Before" values.
30 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
31 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
2 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
3
4 other road, pedestrian and landscaping improvements WSDOT had already committed to
5
6 make.
7

8
9 35. However, because Mr. Macaulay testified that he did include some WSDOT-
10 related value-lift in the “Before” values, it follows that part of the special assessment
11
12 improperly is based on value attributable to the WSDOT Improvements. As shown by
13
14 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
15
16 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
17
18 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
19
20 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
21
22 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
23
24 to properly exclude the value of Before Improvements from the assessments. For these
25
26 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
27
28 Sections II.16, II.19, II.29, and IV.B.11(a)(ii)
29

30
31 36. Special benefits were assigned rather than measured. Mr. Macaulay
32
33 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
34
35 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
36
37 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/3/2020 (A. Gibbons)
38
39 Hrg Tr. at 88:25-89:3; 90:8-91:13. Based on formulas in spreadsheets that Mr. Macaulay
40
41 used to analyze the commercial properties, Taxpayer’s experts concluded that Mr. Macaulay
42
43 based adjustments on hypothesized very small increases to property revenue and very small
44
45 reductions to cap rates to “calculate” an “After” value due to the coming 2024 LID
46
47

1 Improvements. Attachment B (ABS Spreadsheet). These series of micro adjustments were
2 based on “professional judgment” that are neither shown nor replicable.
3

4
5 37. For these reasons, Taxpayer appeals the following portions of the Examiner’s
6 Recommendation: Sections II.19 and IV.B.11(a)(iii).
7

8
9 38. Special benefit falls within margin of error. The Final Special Benefit Study
10 applies an estimated value enhancement of less than 4%, which is generally within the
11 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
12 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
13 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
14 of one another, this difference is considered reasonable as it falls within the standard margin
15 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
16 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay’s micro-special benefit
17 percentages fall far below that 5% margin, “there is no way of authenticating” such
18 incremental changes because “[m]arket forces completely obliterate any tiny little noise
19 factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
20 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25.
21 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
22 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
23 appraiser to discern the micro-value differences between hypothetical conditions that are so
24 similar (the WSDOT improvements compared to the LID improvements) “verges on being
25 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
26

27
28 39. Even if it were possible to accurately tease out such a miniscule hypothetical
29 value change due to improvements coming five years later, experts testified that there is no
30 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at
2
3 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 40. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 41. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁷ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 42. Special assessment is not supported by comparable studies, data or reports.
25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for the commercial properties, including Taxpayer’s
30 property. For example, although Mr. Macaulay stated that no single report or study was
31
32
33
34
35
36
37
38
39

40
41 ⁷ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
2 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
3 parcel-by-parcel analysis other than to say that the studies generally provided “some
4 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
5 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
6 similarities and differences between these improvements and the comparable parks he
7 looked at).

14 43. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
15 assignment of incremental increase of 0.5% to 4% to property values within the LID.
16 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
17 research misinterprets his work in critical ways, including because the LID Improvements
18 manifest the characteristics of a parkway (not a park), and his research indicates that most of
19 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
20 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
21 related value increases are in fact smaller; that estimated increases are “best guesses” rather
22 than predictions of property value increases in a particular city; and that percentages do not
23 account for diminishing returns after taking into account water views, which would be the
24 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
25 topography grants most properties in downtown a water view.

38 44. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
39 that this was just one source of information that was not entirely relevant because, among
40 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
41 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
42 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3 Crompton concluded that 500 feet via road from “park” improvements is just one or two
4 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
5 significantly beyond that which the park study indicated (even if it was legitimate to use the
6 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
7 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
8 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
9 Taxpayer’s property is even not within 2,000 road network feet from the “park”
10 improvements. *See* Hrg. Exhibits 104 (Ellen Kersten Decl.) at Ex. E, F; 114 (Decl. of Z.
11 Ahmed) at ¶ 63.

12
13 45. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
14 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
15 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
16 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
17 materials, it was clearly an important—if not *the* most important—source of information for
18 estimating special benefits (especially with respect to the condos).⁸ No City witness
19 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
20 parcel-by-parcel analysis.

44
45
46
47

⁸ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr. at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a park (or streetscape) improvement—other studies estimated premiums for real estate only much closer or cited to Dr. Crompton.

1 46. The destination parks discussed in the Final Special Benefit Study do not
2 provide reliable, comparable, and valid support for the calculation of special assessments
3 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
4 critique of every case study cited concludes the changes to those “dwarf the difference
5 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
6 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
7 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
8 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
9 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
10 funded by a LID. And in virtually all of those cases, the park improvements dramatically
11 restored unimproved or blighted areas, and properties evaluated were within two or three
12 blocks of the park.
13

14 47. ABS’s claimed reliance on three economic studies to support property value
15 increase is also flawed. The HR&A study does not inform what value increases are
16 expected from the LID Improvements because it projects increases to tourism from *all* of the
17 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
18 dissimilar parks in other cities,⁹ making the methodological application to the LID
19 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study’s
20 conclusion that there would be *no new net visitors* from downtown residents as a result of
21

22 ⁹ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
23 Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose
24 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
25 expected tourists visiting the LID park was calculated using data from only from New York City, a
26 notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to
27 increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to
28 how hotel visitors actually select hotels to stay in.
29

1 the LID Improvements and could not explain how this impacted his condo analysis.
2
3 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
4 Property Values” primarily focused on whether the benefits accrue to the larger community
5 rather than properties adjacent to the park. And the 2014 New York City Department of
6 Transportation study is not based on real estate transactions and market sales and fails to
7 substantiate any link between increased retail sales and property values. Moreover, this
8 study only looked at impact either directly abutting the streetscape improvement, or a couple
9 hundred feet for plaza-like improvements.
10

11
12 48. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
13 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
14 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
15 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
16 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
17 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
18 asked whether he considered that HR&A’s estimated LID impact is six times greater than
19 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
20 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
21 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
22 assumptions to account for this difference, which may be partly explained by the fact that
23 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
24 approximately 3.44% of King County tourists visit Seattle primarily because of the city
25 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
26 waterfront improvements.

40
41
42
43
44
45
46
47

1 49. Although proximity to the improvements is a key factor in all of these
2 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
3 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
4 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
5 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
6 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
7 Improvements is approximate 20 acres and it is not a community park.¹⁰

8 50. There is no explanation in the Final Study or the supporting materials of how
9 the studies or comparable sales were used to derive values for Taxpayer's property. For
10 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
11 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

12 51. Failure to comply with USPAP. Taxpayer's assessment also rests on a
13 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
14 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
15 recognized) for developing the MAI standards for mass appraisals, testified that the Final
16 Study does not meet mass appraisal standards nor allow for independent assessment of the
17 accuracy of Mr. Macauley's conclusions.

18 52. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
21 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
22

23 ¹⁰ *See*
24 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
25 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
26 connecting Seattle's central waterfront to downtown.").

1 testimony suggests that he incorrectly believed that the only difference between direct
2 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
3
4 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
5
6 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
7
8 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
9
10 Gordon uses in doing his limited restricted report”).
11

12
13 53. But the difference is not only in reporting—mass appraisal techniques must
14
15 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
16
17 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
18
19 parcel approach:

20
21 The mass appraisal technique is an appraisal method used to evaluate
22
23 a group of properties that are subject to similar market forces as of a
24
25 certain date through the use of market data, statistical analysis and
26
27 testing. As a result, the mass appraisal technique does not require or
28
29 involve analysis of each individual property’s specific data.
30

31
32 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
33

34
35 54. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
36
37 universe of properties as a given date using standard methodology, employing common data,
38
39 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
40
41 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
42
43 model” is “a mathematical expression of how supply and demand factors interact in a
44
45 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
46
47 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

1 55. Regardless of client direction, Mr. Macaulay is required to comply with
2
3 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
4
5 economically feasible because it would have taken “an incredible amount of time and cost”
6
7 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
8
9 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
10
11 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).

12 56. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
13
14 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
15
16 value, fails to calibrate the model structure to determine the contribution of the individual
17
18 characteristics affecting value, and does not review the mass appraisal results against actual
19
20 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
21
22 217:1;¹¹ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

23 57. Mr. Macaulay explained that factors like “aesthetic change in the area, the
24
25 proximity to the elements, the increase in market rent, market vacancy changes,
26
27 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
28
29 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
30
31
32

33
34 ¹¹ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
35 relationship between characteristics that affect value, and to calibrate that model to specify how
36 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
37 21). The purpose is to rationally determine what characteristics will create value, and by how much.
38 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
39 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
40 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
41 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
42 include explanation of the model specification, data requirements, calibration methods, and
43 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
44 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
45 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
46 Hrg. Tr. at 206:15-207:17.
47

1 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
2 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
3 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
4 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
5 were hypothetical, it was not possible to identify matched pair sales and no City witness
6 explained how ABS Valuation made adjustments to “comparable” sales in order to check
7 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
8 him to explain his model structure.
9

10
11 58. For these reasons, Taxpayer appeals the following portions of the Examiner’s
12 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
13 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
14 and appeals the Examiner’s denial of that motion.
15

16
17 59. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, the Grand
21 Hyatt is more than a 3/4 of a mile walk—more than 2,700 feet as a crow flies—from Pier 58
22 and the core “park” improvements. Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 63. And, as
23 described above, the special assessment is overstated because the Final Study makes no
24 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
25 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
26 improvements were not in in place—and, in fact, much of the waterfront is a construction
27 zone following removal of the viaduct and now Pier 58 demolition. Under these
28 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Mr. Macaulay at the very least should have discounted the special benefit estimates or
2 waited to perform the Study until the improvements were at least close to complete.
3

4 **Erroneous Pre-Improvement Valuation**

5
6 60. The proposed final assessment erroneously overstates the pre-improvement
7 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
8 benefit to the Taxpayer's property.
9

10
11
12 61. The City's Final Study was used to compute the proposed final assessment of
13 Taxpayer's property. The City's Study purportedly uses data from the King County
14 Department of Assessments,¹² but the pre-improvement valuation information in the Final
15 Study does not accurately reflect this data. For example, the City's Study values parcel
16 6195000030 at \$167,511,400 and parcel 6792120010 at \$71,781,600, for a total of
17 \$239,293,000 as of October 1, 2019. But the King County assessor determined the true and
18 fair value of the parcels at \$185,398,000 (\$129,778,600 and \$55,619,400, respectively),
19 valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's
20 valuation is 129% of King County's assessed value for both parcels. The Final Special
21 Benefit Study does not explain this difference—or any differences—between its pre-
22 improvement valuation and its supposed source for market data. For this reason, Taxpayer
23 appeals Section IV.C.11 of the Examiner's Recommendation.
24
25

26
27 62. Further, the City's analysis was based on unreliable market data. For the
28 hotels, Mr. Macaulay's decision to rely on inaccurate market data notably deviates from
29 standard appraisal practices because more reliable data in the form of STR reports are
30
31
32
33
34
35
36

37
38
39
40
41
42
43
44
45 ¹² See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet
46 (providing a "County Link" to the King County Department of Assessment's online "eReal
47 Property" search tool).

1 readily available. Examiner Recommendation at Section IV.C.10; 3/12/2020 (J. Gordon)
2
3 Hrg. Tr. at 196:5-197:12; 215:9-18. Without the STR reports or actual input from the hotels,
4
5 Mr. Macaulay's "Before" valuations are drastically overstated in large part because he relies
6
7 on publicly available "room rack rates" to estimate hotel income. *See id.* (J. Gordon) at
8
9 162:3-18; 170:16-171:13; 179:25-180:14; 192:15-22. As the Examiner found, "Mr. Gordon
10
11 is a specialist expert in appraising hotels and his expert opinion, in addition to the specific
12
13 information he relied on for that opinion, is superior to the opinion and supporting data of
14
15 the City in its valuation." Examiner's Recommendation at II.16. The Examiner concluded
16
17 that Mr. Gordon's valuations were more reliable "due to the specialist nature of Mr.
18
19 Gordon's background and the specificity of the valuation data upon which he relied"—
20
21 namely STR reports or actual revenue data from the hotel. *Id.* at IV.C.10. Therefore, "the
22
23 valuation of [this] property should be remanded for recalculation by the City appraiser based
24
25 on the information provided by [this] Objector." *Id.*

26
27 63. Specifically, the evidence and testimony presented showed that the actual
28
29 average daily room rate (ADR) for this property in 2019 was \$234. However, Mr. Macaulay
30
31 incorrectly estimated an ADR of \$355 for this property which is 51% higher than actual
32
33 ADR, far exceeds the most optimistic assumptions about future growth in hotel room rates
34
35 for the Grand Hyatt, and is not a reasonable assumption in valuing a hotel of this type in the
36
37 downtown Seattle market. In addition, the Grand Hyatt has significantly reduced operations
38
39 as a result of the COVID-19 outbreak.

40
41 64. Due to these errors alone, Mr. Macaulay artificially raised the property's
42
43 Before value; Mr. Gordon valued the property at \$168,400,000 (without personal property),
44
45 which is \$70,893,000 (or about 30%) less than ABS Valuation's estimate. Setting aside that
46
47 ABS Valuation's inclusion of personal property when valuing hotels is disproportionate and

1 flawed, Mr. Gordon's estimate of value including personal property is \$175,300,000, which
2 is still significantly lower than ABS Valuation's estimate (\$239,293,000). See Fourth Decl.
3 of Gordon, at ¶ 5 (dated 7/7/2020).
4

5
6 65. Taxpayer expects an opportunity to respond to the revised assessment once
7 that is provided (see Examiner's Recommendation at V) and appeals the remainder of
8 Section IV.C.10 of the Examiner's Recommendation rejecting Taxpayer's other bases for
9 reducing the assessment. For example, Taxpayer disagrees with the Examiner's conclusion
10 that one of the reasons Mr. Gordon's appraisals concludes a lower value for this property is
11 because he was not valuing the properties in the "Before" condition. Examiner's
12 Recommendation at Section II.16. This does not explain the 51% difference between ABS
13 Valuation's estimate and actual average room rates for the Grand Hyatt. Further, Mr.
14 Lukens—who reviewed ABS's valuation estimates for reasonableness—was not even aware
15 that the Before values were supposed to include the WSDOT Improvements. 6/26/2020
16 Hrg. Tr. at 165:2-166:22.
17
18

19 66. Thus, aside from multiple other reasons why computation of the special
20 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
21 improvement values that do not accurately reflect market data. For these reason, Taxpayer
22 appeals Section II.16 of the Examiner's Recommendation.
23
24

25 **Erroneous Computation of Special Benefit**

26 67. "Special benefit" is "the increase in fair market value attributable to the local
27 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
28 may receive by reason of the improvement is not measured alone by the physical character
29 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
30 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 the particular tract or property benefited by the entire improvement, and is it assessed
2 proportionately with the other property included within the assessment district?” *Id.* 165–
3
4 66.
5

6 68. The proposed final assessment erroneously overstates the special benefit of
7
8 LID improvements in a number of ways.
9

10 69. Overstated Before value led to overstated special benefit. ABS Valuation’s
11 overstated Before value resulted in an inflated special benefit estimate and assessment after
12
13 Mr. Macaulay made micro adjustments to “Before” revenue and capitalization rates to
14
15 calculate an After value. Mr. Macaulay conceded that using his methods and his
16
17 spreadsheets, changing the room rate alone would change the special assessment. 6/25/2020
18
19 Hrg. Tr. at 42:21-43:15 (explaining that changing the room rate will result in a different
20
21 assessment and the same is true for every hotel); *see also* 6/23/2020 Hrg. Tr. at 111:9-11,
22
23 132:12-133:10, 140:20-141:9. And he agreed that if Mr. Gordon’s numbers are accurate—
24
25 and there is no evidence they are not—then ABS would need to redo the appraisal for the
26
27 Grand Hyatt to determine if adjustments are needed. *See id.* 137:20-138:13.
28
29

30 70. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
31
32 the Grand Hyatt, Mr. Macaulay assumed room/rental rates would increase by 0.60% (low)
33
34 and 1.20% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is not
35
36 possible to accurately conclude that the reason for this level of percentage increase would be
37
38 due to the LID Improvements, and there appears to be no support for assignment of these
39
40 percentages. Based on formulas in the spreadsheets, Mr. Macaulay then uses these same
41
42 percentages (0.60% and 1.20%) to increase food and beverage revenue, and parking and
43
44 other income. He then uses this hypothesized increased revenue to calculate a new net
45
46
47

1 operating income for the commercial properties and capitalizes that to come up with an
2 “After” valuation.
3

4
5 71. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
6 operating income remains the same as in the hypothetical “Before” condition, but changes
7 the cap rate. For the Grand Hyatt, the cap rate goes from 7.25% to 7.11% (low scenario,
8 creating a bigger value increase) and 7.17% (high scenario, creating a lower value increase).
9 Mr. Gordon likewise explained that cap rate changes of 0.14% or 0.08% are not typically
10 measurable, and there appears to be no support for these changes in the Final Study or any
11 of its supporting materials.
12
13

14
15 72. Mr. Macaulay then averages his four “After” values to arrive at a final special
16 benefit conclusion. For the Grand Hyatt, this is an increase in property value of 1.50% due
17 to the LID Improvements.
18
19

20
21 73. Mr. Macaulay offered little justification for his micro adjustments to revenue
22 and capitalization rates. When asked precisely what the basis is for his special benefit
23 percentage increases to revenue for each commercial property, he could not point to
24 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
25 is nothing in the report to allow a reader to understand how he came up with these
26 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
27 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
28 the basis for his belief that certain factors—liked increased connectivity—will increase
29 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
30 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
31 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
32 sources equally even though there was no separate analysis done for food and beverage or
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
2 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
3 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
4 properties.
5
6

7
8 74. When asked the basis for making such adjustments for the hotels, Mr.
9 Macaulay pointed to “discussions with Mr. Lukens.” *Id.* at 116:5-19; 117:1-8; 126:3-7
10 (“Mr. Lukens helped significantly in that regard in helping, you know, look at probable
11 adjustments”). However, Mr. Lukens testified that he did not review the percentage
12 increases. *See* 6/25/2020 Hrg. Tr. at 170:24-172:20.¹³ And he did not review any work or
13 data to determine whether the revenue percentage adjustments in the spreadsheets were
14 reasonable, nor did he ever find them to be unreasonable or suggest any changes. *Id.* at
15 172:3-20. Instead, he appeared to be considering them for the first time on cross
16 examination, testifying that the adjustments “appear to be a kind of sensitivity analysis” and
17 “appear to be a very minor change.” *Id.* at 170:18-172:13. Likewise, he had no
18 understanding of what factors went into determining the change in capitalization rates in the
19 spreadsheets. *Id.* at 173:23-174:1. And he did not know how ABS Valuation reconciled the
20 four scenarios to come to final estimated special benefit. *Id.* at 174:22-175:4.
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38
39 ¹³ As another example of how arbitrary Mr. Macaulay’s methods are, he assigned different
40 special benefit and capitalization rate increases to the parking and retail parcels associated with the
41 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
42 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special
43 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
44 parcels). When asked whether this was a matter of coincidence, his answer was that is “just our
45 estimate of how the market would react.” 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
46 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
47 though it is one block closer to the waterfront.

1 75. Mr. Macaulay testified that he used comparable sales as a reasonableness
2 check for commercial properties. But as explained above, no City witness has explained
3 how anyone, or all, of the sales are comparable to any particular commercial property within
4 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
5 in order to make sales “comparable,” he would have had to make adjustments to account for
6 Before and After conditions, but there is no way to understand how adjustments were made
7 because he “didn’t do a separate sales comparison approach where we showed adjustments
8 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
9 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
10 *Id.* at 127:10-128:24.

21 76. It also bears noting that any “internal review” of the special benefit estimates
22 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
23 error. Indeed, given all the same information, he seemed to suggest that it would be
24 perfectly reasonable for another experienced appraiser to come up with special benefit
25 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
26 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
27 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
28 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
29 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
30 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
31 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
32 *Recommendation* at IV.B.4. Thus, the special assessment is not actual, measurable or
33 special because it is arbitrarily assigned; and it is too small to realistically be supported by
34 appraisal techniques.

1 77. No evidence of special benefit. Meanwhile, there is “no actual evidence from
2
3 any seller or purchaser that the price was higher because of the LID improvements.”
4
5 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
6
7 identified any seller or buyer, or any particular property where the existence of the LID
8
9 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
10
11 explained that the property has not increased rental rates or revenue due to the forthcoming
12
13 LID Improvements, because, among other reasons (and apart from COVID), the
14
15 improvements ABS believes will generate value do not exist, and will not for a number of
16
17 years to come. There are no comparable sales because the LID Improvements are not in
18
19 place, nor will they be until the end of 2024 if completed on schedule.

20 78. The fair market value of Taxpayer’s property has not changed due to
21
22 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
23
24 benefited from installation of new water main and fire hydrant where it was already
25
26 adequately supplied with water and afforded adequate fire protection). And in any event,
27
28 any value attributable to removal of the viaduct was to be excluded from the assessment
29
30 calculation.

31 79. There is no special benefit because LID improvements in fact diminish the
32
33 value of Taxpayer’s property by drawing visitors away towards improvements that do not
34
35 abut the property. *See Kusky*, 85 Wn. App. 493 (testimony of owners’ expert that LID
36
37 actually diminished value of property was sufficient to rebut presumption that assessment
38
39 was proper).

40 80. Moreover, the assessment formula is an attempt to distribute costs that do not
41
42 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
43
44 “merely a mathematical model that distributes costs”).
45
46
47

1 81. The Special Benefit Study fails to address whether the \$346,000,000
2
3 estimated LID project cost takes into account the investment that would have occurred in the
4
5 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
6
7 invested. This is a critical component of estimating which properties receive a direct benefit
8
9 from the improvements, versus more incidental benefits further from the park.

10 82. Assessments are disproportionate. Taxpayer also presented evidence
11
12 showing that the assessments are disproportionate. For example, the City disproportionately
13
14 assessed hotels a greater percentage of the cost of the Improvements even though there no
15
16 evidence that hotel properties will in fact benefit. And even within the hotels, the
17
18 assessments are disproportionate. Mr. Gordon testified that the differences between the
19
20 special benefit increases for the Hyatt at Olive 8, the Grand Hyatt, and Hyatt Regency—
21
22 which are all very close together—made little sense and raised doubts as to proportionality.
23

24 83. Mr. Macaulay also included personal property in his valuation of hotels even
25
26 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
27
28 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
29
30 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
31
32 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
33
34 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
35
36 receiving a disproportionately high LID assessment in comparison to other property types,
37
38 since hotels were the only property type subject to personal property LID assessments.
39
40 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
41
42 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
43
44 notice procedures because hotel property owners only received notice that their real estate
45
46 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
47

1 84. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
2 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
3 a television at the waterfront Marriott is assigned a greater special benefit than the same
4 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
5 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
6 unreasonable to assign a value lift to personal property that is replaceable at the same cost
7 and may be obsolete before the LID improvements are even completed. *See* Second Decl. of
8 Shorette ISO Closing Stmt., ¶ 7 (dated 7/7/2020). Further, personal property is highly
9 depreciable, and likely to be fully depreciated or potentially discarded by 2024. *Id.*; *see also*
10 Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must be redone to correct
11 for this error.
12

13 85. The only evidence the City provided specific to this property was to rebut
14 Mr. Gordon's "Before" valuation. But the Hearing Examiner has already found that Mr.
15 Gordon's valuation is more reliable. The remainder of the City's evidence and testimony
16 regarding this property provides general responses which have already been rebutted by
17 Objectors in their case-in-chief and cross-examination. Second Decl. of Bird, at ¶¶ 104-109
18 (dated 6/26/2020).
19

20 86. The proposed final assessment substantially exceeds the special benefit to the
21 property and is grossly disproportionate to similarly situated properties within the LID. For
22 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
23 Sections II.17, II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.10.
24

25 **State Environmental Policy Act and Other Environmental Permitting**
26

27 87. While this appeal is not challenging the City's environmental review and
28 permitting processes, those processes are relevant in determining the legality of the
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 assessments, and to assessing the delivery risk, the present value of the City's plans, and
2 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
3 pursue projects that have not yet undergone environmental review (thus limiting the choice
4 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
5 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
6 is just beginning. Further, the City has segmented environmental review, and still has a
7 gauntlet of federal, state and tribal review processes to complete before it will be clear what
8 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
9 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
10 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
11 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
12 committing to reconstruction of Pier 58 and major street improvements without
13 environmental review, or the City's Final Special Study has improperly included and is
14 proposing to assess the Taxpayer the costs and special benefits of improvements that may
15 not get built. Either way, it is faulty process.

30 **Due Process Rights**

31
32 88. The City's failed to notify Taxpayer sufficiently in advance of the hearing to
33 allow Taxpayer to obtain evidence and prepare to properly challenge the assessments.
34 Because LID assessments involve a deprivation of property, affected owners have the right
35 to a hearing as to whether the improvement resulted (or will result) in special benefits to
36 their properties and whether their assessments are proportionate, which necessarily includes
37 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
38 555, 569–70, 229 P.3d 761 (2010).
39
40
41
42
43
44
45
46
47

1 89. The LID statute specifies that cities must mail notices giving the time and
2 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
3 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
4 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
5 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
6 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
7 secure their own appraisal), evaluate proportionality of the proposed assessments, and
8 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
9 for anybody to get an appraisal”).

10 90. The City’s Notice of Assessment was sent on December 30, 2019. And the
11 Final Special Benefit Study has only been available for public review since January 7, 2020.
12 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
13 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
14 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
15 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
16 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
17 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
18 the Examiner’s Recommendation: I.B.

19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 **VII. Relief Requested**

38 Taxpayer respectfully requests that the City Council:

39 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
40 assessment dated December 30, 2019; or
41
42
43
44
45
46
47

- 1 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
2
3 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the
4
5 hearing in this matter; or
6
7 3. Grant the Examiner's recommended remand but with instructions recalculate
8
9 and reduce Taxpayer's assessment using recognized appraisal techniques consistent with
10
11 USPAP and;
12
13 4. Award costs and attorney fees to Taxpayer/Appellant pursuant to 42 U.S.C. §
14
15 1988; and
16
17 a. Excluding any property value increase attributable to viaduct removal and
18
19 other planned WSDOT Improvements;
20
21 b. Excluding any value attributable to personal property;
22
23 c. Taking into account the effects of the COVID-19 pandemic on the value of
24
25 Taxpayer's property and other relevant developments since October 2019;
26
27 d. Accounting for and excluding (1) any special benefits from existing or
28
29 planned improvements that already provide similar benefits to Taxpayer's
30
31 property, and (2) any special detriments from construction and other
32
33 anticipated LID-related disamenities;
34
35 e. Accounting for and including only those actual benefits anticipated to accrue
36
37 to Taxpayer's property based on its location relative to Pier 58, Overlook
38
39 Walk, and the Promenade, and specific elements of the LID Improvements;
40
41 f. Discounting anticipated special benefits to present value, based on reliable
42
43 estimates regarding when special benefits will start accruing following
44
45 completion of the LID Improvements; and
46
47

1 g. Accounting for such other issues specific to Taxpayer's property relevant to
2 calculation of such assessment; and
3

4
5 3. Grant such further relief as the City Council deems just and proper.
6

28
29 **III. Statement of Hedreen Hotel LLC's Interest and Incorporation of Prior Arguments**

30 HEDREEN HOTEL LLC is the taxpayer for the properties that are subject to the
31 proposed final assessment described in Section IV.

32 Hedreen Hotel LLC is amending its appeal as authorized in City of Seattle
33 Resolution 31979 to include additional arguments relevant to the revised Final
34 Recommendations of the Hearing Examiner issued on February 1, 2021. On February 4,
35 2020, Hedreen Hotel LLC timely filed an objection to the assessment, which was based on
36 the Final Study. Hedreen Hotel LLC further timely filed an appeal of the Hearing
37 Examiner's 2020 recommendations to the City Council. Hedreen Hotel LLC maintains and
38 incorporates all objections and arguments raised in its appeal filed with the City Clerk on
39 September 22, 2020. This amendment is a supplement is to be read together with Hedreen

1 Hotel LLC's appeal filed on September 22, 2020. Hedreen Hotel LLC incorporates by
2 reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner
3 as authorized by the Hearing Examiner, including without limitation all records pertaining to
4 the November 2020 through February 2021 remand hearing ordered by Council.
5
6
7

8
9 **IV. Amended Arguments on Appeal**

10 HEDREEN HOTEL LLC supplements its appeal of the Hearing Examiner's
11 recommendation to deny in part and revise on remand in part Hedreen Hotel LLC's
12 objection to the City of Seattle's Waterfront Local Improvement District No. 6751 proposed
13 final assessment dated December 30, 2019 against the following property:
14
15
16
17

18 King County Parcel No. 6195000030 and 6792120010
19 Site Address: 700 Pike St. Seattle, Washington
20 Proposed Final LID Assessment for Parcels: \$1306335¹
21
22

23 To avoid repetition, Hedreen Hotel LLC incorporates the evidence and arguments
24 raised before the Hearing Examiner and before the City in its September 22, 2020 appeal,
25 into this amended appeal.
26
27
28

29
30 **A. The Anticipated Special Benefits to Hedreen Hotel LLC's Property**
31 **should be Discounted to Present Value and Assessments Adjusted as**
32 **Appropriate**
33

34 On remand, the City's appraiser acknowledged that special benefits to parcels can be
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
37 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
38 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
39 the theatre parcel is too remotely to support a current assessment. *Id.* The Examiner
40
41
42
43
44
45

46 ¹ The City has combined these parcels for purposes of a single appraisal and estimated
47 special benefit assessment.

1 accepted that recommendation. The City’s appraiser further acknowledged that benefit
2 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
3 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
4 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
5 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
6 calculations to present value because the general benefits are not anticipated from the LID
7 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
8 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
9 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
10 benefit calculation, and related assessments, to account for the delay between the assessment
11 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
12 standard appraisal practice, and renders the other proposed Waterfront LID special
13 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
14 “fundamentally wrong methods.”

15 All special benefit taxes assessed by a municipality must be based on “actual,
16 physical and material [special benefits that are] not merely speculative or conjectural.”
17 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
18 Additionally, the assessments may not materially exceed the actual special benefit conferred
19 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
20 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
21 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
22 discount benefits the City estimated would accrue to the properties from improvements to be
23 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
24 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)

1 property while treating all or most others (including Taxpayer's) differently, and
2
3 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
4
5 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
6
7 for some properties because the benefit are too distant, while assessing other properties as
8
9 though distant benefits have already been secured. As Taxpayer identified in its September
10
11 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
12
13 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
14
15 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
16
17 reject the improper calculation of the benefit or remand and require the appraiser to discount
18
19 the benefits to net present value.
20

21 **B. The City's Appraiser's Disregard of Hotel STR Report Performance**
22 **Data is Another Example of How His Analysis is Unreliable, Not**
23 **Admissible under Frye or ER 702, and His Proposed Special**
24 **Assessments are not based on Actual, Measurable and Special Value**
25 **Increases from the anticipated LID Improvements.**
26

27 The City's appraiser was provided actual performance data for the remanded hotels,
28
29 including their average daily room rates, from which he had been instructed to "recalculate"
30
31 hotel "before" values on remand. *See* Hearing Examiner Initial Recommendation at p. 117
32
33 (Sept. 8, 2020). The appraiser refused, explaining that, had he done so, his before values
34
35 would be "too low." Instead, he divined an alternative value from "comparable sales", and
36
37 then worked backwards to calculate small adjustments to his average daily room rate
38
39 assumptions, substituting them in his "income spreadsheets," and thereby correlating his
40
41 income analysis to his preconceived value estimate. His remand analysis demonstrates that
42
43 his whole "income approach to valuation", used for both hotels and other commercial
44
45 properties, is contrived speculation on speculation. The City's appraiser disregarded these
46
47 hotels' actual net income in a supposed "income analysis." *See e.g.*, Deposition of Robert J.

1 Macaulay, 7:10-13 (December 22, 2020) (Attached as Exhibit A to Objector's Statement on
2 Remand for Case Nos. CWF-0318, 0413, 0415, 0417, 0418, 0423, 0429, 0436). Taxpayer's
3 appraiser submitted an appraisal with room rates much closer to the actual performance of
4 the hotel and should be incorporated. *See* Declaration of John D. Gordon in City Council's
5 LID Remand, (Jan. 8, 2021).
6
7
8
9

10 For example, compare the room rate and valuation for the appraisals in the table
11 below, where the actual average daily room rate for 2019 was \$234. The Hedreen Hotel
12 LLC representative testified that the City Appraiser's assumed room rate was too high - it
13 not only had not been achieved, but even pre-Covid, was not reasonably achievable.
14
15
16
17
18
19

Grand Hyatt Hotel CWF-0436 and 0437	City's Revised Appraisal	Hedreen Hotel LLC's Appraisal
Hotel Value	\$228,902,000	\$175,300,000
Less Personal Property	\$6,900,000	\$6,900,000
Real Estate Value	\$222,002,000	\$168,400,000
Benefit Ratio	1.50%	1.50%
Special Benefit	\$3,333,000	\$2,528,000
Levy Ratio	39.19%	39.19%
LID Levy	\$1,306,335	\$990,824
Average Room Rate	\$345	\$240
Daily RevPAR	\$276	\$201

20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 To correct the "before value" alone, the City Council should instead adopt Hedreen
38 Hotel LLC's valuation, which was developed using actual data, and otherwise applying the
39 City appraiser's assessment formula:
40
41
42
43
44
45
46
47

Grand Hyatt Hotel CWF-0436 and 0437	Appraisal Amount
Hotel Value	\$119,527,000
Less Personal Property	\$3,300,000
Real Estate Value	\$116,227,000
Benefit Ratio	1.50%
Special Benefit	\$1,745,000
Levy Ratio	39.19%
LID Levy	\$683,935

The City's appraiser only slightly reduced his original values in ways that are still entirely inconsistent with historical performance data. The City's appraisal and analysis is speculative and should be rejected. The City Council should at least adopt Hedreen Hotel LLC's "before values" and resultant LID assessments.

C. In Light of Covid's Continuing Impact on Hedreen Hotel LLC and other Downtown Property Owners and other Material Changes Since October 2019, the LID Should be Cancelled, or at Least Assessments Recalculated, to take Into Account Property Value Reductions

In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e] into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and other relevant developments since October 2019." When Washington's first COVID restrictions were imposed in March and April 2020, there was an assumption that they would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover for another 5 years. Retail stores are boarded up. Homelessness and related challenges have gotten much worse. The City has already imposed higher minimum wages and taxes on businesses to try to fund recovery. The West Seattle Bridge and other bridges are in immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several

1 years from completion, as a best case. In current circumstances, a downtown tax to fund
2 new, non-essential park improvements against financially strapped taxpayers, and likely
3 passed through to financially strapped tenants and customers would be unfair to taxpayers
4 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
5 rethinks its budget priorities for the next few years, and its potentially funding sources,
6
7 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
8 property owners) have a chance to recover, and that any assessment take into account the
9 changed circumstances since this appeal process started on February 4, 2020 to avoid
10 unnecessarily and perhaps permanently killing downtown properties and businesses in the
11 name of bettering them.
12
13
14
15
16
17
18
19

20
21 **V. Relief Requested**

22 Particularly in light of the Committee's decision not to take further comment,
23 Hedreen Hotel LLC respectfully request that each Committee member carefully review the
24 record transmitted to Council before voting on our appeal.
25
26

27 HEDREEN HOTEL LLC respectfully reiterates its request from the September 22,
28 2020 appeal that the City Council:
29
30
31

- 32 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
33 assessment dated December 30, 2019; or
34
- 35 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
36 proposed final assessment to \$0 (zero), or such amount as Taxpayer
37 establishes at the hearing in this matter; or
38
- 39 3. Grant the Examiner's recommended remand but with instructions to
40 recalculate and reduce Taxpayer's assessment using recognized appraisal
41 techniques consistent with USPAP and
42
43
44
45
46
47

- 1 a. Excluding any property value increase attributable to viaduct removal
2 and other planned WSDOT Improvements;
3
4
5 b. Taking into account the effects of the COVID-19 pandemic on the
6 value of Taxpayer's property and other relevant developments since
7 October 2019;
8
9
10 c. Accounting for and excluding (1) any special benefits from existing
11 or planned improvements that already provide similar benefits to
12 Taxpayer's property, and (2) any special detriments from construction
13 and other anticipated LID-related disamenities;
14
15
16 d. Accounting for and including only those actual benefits anticipated to
17 accrue to Taxpayer's property based on its location relative to Pier 58,
18 Overlook Walk, and the Promenade, and specific elements of the LID
19 Improvements;
20
21
22 e. Discounting anticipated special benefits to present value, based on
23 reliable estimates regarding when special benefits will start accruing
24 following completion of the LID Improvements; and
25
26
27 f. Accounting for such other issues specific to Taxpayer's property
28 relevant to calculation of such assessment; and
29
30
31
32
33
34
35
36
37 4. Grant such further relief as the City Council deems just and proper.
38
39
40
41
42
43
44
45

26 Facsimile: 206.359.9000
27

28 **III. Statement of Taxpayer's Interest**

29
30 7th & Pine LLC is the taxpayer for the property that is subject to the proposed final
31 assessment described in Section IV. This property is a condominium unit that contains the
32 retail and parking spaces in the building at 700 Pike Street that is also occupied by the Grand
33 Hyatt Seattle.
34

35 The basis of the proposed assessment is a Final Special Benefit/Proportionate
36 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
37 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
38 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
39
40
41
42
43
44
45
46
47

1 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
2 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4 to exclude charges for other improvement projects in the Central Waterfront, and
5 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
6 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
7 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
8 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
9 because construction was not complete on the LID Improvements or the WSDOT
10 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
11 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
12 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which
13 was based on the Final Study.
14

15 **IV. Matter Under Appeal**

16 Taxpayer appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
17 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
18 final assessment dated December 30, 2019 against the following property:
19

20 King County Parcel No. 6792120020
21 Site Address: 700 Pike St., Seattle, Washington
22 Proposed Final LID Assessment for Parcel: \$549,334
23

24 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
25 the evidence and arguments raised before the Hearing Examiner into this appeal. In
26 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
27 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
28

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4
5 As discussed more fully below, Taxpayer specifically appeals the following Findings
6 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
7
8 Pages 61-62, 106, Sections II.6, II.7, II.14, II.16, II.17, II.18, II.19, II.20, II.21, II.22, II.23,
9 II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3,
10 IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
11 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5, IV.C.8, IV.C.11,
12 IV.C.12, IV.C.14, and IV.C.18.
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38

39
40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$1,402,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” See Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
47

1 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
2 property (furniture, fixtures and equipment), but not personal property of other types of
3 property. It is not proportionate to assess against hotel personal property and not other
4 personal property. Further, personal property is moveable, the value does not depend on
5 location, and is likely to be fully depreciated and perhaps removed before the LID
6 Improvements are in place. (Note also that personal property accounts are separate, and
7 the City gave no notice of any LID assessment against personal property. The Examiner
8 should have reversed personal property assessments on that basis as well.)
9

10
11 **Legal Requirement:** Must comply with appraisal standards
12

13 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
14 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
15 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
16 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
17 Final Study fails to meet basic standards for admissibility and must be remanded.
18
19

20 **Legal Requirement:** Actual and measurable special benefit
21

22 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
23 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
24 on a host of "micro-judgments" that are not supported by any documentation, nor capable
25 of replication or quality assurance/quality control. The assessments are undocumented,
26 unreliable, and not supported by empirical studies, data, or reports.
27
28

29 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
30 supported by empirical evidence
31

32 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
33 value of parks and other public amenities and on whom ABS purported to rely, testified
34 that ABS had completely misapplied his work and dramatically overstated both the
35 distance to which economic benefits might extend from the LID Improvements and the
36 extent of any anticipated benefit within the potentially benefited area.
37
38

39 **Legal Requirement:** Actual special benefit—Must take into account potential
40 disamenities
41

42 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
43 construction, as well as other potential disamenities associated with public places.
44
45
46
47

1 **Legal Requirement:** Cannot prematurely commit to build

2
3 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
4 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
5 are being imposed. But finalizing the roll is a commitment by the City to build the
6 improvements, which is a violation of legal process and commits the City to build things it
7 may not secure permission to build.
8
9

10
11 In addition to these general objections, there are property-specific issues raised by
12 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
13 statement below.
14
15

16
17 **V. Standard of Review**

18
19 “When considering the assessment roll, the city council sits ‘as a board of
20 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
21 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
22 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
23 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
24
25

26
27 The proposed assessments are presumed correct, “unless overcome by clear, cogent
28 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
29 than the heightened presumption of correctness on judicial appeal because “applying these
30 elevated standards at the municipal hearing would afford unwarranted deference to a report
31 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
32 presumption is not evidence and its efficacy is lost when the other party adduces credible
33 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
34 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
35 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
36 presented credible evidence showing that the City’s proposed assessment is arbitrary,
37
38
39
40
41
42
43
44
45
46
47

1 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
2 to the City to prove the assessments are actual, measurable, special, non-speculative and
3 proportionate. The City failed that burden.
4

5 **VI. Grounds for Appeal**

6 Taxpayer appeals the Hearing Examiner's Findings and Recommendations on the
7 following grounds.
8

9 **Taxpayer Not Required to Provide A Special Benefit Study**

10 1. Contrary to the Examiner's findings and recommendations, there is no
11 requirement that experts or property owners provide an alternative special benefit
12 calculation under these circumstances—to do so would also require the same improper
13 speculation the City's expert engaged in, given the timing and information provided. *See*,
14 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
15 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
16 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
17 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
18 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
19 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
20 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
21 provided expert opinion showing that improvements actually diminished value of the
22 property). In fact, no independent evidence is required at all if, for example, objectors show
23 that the assessment was grounded on a fundamentally wrong basis due to an error in the
24 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
25 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
26 a property owner could simply point out that the square footage assumed in the City's
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
2 Examiner's Recommendation: Sections II.12, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8,
3 and IV.C.11.
4

5
6
7 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**
8

9 2. RCW 35.43.040 provides cities and towns authority for ordering local
10 improvements and for levying and collecting special assessments "on property specially
11 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
12 upon all the property in accordance with the special benefits conferred thereon." RCW
13 35.44.010.
14
15

16
17 3. No analysis of general benefits. Special assessments have been "held valid
18 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
19 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
20 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
21 they are for the construction of local improvements that are appurtenant to specific land and
22 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
23
24

25 4. Taxpayer's property is not specially benefited by the LID Improvements.
26 The primary purpose and effect of the LID Improvements are to benefit "members of the
27 whole community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public
28 library is for the benefit of the members of the whole community individually and
29 collectively who may be served by it"). Mr. Macaulay's own chapter of the LID Manual
30 states clearly that appraisers should "[c]onsider general benefits as well as special benefits"
31 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that "general benefits probably accrue

46 ² "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
47 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil

1 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
2 that if an appraiser “identifies both general and special benefits, these benefits should be
3 clearly distinguished and explained, and only special benefits should be included in the
4 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
5 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-
6 183:4. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
7 including those arising from construction necessary to meet basic design standards. *See*
8 Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
9 construction costs related to meeting design standards which may be general benefits as
10 distinct from construction costs emanating from requirements of the LID project”). To the
11 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
12 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
13 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
14 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

23
24
25
26
27
28
29 5. LID Improvements not necessary. Unlike typical LID projects, the
30 Waterfront LID improvements are largely unnecessary to the functionality of any particular
31 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33 held invalid where owners would have benefitted equally from increase of only 9 feet);
34 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
35 intersection for new water main for hydrant held invalid because land was already afforded

45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 functional hydrant at nearby street). Mr. Ahmed testified that the LID Improvements are not
2 necessary to the functionality or continued use of this property by our tenants as a retail
3 space or a parking garage. Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 73.
4

5
6 6. The fact that there is no case law differentiating between binary
7 improvements and parks does not change the law prohibiting assessments on properties
8 already adequately served by existing amenities. See Examiner's Recommendation at
9 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
10 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
11 reasoning excuse the City's failure to account for existing amenities as part of the special
12 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
13 the incremental effect of new park improvements on the value of properties, much like
14 turning on a weak light in an already brightly illuminated room. See Hrg. Exhibit 94
15 (Crompton's Report) at 12-13.
16

17 7. To the extent benefits can be considered "special" as opposed to general, they
18 are nominal or nonexistent for many properties even in the Central Waterfront, which
19 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
20 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
21 change due to expansion of sewer service *near* owners' parcel which were already
22 connected). Even if the City could assess for a view change (and it has promised not to
23 assess for viaduct removal), the fair market value of Taxpayer's property has not changed
24 because the LID Improvements have not improved the property's waterfront view or access
25 to the waterfront, nor will they when the City anticipates completion in 2024. For these
26 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
27 Sections IV.C.3, IV.B.9, and IV.C.3.

43
44
45
46
47

1 8. No analysis of special detriments. The Final Study fails to properly account
2 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
3 owners for removal and cleanup of underground storage tanks discovered during the
4 improvement project). Although Mr. Macaulay claims he analyzed impacts on the City's
5 planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation
6 of how lost parking might be a detriment, and no property-specific parking analysis in any
7 of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12; *see also* 6/26/2020 Hrg.
8 Tr. at 153:18-154:19 (did not actually analyze impact of decreased parking on condos).
9

10 9. Likewise, there was no analysis of the risks associated with disamenities such
11 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
12 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
13 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
14 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
15 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
16 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
17 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
18 the maintenance agreement. *Id.* at 13:4-14:2.
19

20 10. There was also no consideration of negative impacts from another four-plus
21 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
22 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
23 law allowing him to dismiss these actual, non-speculative impacts. Because future special

30
31
32
33
34

35
36
37
38
39
40
41
42
43
44
45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 benefits calculations are inherently speculative, Washington’s eminent domain statute
2 specifically allows condemnees to postpone special benefits assessments until improvements
3 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
4

5
6 Moreover, the studies that Mr. Macualay relied on demonstrate that construction disamenity
7 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
8 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
9 Greenway, the Greenway district “significantly” lagged in value).
10
11

12
13 11. Meanwhile, Mr. Ahmed testified that the assessment is an immediate expense
14 for this property that comes with no immediate increase in revenue, thereby decreasing
15 property values. *See* Hrg. Exhibit 114 (Decl. of Z. Ahmed), ¶ 74. Mr. Ahmed explained
16 that a restaurant, retailer, or parking garage operator will not be able to charge more or
17 attract more customers because of proposed future improvements located almost 3/4 of a
18 mile away. *Id.* In fact, if the City is correct and the improvements, when constructed, attract
19 visitors to the waterfront, the tenants at this property may see a decrease in business as
20 visitors patronize businesses nearer the waterfront. *Id.* Accordingly, Mr. Ahmed further
21 testified that the property is more valuable without the proposed LID improvements and the
22 corresponding assessment. *Id.*, ¶¶ 75, 76. For these reasons, Taxpayer appeals the
23 following portions of the Examiner’s Recommendation: Sections II.25, IV.B.8, and IV.B.9.
24
25

26
27 12. Special benefit estimate is speculative. When calculating a special benefit,
28 “[f]air market value cannot include a speculative value.” *Bellevue Plaza, Inc.*, 121 Wn.2d at
29 411. “When an appraiser uses a factor ‘beyond the knowledge of reasonable certainty’, it
30 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
31 P.2d 1078 (1958)).
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 13. Assuming without conceding that one day, the City's planned LID
2
3 Improvements might increase the value of neighboring properties to some extent, that
4
5 potential benefit is many years away and speculative. While appraisers tolerate some degree
6
7 of estimation and judgment, Taxpayer's expert testified that Mr. Macaulay's Final Study is
8
9 far too speculative to satisfy industry practices and standards. *See. e.g.,* 3/12/2020 (P.
10
11 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
12
13 the level of precision implied in the Final Study due to the size of the LID and use of
14
15 hypotheticals).

16 14. Although LIDs are sometimes finalized prior to completion of improvements,
17
18 this is typically just six month or a year prior, and the assessments are otherwise supported
19
20 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
21
22 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
23
24 will not be realized for four or five years. In the meantime, there is permitting risk,
25
26 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
27
28 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
29
30 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
31
32 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
33
34 there is inherent uncertainty in valuing the future delivery of projects because "we can't read
35
36 the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: "I just don't know what the
37
38 market value would be as of the date the project would be finally constructed" because
39
40 "[t]here could be a lot of elements in the market that did occur between now and then that
41
42 impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
43
44 his estimates will be higher or lower than comparable sales in 2024 because "markets tend to
45
46 fluctuate over time" and "I can't predict the future").
47

1 15. The record is clear that while no one can know what “special benefit” might
2
3 accrue to these properties in four years (if any), we do know that there are no actual benefits
4
5 now. The LID improvements provide no immediate special benefit to property owners
6
7 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
8
9 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
10
11 sewer system for future users).

12 16. Further, there are no “plans and specifications” on file with the Clerk’s Office
13
14 for the LID Improvements, and it is unlawful to move to final assessments without such
15
16 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
17
18 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
19
20 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
21
22 dollars on projects still early in the design process. *See* Washington Attorney General
23
24 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
25
26 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
27
28 of programs and included “only so much of the overall costs” that took place within and
29
30 benefitted the assessed properties).

31 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
32
33 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
34
35 anticipated to be delivered five years later. Even before COVID, it was speculative to
36
37 assume that market highs experienced in October 2019¹ would be sustained through 2024,
38
39 after an already extraordinarily long expansion period. *See, e.g.,* 3/3/2020 (A. Gibbons)
40
41 Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing
42
43 my analysis in October 2019, who would have thought that this COVID issue would
44
45 happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought
46
47

1 process was that the market was going to continue to go up.” But there is no basis for
2 assuming that values hypothesized in October 2019 will remain relevant; they are already
3 irrelevant. *See* Gibbons Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Although
4
5 COVID does not change actual values as of October 2019 (*see* Examiner’s
6
7 Recommendation at 109), the pandemic has impacted *current* values and rendered the
8
9 hypothetical October 2019 Final Study valuations outdated.
10
11

12
13 18. As another example of how future events could affect the accuracy and
14 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
15 Examiner re-open the record to allow the City to explain whether the assessments against
16
17 property owners within the LID are, in fact, being used by the City to fund the emergency
18
19 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
20
21 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
22
23 would be improperly imposing costs on property owners within the LID for improvements
24
25 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
26
27 habitat and City infrastructure—this does not provide any special benefit to LID property
28
29 owners.

46 2020), available at <https://www.seattletimes.com/seattle-news/substantial-pier-shift-closes-seattles-waterfront-park/>.
47

1 19. There is also no certainty the improvements will be delivered on time. Mr.
2
3 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
4
5 delay in construction schedule would not constitute a “material change” under the City
6
7 Council’s ordinance authorizing the improvements. In other words, the City cannot
8
9 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
10
11 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
12
13 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
14
15 potential delays and project changes inherent in those processes, that call into question the
16
17 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
18
19 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
20
21 Decl., dated 4/15/2020).

22 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
23
24 he could not point to a single one where the assessment roll was finalized five years in
25
26 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
27
28 he has never recommended final special assessments based on designs less than 30 percent
29
30 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
31
32 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
33
34 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
35
36 at 66:17-25. He performed no independent due diligence to determine the reliability of the
37
38 City’s estimates for completion of the LID Improvements, or to ensure that proposed
39
40 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
41
42 agreed that if any of his assumptions are incorrect, his opinion of market value would need
43
44 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
45
46 68:11-18.
47

1 21. The City has cited no authority—and Taxpayer is aware of none—that
2 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
3 assess taxes for “actual” special benefits that will not accrue for another five years (if all
4 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
5 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
6 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
7 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
8 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
9 IV.C.14, and IV.C.18.

10 22. Failure to discount special benefit estimates to account for risks and present
11 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
12 have accounted for risks associated with delivery of the improvements (including permitting
13 risk, construction risk, general economic risk) and any special damages associated with
14 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
15 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
16 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
17 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
18 the impact of future conditions [through] discounted cash flow analysis.”).

19 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
20 future condition not in place at the date of valuation and can discount for the time value of
21 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
22 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.
23 Discounting would also have been consistent with his approach for analyzing special
24 benefits to vacant land. He testified that the difference between similarly situated vacant

1 sites slated for development and already developed sites was that the labor, capital and risks
2 associated with development had not yet been borne for those vacant sites. Therefore, the
3 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
4 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
5 fully permitted, has not completed environmental review, and has not reached full design is
6 presently worth significantly less.
7
8
9
10
11

12 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
13 present value, an appraiser would consider discount rates for land development to account
14 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
15 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
16 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
17 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
18
19
20
21
22
23
24

25 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
26 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
27 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
28 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
29 ignoring momentarily all of the other methodological and other flaws discussed here and in
30 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
31 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
32 exceeds special benefits when reduced to present value. Further, to the extent the City is
33 arguing that because they are permitted to assess 100% of the special benefit, the special
34 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
35 is again wrong. After applying proper discounting, the City's proposed special benefit
36
37
38
39
40
41
42
43
44
45
46
47

1 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
2
3 100% of the total estimated special benefit.

4
5 26. But even the assumption that the LID improvements would deliver benefits
6
7 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
8
9 on. Rather, those studies demonstrate that a discount period of five years is conservative.
10
11 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A’s study
12
13 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay’s backup files)
14
15 indicates that during the construction period, the Greenway district “significantly” lagged in
16
17 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
18
19 “reorientation of development to capture value takes time”—specifically, 12-13 years. *Id.* at
20
21 30-31 (discussing New York City High Line and San Francisco Embarcadero
22
23 improvements). Given the lengthy delay, any prediction of future special benefits is
24
25 speculative, especially during the construction phase where values are likely to decline.
26
27 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
28
29 Improvements take a similarly long period of time after they are complete to start producing
30
31 tangible property value benefits, each additional year of delay results in further discount to
32
33 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
34
35 A.

36
37 27. Applying the same discounting methods described above and in Mr. Gibbons
38
39 declaration, the 2019 net present value of ABS’s estimate for benefits that actually start
40
41 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
42
43 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
44
45 100% assessment should be no more than \$132,068. Anything more would permit the City
46
47 to assess Taxpayer based on a hypothetical assumption that these improvements are in place

1 and providing benefit, and ignore the risks, construction disamenity, and time value of
2 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
3 would counsel that the assessment should be only 39.2% of that assessment cap, or \$51,770.
4
5

6 28. Attachment C includes two Excel spreadsheets applying these discounting
7 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
8 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
9 demonstrates that discounting the City's hypothetical October 2019 special benefits to
10 present value would reduce Taxpayer's assessment to \$188,470, exclusive of any other
11 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
12 reductions after taking into account: (1) a rough discount for property value loss due to
13 COVID-19; and (2) discounting to present value for 5 years (*i.e.*, from 2024 when the City
14 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
15 the time it takes for the improvements to capture property value). After such reductions,
16 Taxpayer's assessment would be just \$169,911 (for the 5-year discount) or \$45,312 (for the
17 10-year discount). Further, the spreadsheet concludes a "zero" benefit for this property
18 because, based on Dr. Crompton's testimony, Taxpayer's property is more than 2,000 feet
19 from the core "park" improvements and therefore too distant to receive any special benefit.
20 Neither of these spreadsheets address other issues raised by Taxpayer's appeal, but are
21 intended to help demonstrate how unfair and inflated the City's proposed hypothetical
22 assessment is. The Hearing Examiner's Recommendation simply dismisses Taxpayer's
23 discounting argument without legal or factual analysis; that failure is error.
24
25

45
46
47

1 **Appraisal and Assessment Calculation Methods Are Flawed**

2 29. The “general rule is that each lot, piece, or parcel of land should be assessed
3 separately” for purposes of local improvement district special assessment. *Doolittle*, 114
4 Wn.2d at 97.
5
6

7
8 30. It is proper to sustain a challenge to an assessment, even without the appraisal
9 testimony from the owner, where the objector’s expert establishes that the assessment was
10 “clearly grounded upon a fundamentally wrong basis” due to an error in the method
11 employed by the City’s appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
12
13
14

15 31. The City’s appraiser purports to utilize the income method of valuation but
16 relied on inaccurate revenue and market data, as discussed further below.
17
18

19 32. The City’s appraiser purports to utilize the comparable sales method of
20 valuation, but no City witness attempted “to characterize any one, or all of them, as
21 comparable to [Taxpayer’s property].” *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
22 “several serious flaws” in ABS’s LID analysis in that case, including that the appraiser
23 “attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
24 characterize any one, or all of them, as comparable to any particular property within the LID”).
25 And no City witness could explain how specific adjustments were made to these sales to
26 account for value increases due to the hypothesized Before and After Improvements. For this
27 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
28
29
30
31
32
33
34
35
36
37

38 33. Special assessment improperly includes value lift from the Before
39 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
40 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
41 Improvements, which WSDOT had independently committed to fund. However, Mr.
42 Macaulay did not calculate the actual market value of LID properties in October 2019, and
43
44
45
46
47

1 did not separately analyze the hypothetical increase to property values attributable to
2 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
3 current value and then separately calculate a hypothetical "With WSDOT" Before value);
4 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
5 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
6 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
7 documented basis or support, Mr. Macaulay simply "ma[de] a judgment a call" on what
8 occupancy and rates would have been for the commercial properties assuming all of the
9 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
10 outright omission precludes any independent evaluation of the true market "Before" values.
11 *See* 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
12 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
13 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
14 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
15 other road, pedestrian and landscaping improvements WSDOT had already committed to
16 make.

17
18 34. However, because Mr. Macaulay testified that he did include some WSDOT-
19 related value-lift in the "Before" values, it follows that part of the special assessment
20 improperly is based on value attributable to the WSDOT Improvements. As shown by
21 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
22 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
23 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
24 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
25 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone

1 to properly exclude the value of Before Improvements from the assessments. For these
2 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
3
4 Sections II.19, II.29, and IV.B.11(a)(ii).
5

6 35. Special benefits were assigned rather than measured. Mr. Macaulay
7 arbitrarily "assigns" special benefits to Before values instead of measuring them for each
8 property. See 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
9 Shorette) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 176:1-10; 3/3/2020 (A. Gibbons)
10 Hrg Tr. at 88:25-89:3; 90:8-91:13. Based on formulas in spreadsheets that Mr. Macaulay
11 used to analyze the commercial properties, Taxpayer's experts concluded that Mr. Macaulay
12 based adjustments on hypothesized very small increases to property revenue and very small
13 reductions to cap rates to "calculate" an "After" value due to the coming 2024 LID
14 Improvements. Attachment B (ABS Spreadsheet). These series of micro adjustments were
15 based on "professional judgment" that are neither shown nor replicable.
16

17 36. For these reasons, Taxpayer appeals the following portions of the Examiner's
18 Recommendation: Sections II.19 and IV.B.11(a)(iii).
19

20 37. Special benefit falls within margin of error. The Final Special Benefit Study
21 applies an estimated value enhancement of less than 4%, which is generally within the
22 margin of error for appraisals and, therefore, not a reliable difference. See *Bellevue Plaza,*
23 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
24 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
25 of one another, this difference is considered reasonable as it falls within the standard margin
26 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
27 (P. Shorette) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay's micro-special benefit
28 percentages fall far below that 5% margin, "there is no way of authenticating" such
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 incremental changes because “[m]arket forces completely obliterate any tiny little noise
2 factor like that.” See 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
3 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25.
4
5 Additionally, the fact that “Before” values are also based on a hypothetical that adds some
6
7 unstated incremental value to actual 2019 values exacerbates this issue—the ability for an
8
9 appraiser to discern the micro-value differences between hypothetical conditions that are so
10
11 similar (the WSDOT improvements compared to the LID improvements) “verges on being
12
13 ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
14

15
16 38. Even if it were possible to accurately tease out such a miniscule hypothetical
17
18 value change due to improvements coming five years later, experts testified that there is no
19
20 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
21
22 what he felt the changes (hypothetically) would be. See 3/12/2020 (J. Gordon) Hrg. Tr. at
23
24 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A. Gibbons) Hrg. Tr. at
25
26 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
27
28 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
29
30 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.
31

32
33 39. No analysis of value increase attributable to individual components of the
34
35 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
36
37 percentage difference between hypothetical Before and After conditions. Throughout his
38
39 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
40
41 descriptions in the Addenda even though he testified that he relied on these to calculate
42
43 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
44
45 someone might be able to determine how he attributed value to After conditions described in
46
47 the Addenda, he answered that that was “not the scope of the assignment” because he was

1 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
2 that the six components were not actually a continuous project, that he was viewing them
3 together because the City asked him to, and that if he were to view them independently,
4 there was a low probability that properties in the north would specially benefit from
5 improvements in the south and vice versa. See 6/25/2020 Hrg. Tr. at 27:18-28:5.
6
7
8
9

10 40. Not only did he fail to analyze benefits from each of these non-contiguous
11 improvements, his familiarity with descriptions as whole was tenuous at best. See, e.g.,
12 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
13 arose from specific Before/After descriptions in the Addenda); cf. *Anderson v. City of*
14 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
15 objectives that guided regulators' assessment of architectural plans for buildings along a
16 "signature street" were so vague that they amounted to ad hoc review based on the
17 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
18 even though he used the renderings as "visual aid[s] in appraising the property in the before
19 and after" to "visually see what the differences would be," he could not explain what
20 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
21 when shown a rendering of a two-lane road going down to one-lane in the After condition
22 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
23 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39

40
41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. See RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
2 could explain the depiction of the same trees in the After condition nearly twice as tall as in
3 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
4 of the Examiner’s Recommendation: II.27 and IV.B.4.
5
6

7
8 41. Special assessment is not supported by comparable studies, data or reports.
9
10 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
11 that the LID Improvements will lead to meaningfully increased real estate values for
12 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
13 comparable sales or information from the “over twenty-five studies and reports” to arrive at
14 very precise special benefit increases for the commercial properties, including Taxpayer’s
15 property. For example, although Mr. Macaulay stated that no single report or study was
16 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
17 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
18 parcel-by-parcel analysis other than to say that the studies generally provided “some
19 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
20 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
21 similarities and differences between these improvements and the comparable parks he
22 looked at).
23
24

25 42. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
26 assignment of incremental increase of 0.5% to 4% to property values within the LID.
27 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
28 research misinterprets his work in critical ways, including because the LID Improvements
29 manifest the characteristics of a parkway (not a park), and his research indicates that most of
30 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
2 related value increases are in fact smaller; that estimated increases are “best guesses” rather
3 than predictions of property value increases in a particular city; and that percentages do not
4 account for diminishing returns after taking into account water views, which would be the
5 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
6 topography grants most properties in downtown a water view.
7
8
9
10
11

12 43. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
13 that this was just one source of information that was not entirely relevant because, among
14 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
15 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
16 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
17 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
18 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
19 Crompton concluded that 500 feet via road from “park” improvements is just one or two
20 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
21 significantly beyond that which the park study indicated (even if it was legitimate to use the
22 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
23 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
24 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
25 Taxpayer’s property is not even 2,000 road network feet from the “park” improvements.
26 *See* Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41

42 44. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
43 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
44 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
45
46
47

1 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
2 materials, it was clearly an important—if not *the* most important—source of information for
3 estimating special benefits (especially with respect to the condos).⁷ No City witness
4 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
5 parcel-by-parcel analysis.
6
7

8
9
10 45. The destination parks discussed in the Final Special Benefit Study do not
11 provide reliable, comparable, and valid support for the calculation of special assessments
12 here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s
13 critique of every case study cited concludes the changes to those “dwarf the difference
14 between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4;
15 Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at
16 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing
17 Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are
18 not in fact comparable). None of the parks cited in the Final Special Benefit Study were
19 funded by a LID. And in virtually all of those cases, the park improvements dramatically
20 restored unimproved or blighted areas, and properties evaluated were within two or three
21 blocks of the park.
22
23

24 46. ABS’s claimed reliance on three economic studies to support property value
25 increase is also flawed. The HR&A study does not inform what value increases are
26 expected from the LID Improvements because it projects increases to tourism from *all* of the
27
28
29
30
31
32
33

34
35
36
37
38
39
40
41
42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
2 dissimilar parks in other cities,⁸ making the methodological application to the LID
3 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
4 conclusion that there would be *no new net visitors* from downtown residents as a result of
5 the LID Improvements and could not explain how this impacted his condo analysis.
6
7
8
9
10 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
11 Property Values" primarily focused on whether the benefits accrue to the larger community
12 rather than properties adjacent to the park. And the 2014 New York City Department of
13 Transportation study is not based on real estate transactions and market sales and fails to
14 substantiate any link between increased retail sales and property values. Moreover, this
15 study only looked at impact either directly abutting the streetscape improvement, or a couple
16 hundred feet for plaza-like improvements.
17

18
19
20
21
22
23
24 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
25 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
26 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
27 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
28 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
29 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
30 asked whether he considered that HR&A's estimated LID impact is six times greater than
31 TPL's assessment of Seattle's entire park system, he surmised that it was because the
32
33
34
35
36
37
38
39
40
41

42
43
44
45
46
47

⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated expected tourists visiting the LID park was calculated using data from only from New York City, a notorious tourist destination.

1 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
2 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
3 assumptions to account for this difference, which may be partly explained by the fact that
4 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
5 approximately 3.44% of King County tourists visit Seattle primarily because of the city
6 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
7 waterfront improvements.
8
9

10
11
12
13
14
15 48. Although proximity to the improvements is a key factor in all of these
16 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
17 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
18 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
19 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
20 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
21 Improvements is approximate 20 acres and it is not a community park.⁹
22
23
24
25
26
27

28
29 49. There is no explanation in the Final Study or the supporting materials of how
30 the studies or comparable sales were used to derive values for Taxpayer's property. For
31 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
32 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
33
34
35
36

37 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
38 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
39 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
40
41
42

46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 recognized) for developing the MAI standards for mass appraisals, testified that the Final
2 Study does not meet mass appraisal standards nor allow for independent assessment of the
3 accuracy of Mr. Macauley's conclusions.
4

5
6 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
7 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
8 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
9 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
10 testimony suggests that he incorrectly believed that the only difference between direct
11 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
12 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
13 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
14 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
15 Gordon uses in doing his limited restricted report").
16

17 52. But the difference is not only in reporting—mass appraisal techniques must
18 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
19 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
20 parcel approach:
21

22 The mass appraisal technique is an appraisal method used to evaluate
23 a group of properties that are subject to similar market forces as of a
24 certain date through the use of market data, statistical analysis and
25 testing. As a result, the mass appraisal technique does not require or
26 involve analysis of each individual property's specific data.
27

28 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
29

30 53. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
31 universe of properties as a given date using standard methodology, employing common data,
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
2 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
3 model” is “a mathematical expression of how supply and demand factors interact in a
4 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
5 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
6 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
7
8
9
10
11

12 54. Regardless of client direction, Mr. Macaulay is required to comply with
13 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
14 economically feasible because it would have taken “an incredible amount of time and cost”
15 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
16 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
17 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
18
19
20
21
22

23 55. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
24 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
25 value, fails to calibrate the model structure to determine the contribution of the individual
26 characteristics affecting value, and does not review the mass appraisal results against actual
27 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
28 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
29
30
31
32
33
34
35
36

37 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
38 relationship between characteristics that affect value, and to calibrate that model to specify how
39 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
40 21). The purpose is to rationally determine what characteristics will create value, and by how much.
41 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
42 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
43 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
44 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
45 include explanation of the model specification, data requirements, calibration methods, and
46 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
47

1 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
2 proximity to the elements, the increase in market rent, market vacancy changes,
3 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
4 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
5 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
6 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
7 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
8 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
9 values were hypothetical, it was not possible to identify matched pair sales and no City
10 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
11 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
12 requires him to explain his model structure.
13
14

15 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
17 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
18 and appeals the Examiner’s denial of that motion.
19
20

21 58. Finally, Taxpayer’s property is not appurtenant—or even in close
22 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
23 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
24 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
25 property is almost 3/4 of a mile walk—more than 2,700 feet as the crow flies—from Pier 58
26
27

28
29
30
31

46
47

(o). Without this reporting, it is impossible for users of the appraisal report to determine how the appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott) Hrg. Tr. at 206:15-207:17.

1 and the core “park” improvements. Hrg. Exhibit 114 (Decl. of Z. Ahmed) at ¶ 72. And, as
2 described above, the special assessment is overstated because the Final Study makes no
3 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
4 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
5 improvements were not in place—and, in fact, much of the waterfront is a construction
6 zone following removal of the viaduct and now Pier 58 demolition. Under these
7 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
8 Mr. Macaulay at the very least should have discounted the special benefit estimates or
9 waited to perform the Study until the improvements were at least close to complete.
10
11
12
13
14
15
16
17
18

19 **Erroneous Pre-Improvement Valuation**

20
21 59. The proposed final assessment erroneously overstates the pre-improvement
22 value of Taxpayer’s property as of October 1, 2019 and, as a result, overstates the special
23 benefit to the Taxpayer’s property.
24
25

26
27 60. The City’s Final Study was used to compute the proposed final assessment of
28 Taxpayer’s property. The City’s Study purportedly uses data from the King County
29 Department of Assessments,¹¹ but the pre-improvement valuation information in the Final
30 Study does not accurately reflect this data. For example, the City’s Study values Taxpayer’s
31 property at \$93,822,000 as of October 1, 2019. However, the King County assessor
32 determined the true and fair value of the property to be \$91,935,900, valued in 2019 for tax
33 year 2020. The Final Special Benefit Study does not explain this difference—or any
34 differences—between its pre-improvement valuation and its supposed source for market
35
36
37
38
39
40
41
42
43
44

45 ¹¹ See, e.g., Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet
46 (providing a “County Link” to the King County Department of Assessment’s online “eReal
47 Property” search tool).

1 data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
2
3 Recommendation.

4
5 61. Further, Mr. Ahmed testified that Mr. Macaulay's valuation of \$93,822,000 is
6
7 excessive. He explained that the retail and parking market in downtown Seattle is extremely
8
9 challenging. The property has been unable to rent all of its retail space, and several of its
10
11 retail tenants were struggling to pay rent even before the COVID-19 outbreak. Hrg. Exhibit
12
13 114 (Z. Ahmed Decl.) at ¶ 70.

14
15 62. Mr. Gordon also explained that the appraisal for this property was not
16
17 credible because it assumed that all of the parking stalls—leased to the hotel at the higher
18
19 rate than for monthly parkers—would be 100% occupied by hotel guests. In fact, only 20%
20
21 to 30% of guests who come to hotels downtown arrive with a car. 4/13/2020 Hrg. Tr. (J.
22
23 Gordon) at 118:17-120:4.

24
25 63. Thus, aside from multiple other reasons why computation of the special
26
27 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
28
29 improvement values that do not accurately reflect market data. For these reason, Taxpayer
30
31 appeals the Examiner's recommended denial.

32 33 **Erroneous Computation of Special Benefit**

34
35 64. "Special benefit" is "the increase in fair market value attributable to the local
36
37 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
38
39 may receive by reason of the improvement is not measured alone by the physical character
40
41 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
42
43 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is
44
45 the particular tract or property benefited by the entire improvement, and is it assessed
46
47

1 proportionately with the other property included within the assessment district?” *Id.* 165–
2
3 66.

4
5 65. The proposed final assessment erroneously overstates the special benefit of
6
7 LID improvements in a number of ways.

8
9 66. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
10
11 this property, Mr. Macaulay assumed daily parking rates would increase by 1.40% (low) and
12
13 1.60% (high) due to the 2024 LID Improvements. But as Mr. Gordon testified, it is not
14
15 possible to accurately conclude that the reason for this level of percentage increase would be
16
17 due to the LID Improvements, and there appears to be no support for assignment of these
18
19 percentages. Based on formulas in the spreadsheets, Mr. Macaulay then uses these same
20
21 percentages (1.40% and 1.60%) to increase monthly parking and retail rental income. He
22
23 then uses this hypothesized increased revenue to calculate a new net operating income for
24
25 the commercial properties and capitalizes that to come up with an “After” valuation.

26
27 67. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
28
29 operating income remains the same as in the hypothetical “Before” condition, but changes
30
31 the cap rate. For this property, the cap rate goes from 7.25% to 7.13% (low scenario,
32
33 creating a bigger value increase) and 7.15% (high scenario, creating a lower value increase).
34
35 Mr. Gordon likewise explained that cap rate changes of 0.12% or 0.10% are not typically
36
37 measurable, and there appears to be no support for these changes in the Final Study or any
38
39 of its supporting materials.

40
41 68. Mr. Macaulay then averages his four “After” values to arrive at a final special
42
43 benefit conclusion. For this property, this is an increase in property value of 1.49% due to
44
45 the LID Improvements.
46
47

1 69. Mr. Macaulay offered little justification for his micro adjustments to revenue
2 and capitalization rates. When asked precisely what the basis is for his special benefit
3 percentage increases to revenue for each commercial property, he could not point to
4 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
5 is nothing in the report to allow a reader to understand how he came up with these
6 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
7 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
8 the basis for his belief that certain factors—liked increased connectivity—will increase
9 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
10 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
11 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
12 sources equally even though there was no separate analysis done for food and beverage or
13 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
14 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
15 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
16 properties.
17

18 70. Mr. Macaulay testified that he used comparable sales as a reasonableness
19 check for commercial properties. But as explained above, no City witness has explained
20 how anyone, or all, of the sales are comparable to any particular commercial property within
21 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
22 in order to make sales “comparable,” he would have had to make adjustments to account for
23 Before and After conditions, but there is no way to understand how adjustments were made
24 because he “didn’t do a separate sales comparison approach where we showed adjustments
25 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
2
3 *Id.* at 127:10-128:24.

4
5 71. It also bears noting that any “internal review” of the special benefit estimates
6
7 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
8
9 error. Indeed, given all the same information, he seemed to suggest that it would be
10
11 perfectly reasonable for another experienced appraiser to come up with special benefit
12
13 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
14
15 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
16
17 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
18
19 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
20
21 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
22
23 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
24
25 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
26
27 *Recommendation* at IV.B.4. Thus, the special assessment is not actual, measurable or
28
29 special because it is arbitrarily assigned; and it is too small to realistically be supported by
30
31 appraisal techniques.

32
33 72. No evidence of special benefit. Meanwhile, there is “no actual evidence from
34
35 any seller or purchaser that the price was higher because of the LID improvements.”
36
37 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not
38
39 identified any seller or buyer, or any particular property where the existence of the LID
40
41 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
42
43 explained that the property has not increased rental rates or revenue due to the forthcoming
44
45 LID Improvements, because, among other reasons (and apart from COVID), the
46
47 improvements ABS believes will generate value do not exist, and will not for a number of

1 years to come. There are no comparable sales because the LID Improvements are not in
2 place, nor will they be until the end of 2024 if completed on schedule.
3

4 73. The fair market value of Taxpayer's property has not changed due to
5 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
6 benefited from installation of new water main and fire hydrant where it was already
7 adequately supplied with water and afforded adequate fire protection). And in any event,
8 any value attributable to removal of the viaduct was to be excluded from the assessment
9 calculation.
10

11 74. There is no special benefit because LID improvements in fact diminish the
12 value of Taxpayer's property by drawing visitors away towards improvements that are more
13 than a 3/4 mile walk away from the property. *See Kusky*, 85 Wn. App. 493 (testimony of
14 owners' expert that LID actually diminished value of property was sufficient to rebut
15 presumption that assessment was proper).
16

17 75. Moreover, the assessment formula is an attempt to distribute costs that do not
18 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
19 "merely a mathematical model that distributes costs").
20

21 76. The Special Benefit Study fails to address whether the \$346,000,000
22 estimated LID project cost takes into account the investment that would have occurred in the
23 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
24 invested. This is a critical component of estimating which properties receive a direct benefit
25 from the improvements, versus more incidental benefits further from the park.
26

27 77. Assessments are disproportionate. As another example of how arbitrary and
28 disproportionate Mr. Macaulay's methods are, he assigned different special benefit and
29 capitalization rate increases to this parking and retail parcels associated with the Grand
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Hyatt even though these sources of revenue receive identical increases when they are part of
2 the same legal parcel as the hotel. But he ends up concluding the same special benefit
3 increase overall (~1.5% for the Grand Hyatt parcels). When asked whether this was a matter
4 of coincidence, his answer was that is “just our estimate of how the market would react.”
5
6
7
8 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a parking lot near the Grand Hyatt
9 (Parcel 0659000355) received just a 0.65% special benefit even though it is one block closer
10 to the waterfront.
11
12
13

14 78. The proposed final assessment substantially exceeds the special benefit to the
15 property and is grossly disproportionate to similarly situated properties within the LID. The
16 City has not addressed any of these specific issues and offers only general responses which
17 have already been rebutted by Objectors in their case-in-chief and cross-examination. *See*
18 Bird Decl., ¶ 29-30 (dated 4/30/2020); Second Decl. of Bird, at ¶¶ 104-109 (dated
19 6/26/2020). For these reasons, Taxpayer appeals the following portions of the Examiner’s
20 Recommendation: Sections II.17, II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).
21
22
23
24
25
26
27

28 **State Environmental Policy Act and Other Environmental Permitting**

29 79. While this appeal is not challenging the City’s environmental review and
30 permitting processes, those processes are relevant in determining the legality of the
31 assessments, and to assessing the delivery risk, the present value of the City’s plans, and
32 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
33 pursue projects that have not yet undergone environmental review (thus limiting the choice
34 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
35 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
36 is just beginning. Further, the City has segmented environmental review, and still has a
37 gauntlet of federal, state and tribal review processes to complete before it will be clear what
38
39
40
41
42
43
44
45
46
47

1 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
2 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
3 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
4 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
5 committing to reconstruction of Pier 58 and major street improvements without
6 environmental review, or the City's Final Special Study has improperly included and is
7 proposing to assess the Taxpayer the costs and special benefits of improvements that may
8 not get built. Either way, it is faulty process.
9

10 **Due Process Rights**

11 80. The City's failed to notify Taxpayer sufficiently in advance of the hearing to
12 allow Taxpayer to obtain evidence and prepare to properly challenge the assessments.
13 Because LID assessments involve a deprivation of property, affected owners have the right
14 to a hearing as to whether the improvement resulted (or will result) in special benefits to
15 their properties and whether their assessments are proportionate, which necessarily includes
16 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
17 555, 569–70, 229 P.3d 761 (2010).
18

19 81. The LID statute specifies that cities must mail notices giving the time and
20 place of the hearing to the affected owners "[a]t least fifteen days before" the hearing and
21 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
22 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
23 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
24 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
25 secure their own appraisal), evaluate proportionality of the proposed assessments, and
26

46
47

1 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
2 for anybody to get an appraisal”).

3
4 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
5
6 Final Special Benefit Study has only been available for public review since January 7, 2020.
7
8 Due to this short time frame, Taxpayer requested a prehearing conference and scheduling
9
10 order that would preserve and protect Taxpayer’s right to analyze and respond to the Final
11
12 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
13
14 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
15
16 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
17
18 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
19
20 the Examiner’s Recommendation: I.B.
21

22 23 **VII. Relief Requested**

24 Taxpayer respectfully requests that the City Council:

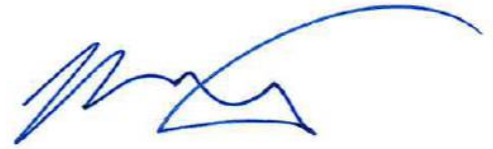

- 25
26 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
27
28 and
29
30 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
31
32 assessment dated December 30, 2019; or
33
34 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
35
36 proposed final assessment to \$0 (zero), or such amount as Taxpayer
37
38 establishes at the hearing in this matter; or
39
40 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
41
42 and reduce Taxpayer’s assessment using recognized appraisal techniques
43
44 consistent with USPAP and:
45
46
47

- 1 i. Excluding any property value increase attributable to viaduct removal
2 and other planned WSDOT Improvements;
3
4
5 ii. Taking into account the effects of the COVID-19 pandemic on the
6 value of Taxpayer's property and other relevant developments since
7 October 2019;
8
9
10 iii. Accounting for and excluding (1) any special benefits from existing
11 or planned improvements that already provide similar benefits to
12 Taxpayer's property, and (2) any special detriments from construction
13 and other anticipated LID-related disamenities;
14
15
16 iv. Accounting for and including only those actual benefits anticipated to
17 accrue to Taxpayer's property based on its location relative to Pier 58,
18 Overlook Walk, and the Promenade, and specific elements of the LID
19 Improvements;
20
21
22 v. Discounting anticipated special benefits to present value, based on
23 reliable estimates regarding when special benefits will start accruing
24 following completion of the LID Improvements; and
25
26
27 vi. Accounting for such other issues specific to Taxpayer's property
28 relevant to calculation of such assessment; and
29
30
31
32
33
34
35
36
37 3. Grant such further relief as the City Council deems just and proper.
38
39
40
41
42
43
44
45

24
25
26 **III. Statement of 7th & Pine LLC's Interest and Incorporation of Prior Arguments**

27 7TH & PINE LLC is the taxpayer for the property that is subject to the proposed
28
29 final assessment described in Section IV.

30
31 7th & Pine LLC is amending its appeal as authorized in City of Seattle Resolution
32 31979 to include additional arguments relevant to the revised Final Recommendations of the
33
34 Hearing Examiner issued on February 1, 2021. On February 4, 2020, 7th & Pine LLC
35
36 timely filed an objection to the assessment, which was based on the Final Study. 7th & Pine
37
38 LLC further timely filed an appeal of the Hearing Examiner's 2020 recommendations to the
39
40 City Council. 7th & Pine LLC maintains and incorporates all objections and arguments
41
42 raised in its appeal filed with the City Clerk on September 22, 2020. This amendment is a
43
44 supplement is to be read together with 7th & Pine LLC's appeal filed on September 22,
45
46
47

1 2020. 7th & Pine LLC incorporates by reference all filings, evidence, and pleadings filed by
2
3 any party before the Hearing Examiner as authorized by the Hearing Examiner, including
4
5 without limitation all records pertaining to the November 2020 through February 2021
6
7 remand hearing ordered by Council.
8

9 **IV. Amended Arguments on Appeal**

10 7TH & PINE LLC supplements its appeal of the Hearing Examiner's
11
12 recommendation to deny 7th & Pine LLC's objection to the City of Seattle's Waterfront
13
14 Local Improvement District No. 6751 proposed final assessment dated December 30, 2019
15
16 against the following property:
17

18 King County Parcel No. 6792120020
19 Site Address: 700 Pike St., Seattle, Washington
20 Proposed Final LID Assessment for Parcel: \$549,334
21

22 To avoid repetition, 7th & Pine LLC incorporates the evidence and arguments raised
23
24 before the Hearing Examiner and before the City in its September 22, 2020 appeal, into this
25
26 amended appeal.
27

28
29 **A. The Anticipated Special Benefits to 7th & Pine LLC's Property should**
30 **be Discounted to Present Value and Assessments Adjusted as**
31 **Appropriate**
32

33 On remand, the City's appraiser acknowledged that special benefits to parcels can be
34
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36
37 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
38
39 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
40
41 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
42
43 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
44
45 accepted that recommendation. The City's appraiser further acknowledged that benefit
46
47 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined

1 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
2 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
3 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
4 calculations to present value because the general benefits are not anticipated from the LID
5 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
6 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
7 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
8 benefit calculation, and related assessments, to account for the delay between the assessment
9 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
10 standard appraisal practice, and renders the other proposed Waterfront LID special
11 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
12 “fundamentally wrong methods.”
13
14

15 All special benefit taxes assessed by a municipality must be based on “actual,
16 physical and material [special benefits that are] not merely speculative or conjectural.”
17 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
18 Additionally, the assessments may not materially exceed the actual special benefit conferred
19 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
20 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
21 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
22 discount benefits the City estimated would accrue to the properties from improvements to be
23 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
24 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
25 property while treating all or most others (including Taxpayer’s) differently, and
26 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
2 for some properties because the benefit are too distant, while assessing other properties as
3 though distant benefits have already been secured. As Taxpayer identified in its September
4 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
7 reject the improper calculation of the benefit or remand and require the appraiser to discount
8 the benefits to net present value.
9

10
11
12
13
14
15
16
17 **B. In Light of Covid's Continuing Impact on 7th & Pine LLC and other**
18 **Downtown Property Owners and other Material Changes Since October**
19 **2019, the LID Should be Cancelled, or at Least Assessments**
20 **Recalculated, to take Into Account Property Value Reductions**
21

22 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
23 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
24 other relevant developments since October 2019." When Washington's first COVID
25 restrictions were imposed in March and April 2020, there was an assumption that they
26 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
27 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
28 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
29 gotten much worse. The City has already imposed higher minimum wages and taxes on
30 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
31 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
32 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
33 years from completion, as a best case. In current circumstances, a downtown tax to fund
34 new, non-essential park improvements against financially strapped taxpayers, and likely
35
36
37
38
39
40
41
42
43
44
45
46
47

1 passed through to financially strapped tenants and customers would be unfair to taxpayers
2 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
3 rethinks its budget priorities for the next few years, and its potentially funding sources,
4
5 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
6
7 property owners) have a chance to recover, and that any assessment take into account the
8
9 changed circumstances since this appeal process started on February 4, 2020 to avoid
10
11 unnecessarily and perhaps permanently killing downtown properties and businesses in the
12
13 name of bettering them.
14
15

16
17 **V. Relief Requested**

18
19 Particularly in light of the Committee's decision not to take further comment, 7th &
20
21 Pine LLC respectfully request that each Committee member carefully review the record
22
23 transmitted to Council before voting on our appeal.
24

25 7TH & PINE LLC respectfully reiterates its request from the September 22, 2020
26
27 appeal that the City Council:

- 28 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
29 assessment dated December 30, 2019; or
30
31
- 32 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
33 proposed final assessment to \$0 (zero), or such amount as Taxpayer
34 establishes at the hearing in this matter; or
35
36
- 37 3. Grant the Examiner's recommended remand but with instructions to
38 recalculate and reduce Taxpayer's assessment using recognized appraisal
39 techniques consistent with USPAP and
40
41
42
43
44
45 a. Excluding any property value increase attributable to viaduct removal
46 and other planned WSDOT Improvements;
47

- 1 b. Taking into account the effects of the COVID-19 pandemic on the
2 value of Taxpayer's property and other relevant developments since
3 October 2019;
4
5
6 c. Accounting for and excluding (1) any special benefits from existing
7 or planned improvements that already provide similar benefits to
8 Taxpayer's property, and (2) any special detriments from construction
9 and other anticipated LID-related disamenities;
10
11 d. Accounting for and including only those actual benefits anticipated to
12 accrue to Taxpayer's property based on its location relative to Pier 58,
13 Overlook Walk, and the Promenade, and specific elements of the LID
14 Improvements;
15
16 e. Discounting anticipated special benefits to present value, based on
17 reliable estimates regarding when special benefits will start accruing
18 following completion of the LID Improvements; and
19
20 f. Accounting for such other issues specific to Taxpayer's property
21 relevant to calculation of such assessment; and
22
23
24
25
26
27
28
29
30
31
32
33 4. Grant such further relief as the City Council deems just and proper.
34
35
36
37

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON ASHFORD
SEATTLE WATERFRONT LP’S
OBJECTION TO WATERFRONT LID NO.
6751 PROPOSED FINAL ASSESSMENT
FOR PARCEL NO. 7666202345

32
33 Ashford Seattle Waterfront LP files this appeal pursuant to RCW 35.44.070, Seattle
34 Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice of the Seattle Office
35 of the City Clerk dated December 30, 2019, and the Hearing Examiner’s Findings and
36 Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).
37
38
39
40

41
42 **I. Taxpayer / Appellant**

43 The Taxpayer filing this appeal is:

44 Ashford Seattle Waterfront LP
45
46
47

1 14185 Dallas Parkway, Suite 1100
2 Dallas, TX 75254
3

4 **II. Taxpayer's Representatives**

24 Telephone: 206.359.8000
25 Facsimile: 206.359.9000
26

27 **III. Statement of Taxpayer's Interest**

28
29 Ashford Seattle Waterfront LP's ("Ashford") owns the property that is subject to the
30 proposed final assessment described in Section IV. Marriott Business Services manages the
31 hotel on behalf of Ashford, and was included on the tax bill and assessment notice, but
32
33 Marriott does not have an ownership interest. The property is the Seattle Marriott
34
35 Waterfront, a hotel located along Alaska Way across from Pier 66. The basis of the
36
37 proposed assessment is a Final Special Benefit/Proportionate Assessment Study for
38
39 Waterfront Seattle Local Improvement District ("Final Study"), dated October 1, 2019 and
40
41 prepared by Robert Macaulay with ABS Valuation (the City's appraiser). The Final Study
42
43 proposes assessments that are purportedly limited to paying for the LID-funded
44
45
46
47

1 components—namely, the Promenade, Overlook Walk, Pioneer Square Street
2
3 Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape Improvements,
4
5 and Pier 58 (together, the “LID Improvements”). The Final Study purports to exclude
6
7 charges for other improvement projects in the Central Waterfront, and specifically those
8
9 WSDOT had already agreed to pay for and construct: viaduct demolition, the new
10
11 Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99 Tunnel,
12
13 the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned fronting
14
15 piers between Pike and Madison (together, the “WSDOT Improvements”). But because
16
17 construction was not complete on the LID Improvements or the WSDOT Improvements at
18
19 the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019 “Before” and
20
21 “After” valuations are both based on hypothetical conditions rather than actual facts. On
22
23 February 4, 2020, Taxpayer timely filed an objection to the assessment, which was based on
24
25 the Final Study.

26 27 **IV. Matter Under Appeal**

28
29 Ashford appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
30
31 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
32
33 final assessment dated December 30, 2019 against the following property:

34
35 King County Parcel No. 7666202345
36 Site Address: 2100 ALASKAN WY, Seattle, Washington
37 Proposed Final LID Assessment for Parcel: \$2,106,827

38
39 *See* Examiner’s Recommendation at 61-62, 106. To avoid repetition, Taxpayer incorporates
40
41 the evidence and arguments raised before the Hearing Examiner into this appeal. In
42
43 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
44
45 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 106, Sections II.6, II.7, II.12, II.14, II.16, II.17, II.18, II.19, II.20, II.21, II.22,
8 II.23, II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2,
9 IV.B.3, IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i),
10 IV.B.11(a)(ii), IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.2, IV.C.3, IV.C.4, IV.C.5,
11 IV.C.8, IV.C.10, IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38

39
40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$5,377,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City’s appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS’s appraisal and
5 the City’s preliminary roll. On the contrary, the City’s assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS’s appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City’s appraiser asserts that the City is not collecting assessments “based
16 on the value of WSDOT’s planned improvements.” See Final Study at 3. However, the
17 City’s own expert, Mark Lukens, acknowledged that was false. In the “Before” condition,
18 the City’s appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced “Before” value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City’s promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT’s planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City’s appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be “physical and material and not merely speculative
35 or conjectural”
36

37
38 **ABS Study:** Not only are the improvements not yet “physical or material,” but
39 environmental review and permitting for the City’s proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City’s then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** LID assessments reflect special benefits and must be proportionate
47

1 **ABS Study:** The City's appraiser proposes to assess against the value of hotel personal
2 property (furniture, fixtures and equipment), but not personal property of other types of
3 property. It is not proportionate to assess against hotel personal property and not other
4 personal property. Further, personal property is moveable, the value does not depend on
5 location, and is likely to be fully depreciated and perhaps removed before the LID
6 Improvements are in place. (Note also that personal property accounts are separate, and
7 the City gave no notice of any LID assessment against personal property. The Examiner
8 should have reversed personal property assessments on that basis as well.)
9

10
11 **Legal Requirement:** Must comply with appraisal standards
12

13 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual"
14 and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
15 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
16 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
17 Final Study fails to meet basic standards for admissibility and must be remanded.
18
19

20 **Legal Requirement:** Actual and measurable special benefit
21

22 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
23 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
24 on a host of "micro-judgments" that are not supported by any documentation, nor capable
25 of replication or quality assurance/quality control. The assessments are undocumented,
26 unreliable, and not supported by empirical studies, data, or reports.
27
28

29 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
30 supported by empirical evidence
31

32 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
33 value of parks and other public amenities and on whom ABS purported to rely, testified
34 that ABS had completely misapplied his work and dramatically overstated both the
35 distance to which economic benefits might extend from the LID Improvements and the
36 extent of any anticipated benefit within the potentially benefited area.
37
38
39

40 **Legal Requirement:** Actual special benefit—Must take into account potential
41 disamenities
42

43 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
44 construction, as well as other potential disamenities associated with public places.
45
46
47

1 **Legal Requirement:** Cannot prematurely commit to build

2
3 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
4 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
5 are being imposed. But finalizing the roll is a commitment by the City to build the
6 improvements, which is a violation of legal process and commits the City to build things it
7 may not secure permission to build.
8
9

10 In addition to these general objections, there are property-specific issues raised by
11 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
12 statement below.
13
14

15
16
17 **V. Standard of Review**

18 “When considering the assessment roll, the city council sits ‘as a board of
19 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
20 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
21 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
22 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
23
24

25 The proposed assessments are presumed correct, “unless overcome by clear, cogent
26 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
27 than the heightened presumption of correctness on judicial appeal because “applying these
28 elevated standards at the municipal hearing would afford unwarranted deference to a report
29 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
30 presumption is not evidence and its efficacy is lost when the other party adduces credible
31 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
32 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
33 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
34 presented credible evidence showing that the City’s proposed assessment is arbitrary,
35
36
37
38
39
40
41
42
43
44
45
46
47

1 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
2 to the City to prove the assessments are actual, measurable, special, non-speculative and
3 proportionate. The City failed that burden.
4

5 **VI. Grounds for Appeal**

6
7 Ashford appeals the Hearing Examiner's Findings and Recommendations on the
8 following grounds.
9

10 **Taxpayer Not Required to Provide A Special Benefit Study**

11
12 1. Contrary to the Examiner's findings and recommendations, there is no
13 requirement that experts or property owners provide an alternative special benefit
14 calculation under these circumstances—to do so would also require the same improper
15 speculation the City's expert engaged in, given the timing and information provided. *See*,
16 *e.g.*, Second Decl. of Peter Shorett ISO Closing Stmt., ¶¶ 3-4 (dated 7/7/2020); Decl. of
17 Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020). A Washington court has
18 explained: "[W]e have explicitly rejected an argument that, because certain protestors 'failed
19 to offer expert testimony at the city council hearing[,] the presumptions [in favor of the
20 assessment] were still operative as to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting
21 *In re Indian Trail Trunk Sewer*, 35 Wn. App. at 843); *see also Kuskay v. City of Goldendale*,
22 85 Wn. App. 493, 933 P.2d 430 (1997) (although appraiser did not submit an appraisal, he
23 provided expert opinion showing that improvements actually diminished value of the
24 property). In fact, no independent evidence is required at all if, for example, objectors show
25 that the assessment was grounded on a fundamentally wrong basis due to an error in the
26 City's appraiser's methods—as is the case here. *Hasit*, 179 Wn. App. at 947 (citing
27 *Doolittle v. City of Everett*, 114 Wn. 2d 88, 106, 786 P.2d 253 (1990)). As a simple example,
28 a property owner could simply point out that the square footage assumed in the City's
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 appraisal was incorrect. For these reasons, Taxpayer appeals the following portions of the
2
3 Examiner's Recommendation: Sections II.12, II.14, II.17, IV.A, IV.B.11(a), IV.C.2, IV.C.8,
4
5 and IV.C.11.

6
7 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

8
9 2. RCW 35.43.040 provides cities and towns authority for ordering local
10
11 improvements and for levying and collecting special assessments "on property specially
12
13 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed
14
15 upon all the property in accordance with the special benefits conferred thereon." RCW
16
17 35.44.010.

18
19 3. No analysis of general benefits. Special assessments have been "held valid
20
21 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
22
23 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
24
25 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
26
27 they are for the construction of local improvements that are appurtenant to specific land and
28
29 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*

30
31 4. Ashford's property is not specially benefited by the LID Improvements. The
32
33 primary purpose and effect of the LID Improvements are to benefit "members of the whole
34
35 community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public library is
36
37 for the benefit of the members of the whole community individually and collectively who
38
39 may be served by it"). Mr. Macaulay's own chapter of the LID Manual states clearly that
40
41 appraisers should "[c]onsider general benefits as well as special benefits" (Hrg. Exhibit 117
42
43 (LID Manual) at 58²) and he admits that "general benefits probably accrue to the LID area"

44
45
46 ² "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
47 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil

1 as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer's expert confirmed that if an
2 appraiser "identifies both general and special benefits, these benefits should be clearly
3 distinguished and explained, and only special benefits should be included in the After
4 assessment." Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also* 3/3/2020 (A.
5 Gibbons) Hrg. Tr. at 96:6-97:4; 3/11/2020 (P. Shorett) Hrg. Tr. at 182:14-183:4. It is
6 undisputed that Mr. Macaulay did not analyze or measure general benefits, including those
7 arising from construction necessary to meet basic design standards. *See* Hrg. Exhibit 117
8 (LID Manual) at 58 ("[c]onsideration may also be given to those construction costs related
9 to meeting design standards which may be general benefits as distinct from construction
10 costs emanating from requirements of the LID project"). To the extent Taxpayer's property
11 may benefit from the LID improvements, the benefit is general and incidental, and failure to
12 consider general benefits was a fatal flaw in the City's methodology. For these reasons,
13 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
14 IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.
15
16
17
18
19
20
21
22
23
24
25
26
27
28

29 5. LID Improvements not necessary. Unlike typical LID projects, the
30 Waterfront LID improvements are largely unnecessary to the functionality of any particular
31 property, including Taxpayer's property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
32 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
33 held invalid where owners would have benefitted equally from increase of only 9 feet);
34 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
35 intersection for new water main for hydrant held invalid because land was already afforded
36
37
38
39
40
41
42
43
44

45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City's witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 functional hydrant at nearby street). Here, Taxpayer provided evidence that the LID
2
3 Improvements are not necessary to the business of their income-producing property which
4
5 already has sufficient access to the waterfront, downtown restaurants, and other amenities
6
7 necessary for their clients and users. The fact that there is no case law differentiating
8
9 between binary improvements and parks does not change the law prohibiting assessments on
10
11 properties already adequately served by existing amenities. *See* Examiner's
12
13 Recommendation at IV.C.3 (reasoning that "no case law is provided to support the
14
15 differentiation between a hardscape benefit and the more ephemeral benefits of park"). Nor
16
17 does the Examiner's reasoning excuse the City's failure to account for existing amenities as
18
19 part of the special benefit calculation. As Dr. Crompton testified, existing view amenities
20
21 may in fact diminish the incremental effect of new park improvements on the value of
22
23 properties, much like turning on a weak light in an already brightly illuminated room. *See*
24
25 Hrg. Exhibit 94 (Crompton's Report) at 12-13.

26
27 6. To the extent benefits can be considered "special" as opposed to general, they
28
29 are nominal or nonexistent for many properties even in the Central Waterfront, which
30
31 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
32
33 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
34
35 change due to expansion of sewer service *near* owners' parcel which were already
36
37 connected). Ultimately, the primary reasons users choose a particular hotel or apartment is
38
39 not proximity to the waterfront. Instead, like most of the downtown hotels, the Seattle
40
41 Marriott Waterfront caters primarily to business travelers attending conventions and
42
43 meetings. *See, e.g.,* Hrg. Exhibit 108 (Rash Decl.), ¶ 12 (Marriott). For this reason, Mr.
44
45 Rash explained that the Seattle Marriott does not expect the LID Improvements to increase
46
47 impact on demand for rooms or room rates. *Id.* Even if the City could assess for a view

1 change (and it has promised not to assess for viaduct removal), the fair market value of
2
3 Ashford's property has not changed because the LID Improvements have not improved the
4
5 property's waterfront view or access to the waterfront, nor will they when the City
6
7 anticipates completion in 2024. For these reasons, Taxpayer appeals the following portions
8
9 of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

10
11 7. No analysis of special detriments. The Final Study fails to properly account
12
13 for special detriments. *See Kuskys*, 85 Wn. App. at 501 (city failed to consider the costs to
14
15 owners for removal and cleanup of underground storage tanks discovered during the
16
17 improvement project). Mr. Rash testified that the property is more valuable without the LID
18
19 Improvements because of the expected interference due to construction compared to the
20
21 assessment cost. Meanwhile, views already protected by air space would not be enhanced
22
23 by the addition of the LID Improvements. Mr. Rash testified that the assessment is an
24
25 immediate expense for the Seattle Marriott Waterfront that comes with no immediate
26
27 increase in revenue, thereby decreasing property values. *See Hrg. Exhibit 108 (Decl. of C.*
28
29 *Rash)*, ¶ 13. And Taxpayer does not expect near-term the increases assumed in ABS
30
31 Valuations' spreadsheets or the Final Study. Although Mr. Macaulay claims he analyzed
32
33 impacts on the City's planned elimination of 450 parking stalls on a parcel-by-parcel basis,
34
35 there is no explanation of how lost parking might be a detriment, and no property-specific
36
37 parking analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12;
38
39 *see also* 6/26/2020 Hrg. Tr. at 153:18-154:19 (did not actually analyze impact of decreased
40
41 parking on condos).

42
43 8. Likewise, there was no analysis of the risks associated with disamenities such
44
45 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
46
47 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at

1 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
2 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
3 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
4 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
5 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
6 the maintenance agreement. *Id.* at 13:4-14:2.
7
8
9
10
11

12 9. There was also no consideration of negative impacts from another four-plus
13 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
14 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
15 law allowing him to dismiss these actual, non-speculative impacts. Because future special
16 benefits calculations are inherently speculative, Washington's eminent domain statute
17 specifically allows condemnees to postpone special benefits assessments until improvements
18 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
19 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
20 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
21 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
22 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
23 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
24 II.25, IV.B.8, and IV.B.9.
25
26
27
28
29
30
31
32
33
34
35
36
37

38 10. Special benefit estimate is speculative. When calculating a special benefit,
39 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 411. “When an appraiser uses a factor ‘beyond the knowledge of reasonable certainty’, it
2 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
3 P.2d 1078 (1958)).
4

5
6 11. Assuming without conceding that one day, the City’s planned LID
7 Improvements might increase the value of neighboring properties to some extent, that
8 potential benefit is many years away and speculative. While appraisers tolerate some degree
9 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
10 far too speculative to satisfy industry practices and standards. *See e.g.*, 3/12/2020 (P.
11 Shorett) Hrg. Tr. at 92:24-93:10 (it is impossible to perform a special benefit analysis with
12 the level of precision implied in the Final Study due to the size of the LID and use of
13 hypotheticals).
14
15

16 12. Although LIDs are sometimes finalized prior to completion of improvements,
17 this is typically just six month or a year prior, and the assessments are otherwise supported
18 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
19 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
20 will not be realized for four or five years. In the meantime, there is permitting risk,
21 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
22 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
23 and to what extent, different factors will impact value. *Id.* at 51:13-53:5; *see also* 3/11/2020
24 (P. Shorett) Hrg. Tr. at 196:17-21; 205:22-206:2. Ultimately, Mr. Macaulay concedes that
25 there is inherent uncertainty in valuing the future delivery of projects because “we can’t read
26 the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he testified: “I just don’t know what the
27 market value would be as of the date the project would be finally constructed” because
28 “[t]here could be a lot of elements in the market that did occur between now and then that
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.* at 211:8-20 (no way to know if
2 his estimates will be higher or lower than comparable sales in 2024 because “markets tend to
3 fluctuate over time” and “I can’t predict the future”).
4

5
6 13. The record is clear that while no one can know what “special benefit” might
7 accrue to these properties in four years (if any), we do know that there are no actual benefits
8 now. The LID improvements provide no immediate special benefit to property owners
9 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
10 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
11 sewer system for future users). For example, notwithstanding the questionable hypothesis
12 that hotels will benefit from an expected increase in tourism (higher room rates or
13 occupancy) when the improvements are complete, it is undisputed that tourists are not
14 coming in larger numbers and paying higher room rates now because of something
15 happening five years down the road. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at 207:11-23;
16 O’Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased today for 18
17 months would rent at a higher rate due to improvements coming in 2024).
18
19
20
21
22
23
24
25
26
27
28
29

30 14. Further, there are no “plans and specifications” on file with the Clerk’s Office
31 for the LID Improvements, and it is unlawful to move to final assessments without such
32 “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
33 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
34 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
35 dollars on projects still early in the design process. *See* Washington Attorney General
36 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
37 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
38
39
40
41
42
43
44
45
46
47

1 of programs and included “only so much of the overall costs” that took place within and
2 benefitted the assessed properties).
3

4
5 15. The COVID-19 crisis highlights how fundamentally speculative and unfair it
6 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
7 anticipated to be delivered five years later. Even before COVID, it was speculative to
8 assume that market highs experienced in October 2019¹ would be sustained through 2024,
9 after an already extraordinarily long expansion period. See 3/3/2020 (A. Gibbons) Hrg. Tr.
10 at 117:6-118:9, 119:17-120:9. And Mr. Macaulay conceded: “[W]hen I was doing my
11 analysis in October 2019, who would have thought that this COVID issue would happen?”
12 6/23/2020 Hrg. Tr. at 80:3-8. At his deposition in late February, his “thought process was
13 that the market was going to continue to go up”—in fact, it did not for Taxpayer’s property.
14
15 *Id.* Mr. Gordon’s appraisals after March 1, 2020 showed that downtown hotel values had
16 already dropped an estimated 10-15% from their October 2019 levels, and occupancy rates
17 were at zero or in single digits. See Gordon Decl. (dated 4/21/2020) at ¶ 9. Hotels without
18 guests will derive no benefit, special or otherwise, from the planned LID Improvements.
19 And even assuming hotels recover prior to 2024, there is no basis for assuming that values
20 hypothesized in October 2019 will remain relevant; they are already irrelevant. See Gibbons
21 Decl. ISO Closing Stmt. at ¶ 12 (dated 7/7/2020). Mr. Rash testified via declaration how
22 COVID has decimated demand at the Seattle Waterfront Marriott, where occupancy stood
23 close to 1% and demand is not expected to pick up until people are comfortable to travel
24 again. See Hrg. Exhibit 108 (Rash Decl.), ¶ 17. Although COVID does not change actual
25 values as of October 2019 (see Examiner’s Recommendation at 109), the pandemic has
26 impacted *current* values and rendered the hypothetical October 2019 Final Study valuations
27 outdated.

47

1 16. As another example of how future events could affect the accuracy and
2 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
3 Examiner re-open the record to allow the City to explain whether the assessments against
4 property owners within the LID are, in fact, being used by the City to fund the emergency
5 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
6 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
7 would be improperly imposing costs on property owners within the LID for improvements
8 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
9 habitat and City infrastructure—this does not provide any special benefit to LID property
10 owners.
11

12 17. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18

28

1 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
2 potential delays and project changes inherent in those processes, that call into question the
3 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
4 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
5 Decl., dated 4/15/2020).
6
7
8
9

10 18. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
11 he could not point to a single one where the assessment roll was finalized five years in
12 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
13 he has never recommended final special assessments based on designs less than 30 percent
14 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
15 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
16 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
17 at 66:17-25. He performed no independent due diligence to determine the reliability of the
18 City’s estimates for completion of the LID Improvements, or to ensure that proposed
19 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
20 agreed that if any of his assumptions are incorrect, his opinion of market value would need
21 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
22 68:11-18.
23
24
25
26
27
28
29
30
31
32
33
34
35

36 19. The City has cited no authority—and Taxpayer is aware of none—that
37 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
38 assess taxes for “actual” special benefits that will not accrue for another five years (if all
39 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
40 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
41 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
42
43
44
45
46
47

1 reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
3 IV.C.14, and IV.C.18.
4

5
6 20. Failure to discount special benefit estimates to account for risks and present
7 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
8 have accounted for risks associated with delivery of the improvements (including permitting
9 risk, construction risk, general economic risk) and any special damages associated with
10 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
11 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
12 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
13 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
14 the impact of future conditions [through] discounted cash flow analysis.").

15
16 21. Mr. Macaulay acknowledged that appraisers can discount the value of a
17 future condition not in place at the date of valuation and can discount for the time value of
18 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
19 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
20 Discounting would also have been consistent with his approach for analyzing special
21 benefits to vacant land. He testified that the difference between similarly situated vacant
22 sites slated for development and already developed sites was that the labor, capital and risks
23 associated with development had not yet been borne for those vacant sites. Therefore, the
24 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
25 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
26 fully permitted, has not completed environmental review, and has not reached full design is
27 presently worth significantly less.
28
29
30
31
32

37
38
39
40
41
42
43
44
45
46
47

1 22. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
2 present value, an appraiser would consider discount rates for land development to account
3 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
4 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer
5 to the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
6 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
7
8
9
10
11

12 23. Applying the Q19 Korpacz rates and assuming arguendo that Macauley's
13 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
14 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
15 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
16 ignoring momentarily all of the other methodological and other flaws discussed here and in
17 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
18 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
19 exceeds special benefits when reduced to present value. Further, to the extent the City is
20 arguing that because they are permitted to assess 100% of the special benefit, the special
21 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
22 is again wrong. After applying proper discounting, the City's proposed special benefit
23 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
24 100% of the total estimated special benefit.
25
26
27
28
29
30
31
32
33
34
35
36
37

38 24. But even the assumption that the LID improvements would deliver benefits
39 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
40 on. Rather, those studies demonstrate that a discount period of five years is conservative.
41 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
42 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
43
44
45
46
47

1 indicates that during the construction period, the Greenway district “significantly” lagged in
2 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
3 “reorientation of development to capture value takes time”—specifically, 12-13 years. *Id.* at
4 30-31 (discussing New York City High Line and San Francisco Embarcadero
5 improvements). Given the lengthy delay, any prediction of future special benefits is
6 speculative, especially during the construction phase where values are likely to decline.
7
8 Second Decl. of Shorett ISO Closing Stmt., ¶ 6 (dated 7/7/2020). And assuming the LID
9 Improvements take a similarly long period of time after they are complete to start producing
10 tangible property value benefits, each additional year of delay results in further discount to
11 the present value of any future alleged benefit. Gibbons Decl. ISO Closing Stmt., ¶ 19, Ex.
12 A.
13
14

15 25. Applying the same discounting methods described above and in Mr. Gibbons
16 declaration, the 2019 net present value of ABS’s estimate for benefits that actually start
17 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
18 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
19 100% assessment should be no more than \$506,513.40. Anything more would permit the
20 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
21 place and providing benefit, and ignore the risks, construction disamenity, and time value of
22 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
23 would counsel that the assessment should be only 39.2% of that assessment cap, or
24 \$198,553.25.
25
26

27 26. Attachment C includes two Excel spreadsheets applying these discounting
28 methods to Taxpayer’s assessment. It is undisputed that special benefits will not actually
29 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 demonstrates that discounting the City’s hypothetical October 2019 special benefits to
2 present value would reduce Taxpayer’s assessment to \$722,826, exclusive of any other
3 flaws in the City’s proposed assessment. The second spreadsheet shows even more drastic
4 reductions after taking into account: (1) a rough discount for property value loss due to
5 COVID-19; and (2) discounting to present value for 5 years (*i.e.*, from 2024 when the City
6 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
7 the time it takes for the improvements to capture property value). After such reductions,
8 Taxpayer’s assessment would be just \$626,387 (for the 5-year discount) or \$172,110 (for
9 the 10-year discount). Neither of these spreadsheets address other issues raised by
10 Taxpayer’s appeal, but are intended to help demonstrate how unfair and inflated the City’s
11 proposed hypothetical assessment is. The Hearing Examiner’s Recommendation simply
12 dismisses Taxpayer’s discounting argument without legal or factual analysis; that failure is
13 error.

22
23
24
25

26 **Appraisal and Assessment Calculation Methods Are Flawed**

27
28 27. The “general rule is that each lot, piece, or parcel of land should be assessed
29 separately” for purposes of local improvement district special assessment. *Doolittle*, 114
30 Wn.2d at 97.
31
32
33

34 28. It is proper to sustain a challenge to an assessment, even without the appraisal
35 testimony from the owner, where the objector’s expert establishes that the assessment was
36 “clearly grounded upon a fundamentally wrong basis” due to an error in the method
37 employed by the City’s appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
38
39
40
41

42 29. The City’s appraiser purports to utilize the income method of valuation but
43 relied on inaccurate revenue and market data, as discussed further below.
44
45
46
47

1 30. The City’s appraiser purports to utilize the comparable sales method of
2 valuation, but no City witness attempted “to characterize any one, or all of them, as
3 comparable to [Taxpayer’s property].” *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
4 “several serious flaws” in ABS’s LID analysis in that case, including that the appraiser
5 “attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
6 characterize any one, or all of them, as comparable to any particular property within the LID”).
7 And no City witness could explain how specific adjustments were made to these sales to
8 account for value increases due to the hypothesized Before and After Improvements. For this
9 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
10

11 31. Special assessment improperly includes value lift from the Before
12 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
13 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15 Macaulay did not calculate the actual market value of LID properties in October 2019, and
16 did not separately analyze the hypothetical increase to property values attributable to
17 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
18 current value and then separately calculate a hypothetical “With WSDOT” Before value);
19 Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020 Letter
20 (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal Petition) at
21 3-4; Shorett Appraisal Review (attached to Appeal Petition) at 2-14. Without any
22 documented basis or support, Mr. Macaulay simply “ma[de] a judgment a call” on what
23 occupancy and rates would have been for the commercial properties assuming all of the
24 WSDOT Improvements are completed as of 2019. Macaulay Depo. at 129:19-130:11. This
25 outright omission precludes any independent evaluation of the true market “Before” values.
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 See 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards;
2
3 if an appraiser uses current sales data to infer values, then the appraiser must explain how he
4
5 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
6
7 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
8
9 other road, pedestrian and landscaping improvements WSDOT had already committed to
10
11 make.

12
13 32. However, because Mr. Macaulay testified that he did include some WSDOT-
14
15 related value-lift in the “Before” values, it follows that part of the special assessment
16
17 improperly is based on value attributable to the WSDOT Improvements. As shown by
18
19 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
20
21 percentage to Before values. So for example, if Mr. Macaulay believed the WSDOT
22
23 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
24
25 special benefit assignment would result in \$300,000 of over-assessment. See Gibbons Decl.
26
27 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
28
29 to properly exclude the value of Before Improvements from the assessments. For these
30
31 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
32
33 Sections II.16, II.19, II.29, and IV.B.11(a)(ii)

34
35 33. Special benefits were assigned rather than measured. Mr. Macaulay
36
37 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
38
39 property. See 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/12/2020 (P.
40
41 Shorett) Hrg. Tr. at 49:4-50:1; *id.* (J. Gordon) at 168:2-20; 3/3/2020 (A. Gibbons) Hrg Tr. at
42
43 88:25-89:3; 90:8-91:13. Based on formulas in spreadsheets that Mr. Macaulay used to
44
45 analyze the commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based
46
47 adjustments on hypothesized very small increases to property revenue and very small

1 reductions to cap rates to “calculate” an “After” value due to the coming 2024 LID
2 Improvements. Attachment B (ABS Spreadsheet). These series of micro adjustments were
3 based on “professional judgment” that are neither shown nor replicable.
4

5
6 34. For these reasons, Taxpayer appeals the following portions of the Examiner’s
7 Recommendation: Sections II.19 and IV.B.11(a)(iii).
8
9

10 35. Special benefit falls within margin of error. The Final Special Benefit Study
11 applies an estimated value enhancement of less than 4%, which is generally within the
12 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
13 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
14 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
15 of one another, this difference is considered reasonable as it falls within the standard margin
16 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/11/2020
17 (P. Shorett) Hrg. Tr. at 216:25-217:11. Because Mr. Macaulay’s micro-special benefit
18 percentages fall far below that 5% margin, “there is no way of authenticating” such
19 incremental changes because “[m]arket forces completely obliterate any tiny little noise
20 factor like that.” *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed
21 during his deposition that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Yet,
22 Mr. Macaulay assigned or purported to measure a difference in revenue and cap rates for
23 Taxpayer’s property within that margin. Additionally, the fact that “Before” values are also
24 based on a hypothetical that adds some unstated incremental value to actual 2019 values
25 exacerbates this issue—the ability for an appraiser to discern the micro-value differences
26 between hypothetical conditions that are so similar (the WSDOT improvements compared to
27 the LID improvements) “verges on being ludicrous.” 3/3/2020 (A. Gibbons) Hrg. Tr. at
28 89:4-90:7.
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 36. Even if it were possible to accurately tease out such a miniscule hypothetical
2 value change due to improvements coming five years later, experts testified that there is no
3 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
4 what he felt the changes (hypothetically) would be. *See* 3/12/2020 (J. Gordon) Hrg. Tr. at
5 168:2-20; 176:1-177:6; *id.* (P. Shorett) at 49:4-50:1; 3/3/2020 (A Gibbons) Hrg. Tr. at
6 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.
9

10 37. No analysis of value increase attributable to individual components of the
11 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
12 percentage difference between hypothetical Before and After conditions. Throughout his
13 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
14 descriptions in the Addenda even though he testified that he relied on these to calculate
15 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
16 someone might be able to determine how he attributed value to After conditions described in
17 the Addenda, he answered that that was “not the scope of the assignment” because he was
18 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
19 that the six components were not actually a continuous project, that he was viewing them
20 together because the City asked him to, and that if he were to view them independently,
21 there was a low probability that properties in the north would specially benefit from
22 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.
23

24 38. Not only did he fail to analyze benefits from each of these non-contiguous
25 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
26 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
2
3 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
4 objectives that guided regulators’ assessment of architectural plans for buildings along a
5 “signature street” were so vague that they amounted to ad hoc review based on the
6 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that
7
8 even though he used the renderings as “visual aid[s] in appraising the property in the before
9 and after” to “visually see what the differences would be,” he could not explain what
10
11 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
12
13 when shown a rendering of a two-lane road going down to one-lane in the After condition
14
15 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
16
17 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
18
19 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
20
21 could explain the depiction of the same trees in the After condition nearly twice as tall as in
22
23 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
24
25 of the Examiner’s Recommendation: II.27 and IV.B.4.
26
27
28
29

30 39. Special assessment is not supported by comparable studies, data or reports.
31
32 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
33
34 that the LID Improvements will lead to meaningfully increased real estate values for
35
36 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
37
38
39

40
41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 comparable sales or information from the “over twenty-five studies and reports” to arrive at
2 very precise special benefit increases for the commercial properties, including Taxpayer’s
3 property. For example, although Mr. Macaulay stated that no single report or study was
4 directly on point due to the unique nature of the LID Improvements (*see, e.g.*, 6/25/2020
5 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific adjustments in his
6 parcel-by-parcel analysis other than to say that the studies generally provided “some
7 background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12; *see also*
8 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account for
9 similarities and differences between these improvements and the comparable parks he
10 looked at).

21 40. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
22 assignment of incremental increase of 0.5% to 4% to property values within the LID.
23 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
24 research misinterprets his work in critical ways, including because the LID Improvements
25 manifest the characteristics of a parkway (not a park), and his research indicates that most of
26 a *park’s* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
27 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
28 related value increases are in fact smaller; that estimated increases are “best guesses” rather
29 than predictions of property value increases in a particular city; and that percentages do not
30 account for diminishing returns after taking into account water views, which would be the
31 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
32 topography grants most properties in downtown a water view.

41 41. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
42 that this was just one source of information that was not entirely relevant because, among
43
44
45
46
47

1 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
2 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
3 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
4 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
5 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
6 Crompton concluded that 500 feet via road from “park” improvements is just one or two
7 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
8 significantly beyond that which the park study indicated (even if it was legitimate to use the
9 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
10 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
11 impact applicable to “community parks”—which the LID Improvements are not. *Id.*
12 Taxpayer’s property is not within 500 road network feet from the “park” improvements. *See*
13 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Exs. E, F.

14
15 42. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
16 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
17 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
18 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
19 materials, it was clearly an important—if not *the* most important—source of information for
20 estimating special benefits (especially with respect to the condos).⁷ No City witness

47

⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr. at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a park (or streetscape) improvement—other studies estimated premiums for real estate only much closer or cited to Dr. Crompton.

adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s parcel-by-parcel analysis.

43. The destination parks discussed in the Final Special Benefit Study do not provide reliable, comparable, and valid support for the calculation of special assessments here. *See* Shorett Appraisal Review (attached to Appeal Petition) at 15-19 (Shorett’s critique of every case study cited concludes the changes to those “dwarf the difference between the before-after condition of the property with LID”); Gibbons 5/2/2018 Letter at 4; Hrg. Exhibit 49 (P. Shorett’s Supplemental Report); 3/11/2020 (P. Shorett) Hrg. Tr. at 208:8-24; 3/12/2020 (P. Shorett) Hrg. Tr. at 6:19-7:18; Second Decl. of Shorett ISO Closing Stmt., ¶ 5 (explaining again why the San Francisco, Boston, and Portland case studies are not in fact comparable). None of the parks cited in the Final Special Benefit Study were funded by a LID. And in virtually all of those cases, the park improvements dramatically restored unimproved or blighted areas, and properties evaluated were within two or three blocks of the park.

44. ABS’s claimed reliance on three economic studies to support property value increase is also flawed. The HR&A study does not inform what value increases are expected from the LID Improvements because it projects increases to tourism from *all* of the Waterfront Projects (not just those funded by the LID) and is based on tourism data from dissimilar parks in other cities,⁸ making the methodological application to the LID

⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose Kennedy Greenway, and Millennium Park where tourist “capture rates” varied from 5% (Rose Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated expected tourists visiting the LID park was calculated using data from only from New York City, a notorious tourist destination. More fundamentally, the assumption that hotel visitors are going to increase their stays in the Seattle core based on proximity to Pier 58, as an example, is contrary to how hotel visitors actually select hotels to stay in.

1 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
2 conclusion that there would be *no new net visitors* from downtown residents as a result of
3 the LID Improvements and could not explain how this impacted his condo analysis.
4
5
6 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
7 Property Values" primarily focused on whether the benefits accrue to the larger community
8 rather than properties adjacent to the park. And the 2014 New York City Department of
9 Transportation study is not based on real estate transactions and market sales and fails to
10 substantiate any link between increased retail sales and property values. Moreover, this
11 study only looked at impact either directly abutting the streetscape improvement, or a couple
12 hundred feet for plaza-like improvements.
13
14
15
16
17
18
19

20
21 45. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
22 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
23 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
24 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
25 compared with HR&A's estimate of \$191 million for just the waterfront improvements, and
26 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
27 asked whether he considered that HR&A's estimated LID impact is six times greater than
28 TPL's assessment of Seattle's entire park system, he surmised that it was because the
29 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
30 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
31 assumptions to account for this difference, which may be partly explained by the fact that
32 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
33 approximately 3.44% of King County tourists visit Seattle primarily because of the city
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
2 waterfront improvements.
3

4 46. Although proximity to the improvements is a key factor in all of these
5 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
6 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
7 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
8 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
9 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
10 Improvements is approximate 20 acres and it is not a community park.⁹
11

12 47. There is no explanation in the Final Study or the supporting materials of how
13 the studies or comparable sales were used to derive values for Taxpayer's property. For
14 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
15 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
16

17 48. Failure to comply with USPAP. Taxpayer's assessment also rests on a
18 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
19 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
20 recognized) for developing the MAI standards for mass appraisals, testified that the Final
21 Study does not meet mass appraisal standards nor allow for independent assessment of the
22 accuracy of Mr. Macauley's conclusions.
23

24 49. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
25 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
26

27 ⁹ *See*
28 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
29 connecting Seattle's central waterfront to downtown.").

1 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
2 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
3 testimony suggests that he incorrectly believed that the only difference between direct
4 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
5 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
6 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
7 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
8 Gordon uses in doing his limited restricted report").

16 50. But the difference is not only in reporting—mass appraisal techniques must
17 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
18 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
19 parcel approach:
20
21
22
23

24 The mass appraisal technique is an appraisal method used to evaluate
25 a group of properties that are subject to similar market forces as of a
26 certain date through the use of market data, statistical analysis and
27 testing. As a result, the mass appraisal technique does not require or
28 involve analysis of each individual property's specific data.
29
30

31 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
32
33

34 51. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
35 universe of properties as a given date using standard methodology, employing common data,
36 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
37 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
38 model" is "a mathematical expression of how supply and demand factors interact in a
39 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
40
41
42
43
44
45
46
47

1 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
2 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
3

4
5 52. Regardless of client direction, Mr. Macaulay is required to comply with
6 USPAP. So if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have been
7 economically feasible because it would have taken “an incredible amount of time and cost”
8 (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an appraisal
9 consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8 (“performing an
10 individual appraisal of each [condo] parcel would have been cost and time prohibitive”).
11
12

13
14 53. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
15 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
16 value, fails to calibrate the model structure to determine the contribution of the individual
17 characteristics affecting value, and does not review the mass appraisal results against actual
18 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
19 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
20
21

22
23 54. Mr. Macaulay explained that factors like “aesthetic change in the area, the
24 proximity to the elements, the increase in market rent, market vacancy changes,
25
26
27
28
29
30
31
32
33

34 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
35 relationship between characteristics that affect value, and to calibrate that model to specify how
36 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
37 21). The purpose is to rationally determine what characteristics will create value, and by how much.
38 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
39 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
40 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
41 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
42 include explanation of the model specification, data requirements, calibration methods, and
43 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
44 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
45 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
46 Hrg. Tr. at 206:15-207:17.
47

1 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
2 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
3 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
4 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
5 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
6 internal review process. *Id.* at 104:24-105:20. And because both the Before and After
7 values were hypothetical, it was not possible to identify matched pair sales and no City
8 witness explained how ABS Valuation made adjustments to “comparable” sales in order to
9 check their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which
10 requires him to explain his model structure.
11

12 55. For these reasons, Taxpayer appeals the following portions of the Examiner’s
13 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
14 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
15 and appeals the Examiner’s denial of that motion.
16

17 56. Finally, Taxpayer’s property is not appurtenant—or even in close
18 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
19 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
20 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
21 property is not even within 500 road network feet from the core park improvements. And,
22 as described above, the special assessment is overstated because the Final Study makes no
23 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
24 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
25 improvements were not in in place—and, in fact, much of the waterfront is a construction
26 zone following removal of the viaduct and now Pier 58 demolition. Under these
27
28

45
46
47

1 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
2
3 Mr. Macaulay at the very least should have discounted the special benefit estimates or
4
5 waited to perform the Study until the improvements were at least close to complete.
6

7 **Erroneous Pre-Improvement Valuation**

8
9 57. The proposed final assessment erroneously overstates the pre-improvement
10 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
11 benefit to the Taxpayer's property.
12

13
14 58. The City's Final Study was used to compute the proposed final assessment of
15 Ashford's property. The City's Study purportedly uses data from the King County
16 Department of Assessments,¹¹ but the pre-improvement valuation information in the Final
17 Study does not accurately reflect this data. For example, the City's Study values Ashford's
18 property at \$167,975,000 as of October 1, 2019. However, the King County assessor
19 determined the true and fair value of the property to be \$158,638,300, valued in 2019 for tax
20 year 2020. In other words, the Final Special Benefit Study's valuation is 105% of King
21 County's assessed value. The Final Special Benefit Study does not explain this difference—
22 or any differences—between its pre-improvement valuation and its supposed source for
23 market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
24 Recommendation.
25
26

27
28 59. Thus, aside from multiple other reasons why computation of the special
29 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
30
31
32
33
34
35
36

37
38
39
40
41
42
43
44
45 ¹¹ See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet
46 (providing a "County Link" to the King County Department of Assessment's online "eReal
47 Property" search tool).

1 improvement values that do not accurately reflect market data. For these reason, Taxpayer
2
3 appeals the following portions of the Examiner's Recommendation: Section III at 106.
4

5 **Erroneous Computation of Special Benefit**

6 60. "Special benefit" is "the increase in fair market value attributable to the local
7
8 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
9
10 may receive by reason of the improvement is not measured alone by the physical character
11
12 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
13
14 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). "The question is: To what extent is
15
16 the particular tract or property benefited by the entire improvement, and is it assessed
17
18 proportionately with the other property included within the assessment district?" *Id.* 165–
19
20 66.
21

22 61. The proposed final assessment erroneously overstates the special benefit of
23
24 LID improvements in a number of ways.
25

26 62. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
27
28 the Seattle Marriott Waterfront, Mr. Macaulay assumed room/rental rates would increase by
29
30 1.75% (low) and 2.00% (high) due to the 2024 LID Improvements. But as Mr. Gordon
31
32 testified, it is not possible to accurately conclude that the reason for this level of percentage
33
34 increase would be due to the LID Improvements, and there appears to be no support for
35
36 assignment of these percentages. Based on formulas in the spreadsheets, Mr. Macaulay then
37
38 uses these same percentages (1.75% and 2.00%) to increase food and beverage revenue, and
39
40 parking. He then uses this hypothesized increased revenue to calculate a new net operating
41
42 income for the commercial properties and capitalizes that to come up with an "After"
43
44 valuation.
45
46
47

1 63. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
2 operating income remains the same as in the hypothetical “Before” condition, but changes
3 the cap rate. For the Seattle Marriott Waterfront the cap rate goes from 7.25% to 7.05%
4 (low scenario, creating a bigger value increase) and 7.00% (high scenario, creating a lower
5 value increase). Mr. Gordon likewise explained that cap rate changes of 0.2 or 0.25% are
6 not typically measurable, and there appears to be no support for these changes in the Final
7 Study or any of its supporting materials.
8
9

10 64. Mr. Macaulay then averages his four “After” values to arrive at a final special
11 benefit conclusion. For the Seattle Marriott Waterfront, this is an increase in property value
12 of 3.2% due to the LID Improvements.
13
14

15 65. Mr. Macaulay offered little justification for his micro adjustments to revenue
16 and capitalization rates. When asked precisely what the basis is for his special benefit
17 percentage increases to revenue for each commercial property, he could not point to
18 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
19 is nothing in the report to allow a reader to understand how he came up with these
20 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
21 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
22 the basis for his belief that certain factors—liked increased connectivity—will increase
23 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
24 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
25 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
26 sources equally even though there was no separate analysis done for food and beverage or
27 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
28 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer's
2 properties.
3

4
5 66. When asked the basis for making such adjustments, Mr. Macaulay pointed to
6 "discussions with Mr. Lukens." *Id.* at 116:5-19; 117:1-8; 126:3-7 ("Mr. Lukens helped
7 significantly in that regard in helping, you know, look at probable adjustments"). However,
8 Mr. Lukens testified that he did not review the percentage increases. *See* 6/25/2020 Hrg. Tr.
9 at 170:24-172:20.¹² And he did not review any work or data to determine whether the
10 revenue percentage adjustments in the spreadsheets were reasonable, nor did he ever find
11 them to be unreasonable or suggest any changes. *Id.* at 172:3-20. Instead, he appeared to be
12 considering them for the first time on cross examination, testifying that the adjustments
13 "appear to be a kind of sensitivity analysis" and "appear to be a very minor change." *Id.* at
14 170:18-172:13. Likewise, he had no understanding of what factors went into determining
15 the change in capitalization rates in the spreadsheets. *Id.* at 173:23-174:1. And he did not
16 know how ABS Valuation reconciled the four scenarios to come to final estimated special
17 benefit. *Id.* at 174:22-175:4.
18
19
20
21
22
23
24
25
26
27
28
29

30 67. Mr. Macaulay testified that he used comparable sales as a reasonableness
31 check for commercial properties. But as explained above, no City witness has explained
32 how anyone, or all, of the sales are comparable to any particular commercial property within
33
34
35
36
37

38 ¹² As another example of how arbitrary Mr. Macaulay's methods are, he assigned different
39 special benefit and capitalization rate increases to the parking and retail parcels associated with the
40 Grand Hyatt and the Four Season even though these sources of revenue receive identical increases
41 when they are part of the same legal parcel as the hotel. But he ends up concluding the same special
42 benefit increase overall (3% for all of the Four Seasons parcels and 1.5% for the Grand Hyatt
43 parcels). When asked whether this was a matter of coincidence, his answer was that is "just our
44 estimate of how the market would react." 6/23/2020 Hrg. Tr. at 151:24-152:9. But by comparison, a
45 parking lot near the Grand Hyatt (Parcel 0659000355) received just a 0.65% special benefit even
46 though it is one block closer to the waterfront.
47

1 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
2 in order to make sales “comparable,” he would have had to make adjustments to account for
3 Before and After conditions, but there is no way to understand how adjustments were made
4 because he “didn’t do a separate sales comparison approach where we showed adjustments
5 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
6 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
7
8
9
10
11
12
13 *Id.* at 127:10-128:24.

14
15 68. It also bears noting that any “internal review” of the special benefit estimates
16 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
17 error. Indeed, given all the same information, he seemed to suggest that it would be
18 perfectly reasonable for another experienced appraiser to come up with special benefit
19 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
20 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
21 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
22 margin of error conflicts with the testimony of Taxpayer’s experts and reaffirms that there
23 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
24 margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still
25 reasonable and unreasonable variations within the appraisal field. *See Examiner’s*
26 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
27 special because it is arbitrarily assigned; and it is too small to realistically be supported by
28 appraisal techniques.
29
30
31
32
33
34
35
36
37
38
39
40
41

42 69. No evidence of special benefit. Meanwhile, there is “no actual evidence from
43 any seller or purchaser that the price was higher because of the LID improvements.”
44
45
46
47 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not

1 identified any seller or buyer, or any particular property where the existence of the LID
2 improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has
3 explained that the property has not increased rental rates or revenue due to the forthcoming
4 LID Improvements, because, among other reasons (and apart from COVID), the
5 improvements ABS believes will generate value do not exist, and will not for a number of
6 years to come. There are no comparable sales because the LID Improvements are not in
7 place, nor will they be until the end of 2024 if completed on schedule.
8
9

10 70. The fair market value of Ashford’s property has not changed due to increased
11 waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially benefited
12 from installation of new water main and fire hydrant where it was already adequately
13 supplied with water and afforded adequate fire protection). And in any event, any value
14 attributable to removal of the viaduct was to be excluded from the assessment calculation.
15

16 71. There is no special benefit because LID improvements in fact diminish the
17 value of Ashford’s property by placing the hotel at a competitive disadvantage to peer hotels
18 due to the higher and disproportionate assessment. *See Kusky*, 85 Wn. App. 493 (testimony
19 of owners’ expert that LID actually diminished value of property was sufficient to rebut
20 presumption that assessment was proper).
21
22

23 72. Moreover, the assessment formula is an attempt to distribute costs that do not
24 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
25 “merely a mathematical model that distributes costs”).
26
27

28 73. The Special Benefit Study fails to address whether the \$346,000,000
29 estimated LID project cost takes into account the investment that would have occurred in the
30 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 invested. This is a critical component of estimating which properties receive a direct benefit
2 from the improvements, versus more incidental benefits further from the park.
3

4 74. Assessments are disproportionate. Taxpayer also presented evidence
5 showing that the assessments are disproportionate. For example, the City disproportionately
6 assessed hotels a greater percentage of the cost of the Improvements even though there no
7 evidence that hotel properties will in fact benefit. And even within the hotels, the
8 assessments are disproportionate. Mr. Gordon testified that the differences between the
9 special benefit increases for the Hyatt at Olive 8, the Grand Hyatt, and Hyatt Regency—
10 which are all very close together—made little sense and raised doubts as to
11 proportionality. The Marriott is assessed a 3.2% special assessment, whereas comparable
12 hotels along the waterfront received an estimated 0.97% increase in value. Hrg. Exhibit 108
13 (Rash Decl.), ¶¶ 11-12.
14

15 75. Mr. Macaulay also included personal property in his valuation of hotels even
16 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
17 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
18 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
19 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
20 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
21 receiving a disproportionately high LID assessment in comparison to other property types,
22 since hotels were the only property type subject to personal property LID assessments.
23 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
24 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
25 notice procedures because hotel property owners only received notice that their real estate
26 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).

36
37
38
39
40
41
42
43
44
45
46
47

1 76. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
2 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
3 a television at the waterfront Marriott is assigned a greater special benefit than the same
4 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
5 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
6 unreasonable to assign a value lift to personal property that is replaceable at the same cost
7 and may be obsolete before the LID improvements are even completed. *See* Second Decl. of
8 Shorette ISO Closing Stmt., ¶ 7 (dated 7/7/2020). Further, personal property is highly
9 depreciable, and likely to be fully depreciated or potentially discarded by 2024. *Id.*; *see also*
10 Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must be redone to correct
11 for this error.
12

13 77. The proposed final assessment substantially exceeds the special benefit to the
14 property and is grossly disproportionate to similarly situated properties within the LID. For
15 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
16 Sections II.17, II.22, II.23, II.27, IV.B.4, IV.B.11(a)(iii), and IV.C.10.
17

18 **State Environmental Policy Act and Other Environmental Permitting**

19 78. While this appeal is not challenging the City's environmental review and
20 permitting processes, those processes are relevant in determining the legality of the
21 assessments, and to assessing the delivery risk, the present value of the City's plans, and
22 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
23 pursue projects that have not yet undergone environmental review (thus limiting the choice
24 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
25 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
26 is just beginning. Further, the City has segmented environmental review, and still has a
27

1 gauntlet of federal, state and tribal review processes to complete before it will be clear what
2 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
3 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
4 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
5 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
6 committing to reconstruction of Pier 58 and major street improvements without
7 environmental review, or the City's Final Special Study has improperly included and is
8 proposing to assess the Taxpayer the costs and special benefits of improvements that may
9 not get built. Either way, it is faulty process.

10 **Due Process Rights**

11 79. The City's failed to notify Ashford sufficiently in advance of the hearing to
12 allow Ashford to obtain evidence and prepare to properly challenge the assessments.
13 Because LID assessments involve a deprivation of property, affected owners have the right
14 to a hearing as to whether the improvement resulted (or will result) in special benefits to
15 their properties and whether their assessments are proportionate, which necessarily includes
16 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
17 555, 569–70, 229 P.3d 761 (2010).

18 80. The LID statute specifies that cities must mail notices giving the time and
19 place of the hearing to the affected owners "[a]t least fifteen days before" the hearing and
20 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
21 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
22 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
23 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
24 secure their own appraisal), evaluate proportionality of the proposed assessments, and

1 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
2 for anybody to get an appraisal”).

3
4 81. The City’s Notice of Assessment was sent on December 30, 2019. And the
5 Final Special Benefit Study has only been available for public review since January 7, 2020.
6
7 Due to this short time frame, Ashford requested a prehearing conference and scheduling
8 order that would preserve and protect Ashford’s right to analyze and respond to the Final
9 Study, obtain expert appraisal testimony, conduct depositions, and to accommodate
10 preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s
11 assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
12 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
13 the Examiner’s Recommendation: I.B.
14
15
16
17
18
19
20
21

22 **VII. Relief Requested**

23 Ashford respectfully requests that the City Council:

- 24 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection;
25 and
26
27 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
28 assessment dated December 30, 2019; or
29
30 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
31 proposed final assessment to \$0 (zero), or such amount as Taxpayer
32 establishes at the hearing in this matter; or
33
34 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
35 and reduce Taxpayer’s assessment using recognized appraisal techniques
36 consistent with USPAP and:
37
38
39
40
41
42
43
44
45
46
47

- 1 i. Excluding any property value increase attributable to viaduct removal
2 and other planned WSDOT Improvements;
3
4 ii. Excluding any value attributable to personal property;
5
6 iii. Taking into account the effects of the COVID-19 pandemic on the
7 value of Taxpayer's property and other relevant developments since
8 October 2019;
9
10 iv. Accounting for and excluding (1) any special benefits from existing
11 or planned improvements that already provide similar benefits to
12 Taxpayer's property, and (2) any special detriments from construction
13 and other anticipated LID-related disamenities;
14
15 v. Accounting for and including only those actual benefits anticipated to
16 accrue to Taxpayer's property based on its location relative to Pier 58,
17 Overlook Walk, and the Promenade, and specific elements of the LID
18 Improvements;
19
20 vi. Discounting anticipated special benefits to present value, based on
21 reliable estimates regarding when special benefits will start accruing
22 following completion of the LID Improvements; and
23
24 vii. Accounting for such other issues specific to Taxpayer's property
25 relevant to calculation of such assessment; and
26
27
28
29
30
31
32
33
34
35
36
37
38

39 2. Grant such further relief as the City Council deems just and proper.
40
41
42
43
44

Dallas, Texas 75254

Re: Seattle Marriott Waterfront / KM Job A20-0090

Dear Mr. Rash:

In February 2020, at your request, we prepared an appraisal of the Seattle Marriott Waterfront, a 361-room full service hotel located at 2100 Alaskan Way in Seattle, King County, Washington. One element of that appraisal was the allocation of value to personal property, defined as furnishings and freestanding equipment. We estimated the cost new of these items at \$30,000/room and accrued depreciation at 50%. As of January 1, 2020, it was our opinion that the contributory value of the personal property of the Seattle Marriott Waterfront was \$5,400,000.

In valuing the personal property of this hotel, we used the same methodology as was applied in our appraisals of 11 hotels in support of their LID assessment appeals. Note that we estimated depreciation at 10% for 2 hotels that recently opened and at 50% for the 9 other hotels.

In the analysis by the city appraiser, the special benefit ratio for the Seattle Marriott Waterfront is estimated at 3.2%. The LID levy ratio for all affected properties is 39.2%. If the personal property of this hotel is excluded from the assessment, the LID levy for that property will be reduced by \$67,738.

Respectfully submitted,

John D. Gordon, MAI, AI-GRS
Certified General Real Estate Appraiser

23 **III. Statement of Taxpayer's Interest and Incorporation of Prior Arguments**

24
25 Ashford Seattle Waterfront LP ("Taxpayer") owns the property that is subject to the
26
27 proposed final assessment described in Section IV.
28

29
30 Taxpayer is amending its appeal as authorized in City of Seattle Resolution 31979 to
31
32 include additional arguments relevant to the revised Final Recommendations of the Hearing
33 Examiner issued on February 1, 2021. On February 4, 2020, Taxpayer timely filed an
34
35 objection to the assessment, which was based on the Final Study. Taxpayer further timely
36
37 filed an appeal of the Hearing Examiner's 2020 recommendations to the City Council.
38
39 Taxpayer maintains and incorporates all objections and arguments raised in its appeal filed
40
41 with the City Clerk on September 22, 2020. Among those are Taxpayer's objection that its
42
43 purported special benefit assessment is dramatically, and irrationally, higher proportionately
44
45 than the assessments proposed against its neighbors. This amendment is a supplement is to
46
47

be read together with Taxpayer's appeal filed on September 22, 2020. Taxpayer incorporates by reference all filings, evidence, and pleadings filed by any party before the Hearing Examiner as authorized by the Hearing Examiner.

IV. Amended Arguments on Appeal

Ashford Seattle Waterfront LP supplements its appeal of the Hearing Examiner's recommendation to deny Taxpayer's objection to the City of Seattle's Waterfront Local Improvement District No. 6751 proposed final assessment dated December 30, 2019 against the following property:

King County Parcel No. 7666202345
Site Address: 2100 ALASKAN WY, Seattle, Washington
Proposed Final LID Assessment for Parcel: \$2,106,827

Ashford Seattle Waterfront reiterates that its assessment percentage is disproportionate to other hotels in its competitive set, as demonstrated in Exhibit 7 to our Statement of Objections, filed on February 3, 2020, shown below for convenience:

LID Map #	Prop Tax	Property Name	Market Value	Market Value	Special	Special Benefit	Ratio
	ID #		w/out LID	with LID	Benefit	% Change	
A-005	766620 2317	The Edgewater	\$95,420,000	\$96,279,000	\$859,000	0.90%	39.18%
C-126	094200 0165	W Hotel	\$182,483,000	\$184,272,000	\$1,789,000	0.98%	39.18%
D-235-001	780292 0010	Hilton Seattle	\$112,852,000	\$113,813,000	\$961,000	0.85%	39.18%
D-245	094200 0430	Renaissance Seattle	\$215,497,000	\$216,570,000	\$1,073,000	0.50%	39.18%
E-110-002 & E-111-001	619500 0030 & 679212 0020	Eliot Grand Hyatt	\$222,002,000	\$225,335,000	\$3,333,000	1.50%	39.18%
			\$165,650,800	\$167,253,800	\$1,603,000	0.97%	39.18%
		<u>Subject Property</u>					
A-014	766620 2345	Seattle Marriott Waterfront	\$167,975,000	\$173,352,000	\$5,377,000	3.20%	39.18%
		<u>Indicated Values Based on Comparables</u>					
A-014	766620 2345	Seattle Marriott Waterfront	\$167,975,000	\$169,654,750	\$1,679,750	1.00%	39.18%

To avoid repetition, Taxpayer incorporates the evidence and arguments raised before the Hearing Examiner and before the City in its September 22, 2020 appeal, into this amended appeal.

1 **A. The Council Should Eliminate Personal Property Assessments for this**
2 **Property**

3 Taxpayer's September 22, 2020 appeal challenged the City's appraiser's and
4 Examiner's recommendation that the City impose special assessments against the value of
5 hotel personal property (furniture, fixtures and equipment), both because personal property
6 is not the type of property that receives a special benefit, and also because the appraiser was
7 not recommending personal property assessments against other types of property - retail,
8 office, residential. On remand, the appraiser recommended, and the Examiner has agreed,
9 that the remanded hotels should not be assessed on the value of their personal property. See
10 Declaration of Robert Macaulay at ¶12 (December 4, 2020) (reducing assessments to
11 account for the value of furniture, fixtures and equipment); Hearing Examiner's Final
12 Recommendation at p. 125 (filed with clerk on Feb. 1, 2021). Taxpayer agrees with that
13 recommended change. However, because Taxpayer's assessment still includes personal
14 property, it leaves Taxpayer's assessment even more disproportionate. It is unfair to assess
15 a few hotels against their personal property while not assessing personal property of other
16 hotels or property types. The value of personal property improperly assessed and the
17 amount by which Taxpayer's assessment should be reduced to eliminate that portion of the
18 assessment is set forth in Exhibit A. See Letter of John Gordon, February 11, 2021.

19 **B. The Anticipated Special Benefits to Taxpayer's Property should be**
20 **Discounted to Present Value and Assessments Adjusted as Appropriate**

21 On remand, the City's appraiser acknowledged that special benefits to parcels can be
22 reduced, even to zero, if those benefits accrue in the future. See Declaration of Robert
23 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
24 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
25 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to

1 the theatre parcel is too remoted to support a current assessment. Id. The Examiner
2 accepted that recommendation. The City’s appraiser further acknowledged that benefit
3 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
4 by discounting to present value. Id.; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
5 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
6 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
7 calculations to present value because the general benefits are not anticipated from the LID
8 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
9 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
10 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
11 benefit calculation, and related assessments, to account for the delay between the assessment
12 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
13 standard appraisal practice, and renders the other proposed Waterfront LID special
14 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
15 “fundamentally wrong methods.”

16 All special benefit taxes assessed by a municipality must be based on “actual,
17 physical and material [special benefits that are] not merely speculative or conjectural.”
18 Heavens v. King Cty. Rural Library Dist., 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
19 Additionally, the assessments may not materially exceed the actual special benefit conferred
20 by the LID Improvements. Id. Further, LID assessments must be proportionate. Id. Failure
21 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
22 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
23 discount benefits the City estimated would accrue to the properties from improvements to be
24 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the

1 appraiser's inconsistent approach, selectively applying discounting to one (that we know of)
2 property while treating all or most others (including Taxpayer's) differently, and
3 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
4 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
5 for some properties because the benefits are too distant, while assessing other properties as
6 though distant benefits have already been secured. As Taxpayer identified in its September
7 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
8 may not accrue for at least five years after they are completed, in 2029. See Gibbons Decl.
9 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
10 reject the improper calculation of the benefit or remand and require the appraiser to discount
11 the benefits to net present value.

23 **C. In Light of Covid's Continuing Impact on Taxpayer and other**
24 **Downtown Property Owners and other Material Changes Since October**
25 **2019, the LID Should be Cancelled, or at Least Assessments**
26 **Recalculated, to take Into Account Property Value Reductions**
27

28 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
29 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
30 other relevant developments since October 2019." When Washington's first COVID
31 restrictions were imposed in March and April 2020, there was an assumption that they
32 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
33 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
34 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
35 gotten much worse. The City has already imposed higher minimum wages and taxes on
36 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
37 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
38
39

42
43
44
45
46
47

1 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
2 years from completion, as a best case. In current circumstances, a downtown tax to fund
3 new, non-essential park improvements against financially strapped taxpayers, and likely
4 passed through to financially strapped tenants and customers would be unfair to taxpayers
5 and a misallocation of city resources. COVID threw everyone for a loop. Hotels in
6 particular are struggling. *See* Declaration of Randy Meyer In Response To City Appraiser's
7 Remand, CWF-0415, Exhs. A-C (Jan. 8, 2021) (demonstrating substantial impact of COVID
8 on hotels). But as the City rethinks its budget priorities for the next few years, and its
9 potentially funding sources, Taxpayer respectfully requests that the City dissolve the
10 assessment, at least until it (and property owners) have a chance to recover, and that any
11 assessment take into account the changed circumstances since this appeal process started on
12 February 4, 2020 to avoid unnecessarily and perhaps permanently killing downtown
13 properties and businesses in the name of bettering them.

26
27 **V. Relief Requested**

28 Particularly in light of the Committee's decision not to take further comment,
29 Taxpayer respectfully request that each Committee member carefully review the record
30 transmitted to Council before voting on our appeal.
31
32
33

34 Ashford respectfully reiterates its request from the September 22, 2020 appeal that
35 the City Council:
36
37

- 38
39 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection;
40 and
41
42 a. Cancel the Waterfront Local Improvement District No. 6751 proposed final
43 assessment dated December 30, 2019; or
44
45
46
47

- 1 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
2 proposed final assessment to \$0 (zero), or such amount as Taxpayer
3 establishes at the hearing in this matter; or
4
5
6
7 c. Remand the matter to the Hearing Examiner or City appraiser to recalculate
8 and reduce Taxpayer's assessment using recognized appraisal techniques
9 consistent with USPAP and:
10
11 i. Excluding any property value increase attributable to viaduct removal
12 and other planned WSDOT Improvements;
13
14 ii. Excluding any value attributable to personal property as demonstrated
15 in Exhibit A;
16
17 iii. Taking into account the effects of the COVID-19 pandemic on the
18 value of Taxpayer's property and other relevant developments since
19 October 2019;
20
21 iv. Accounting for and excluding (1) any special benefits from existing
22 or planned improvements that already provide similar benefits to
23 Taxpayer's property, and (2) any special detriments from construction
24 and other anticipated LID-related disamenities;
25
26 v. Accounting for and including only those actual benefits anticipated to
27 accrue to Taxpayer's property based on its location relative to Pier 58,
28 Overlook Walk, and the Promenade, and specific elements of the LID
29 Improvements;
30
31 vi. Discounting anticipated special benefits to present value, based on
32 reliable estimates regarding when special benefits will start accruing
33 following completion of the LID Improvements; and
34
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 vii. Accounting for such other issues specific to Taxpayer's property
2
3 relevant to calculation of such assessment; and
4
5 2. Grant such further relief as the City Council deems just and proper.

BEFORE THE HEARING EXAMINER
CITY OF SEATTLE

In re Proposed Final Assessment Roll for
Local Improvement District No. 6751
("Waterfront LID")

Case Nos. CWF-0425, 0426, 0427, 0440, AND
0441

DECLARATION OF ED LEIGH

I, Ed Leigh, declare as follows:

1. I have personal knowledge of the facts stated below and am competent to testify regarding the same.
2. I am the Vice President of Investments for Equity Residential. I testified in this appeal as to my position, qualifications and employment history.
3. Eqr-Harbor Steps LLC is owned by Equity Residential. Eqr-Harbor Steps LLC owns a four-tower apartment complex encompassing parcel nos. 1976200070, 1976200075, 1976200076, and 7666202465. These parcels are located at 1306 Western Ave., 1301 1st Ave., 1201 1st Ave., and 1212 Western Ave., Seattle WA, and are the subject

DECLARATION OF ED LEIGH – 1

1 of case nos. CWF-0425, -0426, -0427, -0440. These properties are known as the "Harbor
2 Steps" apartment towers.
3

4 4. Eqr-Second & Pine LLC is also owned by Equity Residential, and owns real
5 property parcel no. 7683890010, which is located at 206 Pine St., Seattle WA, and is the
6 subject of case no. CWF-0441. This property is known as the Helios apartments.
7
8

9 5. Equity Residential appealed the City's proposed final assessment for
10 Waterfront LID No. 6751 for each of the properties described above.
11
12

13 **HARBOR STEPS (CWF-0425, -0426, -0427, -0440)**
14

15 6. The Harbor Steps are multifamily residential apartment buildings with
16 ground floor retail. Additionally, the Harbor Steps are on a pedestrian corridor connecting
17 the downtown retail core to the waterfront amenities.
18
19

20 **HELIOS (CWF-0441)**
21

22 7. Helios is a multifamily residential apartment building located a block east of
23 Pike Place Market, and approximately two blocks from the proposed overlook walk.
24
25

26 **COVID-19 Calculations**
27

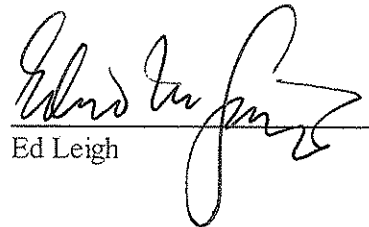

28 8. After we appealed our assessments, the Covid-19 pandemic broke out,
29 causing significant disruptions in Seattle and around the world. Based on our current rents,
30 compared with Brian O'Connor's appraisal calculations to support our appeals, our
31 properties have decreased in value in the range consistent with those described by John
32 Gordon. In Mr. Gordon's April 21, 2020 Declaration, he noted that property values for
33 hotels in Downtown Seattle would be at least 10% to 15% lower when compared with the
34 values as of October 2019 and January 2020. The same is true for our properties. The year-
35 over-year rent reductions that I have observed in our Downtown Seattle assets are consistent
36 with Mr. Gordon's valuation reduction, assuming that rents do not quickly rebound. We
37
38
39
40
41
42
43
44
45
46
47

DECLARATION OF ED LEIGH - 2

1 have not marked-to-market with these assets yet, as this is an end-of-year process for us, but
2
3 the 12.5% average Covid-19 discount is our best generic estimate at this time, based on the
4
5 information available to us.
6

7 I declare under penalty of perjury under the laws of the State of Washington that the
8
9 foregoing is true and correct.
10

11 Signed at Seattle, Washington, on September 21, 2020.

Hearing Examiner File No. CWF-0440

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON EQR-HARBOR
STEPS LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
7666202465

32
33 Eqr-Harbor Steps LLC (“Harbor Steps”) files this appeal pursuant to RCW
34 35.44.070, Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice
35 of the Seattle Office of the City Clerk dated December 30, 2019, and the Hearing
36
37 Examiner’s Findings and Recommendation issued September 8, 2020 (“Examiner’s
38
39 Recommendation”).
40
41
42

43 **I. Taxpayer / Appellant**

24 Telephone: 206.359.8000
25 Facsimile: 206.359.9000
26
27

28 **III. Statement of Taxpayer's Interest**
29

30 Harbor Steps owns the property that is subject to the proposed final assessment
31 described in Section IV. The property at issue is a multifamily residential apartment building
32 with ground floor retail. Additionally, there is a pedestrian corridor connecting the
33 downtown retail core to the waterfront amenities.
34
35

36 The basis of the proposed assessment is a Final Special Benefit/Proportionate
37 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
38 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
39 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
40 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
41
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which was
22
23 based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Harbor Steps appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 7666202465
34 Site Address: 1212 Western Ave., Seattle, Washington
35 Proposed Final LID Assessment for Parcel: \$1,289,878.02

36
37 See Examiner’s Recommendation at 61-62, 107. To avoid repetition, Taxpayer incorporates
38
39 the evidence and arguments raised before the Hearing Examiner into this appeal. In
40
41 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
42
43 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 107, Sections II.6, II.7, II.13, II.14, II.15, II.18, II.19, II.20, II.21, II.22, II.23,
8 II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3,
9 IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.3, IV.C.4, IV.C.5, IV.C.7, IV.C.8, IV.C.9,
11 IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38
39

40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29
30

31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$3,292,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City's appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
5 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS's appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
16 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
17 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
18 the City's appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City's promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT's planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
35 or conjectural"
36

37
38 **ABS Study:** Not only are the improvements not yet "physical or material," but
39 environmental review and permitting for the City's proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City's then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
2 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
3 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
4 Final Study fails to meet basic standards for admissibility and must be remanded.
5
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6 **V. Standard of Review**

7 “When considering the assessment roll, the city council sits ‘as a board of
8 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
9 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
10 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
11 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
12
13
14
15
16
17

18 The proposed assessments are presumed correct, “unless overcome by clear, cogent
19 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
20 than the heightened presumption of correctness on judicial appeal because “applying these
21 elevated standards at the municipal hearing would afford unwarranted deference to a report
22 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
23 presumption is not evidence and its efficacy is lost when the other party adduces credible
24 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
25 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
26 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
27 presented credible evidence showing that the City’s proposed assessment is arbitrary,
28 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
29 to the City to prove the assessments are actual, measurable, special, non-speculative and
30 proportionate. The City failed that burden.
31
32
33
34
35
36
37
38

1 **VI. Grounds for Appeal**

2 Harbor Steps appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Decl. of Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of
12 Ben Scott ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO Closing
13 Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have explicitly
14 rejected an argument that, because certain protestors 'failed to offer expert testimony at the
15 city council hearing[,] the presumptions [in favor of the assessment] were still operative as
16 to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail Trunk Sewer*, 35
17 Wn. App. at 843); *see also Kuskys v. City of Goldendale*, 85 Wn. App. 493, 933 P.2d 430
18 (1997) (although appraiser did not submit an appraisal, he provided expert opinion showing
19 that improvements actually diminished value of the property). In fact, no independent
20 evidence is required at all if, for example, objectors show that the assessment was grounded
21 on a fundamentally wrong basis due to an error in the City's appraiser's methods—as is the
22 case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of Everett*, 114 Wn. 2d 88,
23 106, 786 P.2d 253 (1990)). As a simple example, a property owner could simply point out
24 that the square footage assumed in the City's appraisal was incorrect.
25

26
27 2. On March 5, 2020, Harbor Steps presented testimony from experts Ben Scott
28 and Brian O'Connor. The Hearing Examiner failed to meaningfully respond either the expert
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 testimony or the expert appraisal reviews. Instead, the Hearing Examiner simply dismissed
2 Harbor Steps' expert evidence as insufficient appraisal evidence. *See* Examiner's
3 Recommendation at IV. C.7–9. This is contrary to law.
4

5
6 3. For these reasons, Taxpayer appeals the following portions of the Examiner's
7 Recommendation: Sections II.13, II.14, II.15, IV.A, IV.B.11(a), IV.C.7, IV.C.8, IV.C.9, and
8 IV.C.11.
9

10
11
12 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

13
14 4. RCW 35.43.040 provides cities and towns authority for ordering local
15 improvements and for levying and collecting special assessments “on property specially
16 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed upon
17 all the property in accordance with the special benefits conferred thereon.” RCW 35.44.010.
18

19
20 5. No analysis of general benefits. Special assessments have been “held valid
21 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
22 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
23 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
24 they are for the construction of local improvements that are appurtenant to specific land and
25 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
26

27
28 6. Harbor Steps' property is not specially benefited by the LID Improvements.
29 The primary purpose and effect of the LID Improvements are to benefit “members of the
30 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
31 library is for the benefit of the members of the whole community individually and
32 collectively who may be served by it”). Mr. Macaulay's own chapter of the LID Manual
33 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
2 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
3 that if an appraiser “identifies both general and special benefits, these benefits should be
4 clearly distinguished and explained, and only special benefits should be included in the
5 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
6 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at 158:13-
7 159:8, 192:8-193:2. It is undisputed that Mr. Macaulay did not analyze or measure general
8 benefits, including those arising from construction necessary to meet basic design standards.
9 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
10 construction costs related to meeting design standards which may be general benefits as
11 distinct from construction costs emanating from requirements of the LID project”). To the
12 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
13 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
14 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
15 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31 7. LID Improvements not necessary. Unlike typical LID projects, the
32 Waterfront LID improvements are largely unnecessary to the functionality of any particular
33 property, including Taxpayer’s property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
34 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
35 held invalid where owners would have benefitted equally from increase of only 9 feet);
36
37
38
39
40
41

42
43 ² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
2 intersection for new water main for hydrant held invalid because land was already afforded
3 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
4 not necessary to the business of their income-producing properties, all of which already have
5 sufficient access to the waterfront, downtown restaurants, and other amenities necessary for
6 their tenants and clients. And for residential properties, like Harbor Steps, the assumption
7 that an increase in tourism will cause lifts in property value is both anecdotally and
8 empirically unsupported. Additionally, the construction of new access points is in fact a
9 negative point for the Harbor Steps, which are located at an existing connection between the
10 downtown core and the waterfront. The LID improvements will draw foot traffic away from
11 the Harbor Steps, increasing competition in other areas of the city. The fact that there is no
12 case law differentiating between binary improvements and parks does not change the law
13 prohibiting assessments on properties already adequately served by existing amenities. *See*
14 Examiner's Recommendation at IV.C.3 (reasoning that "no case law is provided to support
15 the differentiation between a hardscape benefit and the more ephemeral benefits of park").
16 Nor does the Examiner's reasoning excuse the City's failure to account for existing
17 amenities as part of the special benefit calculation. As Dr. Crompton testified, existing view
18 amenities may in fact diminish the incremental effect of new park improvements on the
19 value of properties, much like turning on a weak light in an already brightly illuminated
20 room. *See* Hrg. Exhibit 94 (Crompton's Report) at 12-13.

21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41 8. To the extent benefits can be considered "special" as opposed to general, they
42 are nominal or nonexistent for many properties even in the Central Waterfront, which
43 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
44 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
45
46
47

1 change due to expansion of sewer service *near* owners' parcel which were already
2 connected). Here, the primary reasons a user chooses a particular apartment is not proximity
3 to the waterfront. Instead, the reason residents choose to live in the Harbor Steps apartments
4 is proximity to their places of employment and other amenities downtown. See 3/5/2020 (E.
5 Leigh0 Hrg. Tr at 113:13-114:20; 124:3-126:9. For example, without any supporting written
6 analysis, Mr. Macaulay offhandedly concludes that the Harbor Steps apartments would
7 benefit from increased connectivity from being four to five blocks from the Overlook Walk
8 even though the properties currently have direct access to the waterfront via the Harbor
9 Steps. 6/23/2020 Hrg. Tr. At 48:1-50:25; see also B. Scott Decl., ¶ 7. Mr. Leigh testified that
10 he did not anticipate a benefit, and that the Harbor Steps retail component would suffer if a
11 measurable portion of waterfront-bound pedestrian traffic moved north to the market. See
12 also B. Scott Decl., ¶ 6 (describing failure to analyze how existing retail is harmed by foot
13 traffic being pulled away towards new amenities). Even if the City could assess for a view
14 change (and it has promised not to assess for viaduct removal), the fair market value of
15 Harbor Steps' property has not changed because the LID Improvements have not improved
16 the property's waterfront view or access to the waterfront, nor will they when the City
17 anticipates completion in 2024. For these reasons, Taxpayer appeals the following portions
18 of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37 9. No analysis of special detriments. The Final Study fails to properly account
38 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
39 owners for removal and cleanup of underground storage tanks discovered during the
40 improvement project). The Property owner representative for Harbor Steps, Ed Leigh,
41 testified that property values may in fact be negatively impacted by the LID Improvements
42 due to loss of parking, increased traffic and noise, and increased potential for crime,
43
44
45
46
47

1 homelessness and sanitation issues. Mr. Leigh testified that the assessment is an immediate
2 expense for Harbor Steps that comes with no immediate increase in revenue, thereby
3 decreasing property values. See 3/5/2020 (E. Leigh) Hrg. Tr. at 126:10-129:9; 227:8-229:10.
4
5 And Harbor Steps does not expect near term the increases assumed in ABS Valuations'
6
7 spreadsheets or the Final Study. Although Mr. Macaulay claims he analyzed impacts on the
8
9 City's planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no
10
11 explanation of how lost parking might be a detriment, and no property-specific parking
12
13 analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12.
14
15

16
17 10. Likewise, there was no analysis of the risks associated with disamenities such
18
19 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
20
21 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
22
23 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
24
25 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
26
27 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
28
29 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
30
31 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
32
33 the maintenance agreement. *Id.* at 13:4-14:2.
34

35 11. There was also no consideration of negative impacts from another four-plus
36
37 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
38
39 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
40
41 law allowing him to dismiss these actual, non-speculative impacts. Because future special
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 benefits calculations are inherently speculative, Washington's eminent domain statute
2 specifically allows condemnees to postpone special benefits assessments until improvements
3 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
4

5
6 Moreover, the studies that Mr. Macualay relied on demonstrate that construction disamenity
7 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
8 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
9 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
10 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
11 II.25, IV.B.8, and IV.B.9.
12

13
14 12. Special benefit estimate is speculative. When calculating a special benefit,
15 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
16 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
17 becomes pure speculation." *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
18 P.2d 1078 (1958)).
19

20
21 13. Assuming without conceding that one day, the City's planned LID
22 Improvements might increase the value of neighboring properties to some extent, that
23 potential benefit is many years away and speculative. While appraisers tolerate some degree
24 of estimation and judgment, Taxpayer's expert testified that Mr. Macaulay's Final Study is
25 far too speculative to satisfy industry practices and standards.
26

27
28 14. Although LIDs are sometimes finalized prior to completion of improvements,
29 this is typically just six month or a year prior, and the assessments are otherwise supported
30 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
31 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
32 will not be realized for four or five years. In the meantime, there is permitting risk,
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
2 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
3 and to what extent, different factors will impact value. *Id.* at 51:13-53:5. Ultimately, Mr.
4 Macaulay concedes that there is inherent uncertainty in valuing the future delivery of
5 projects because "we can't read the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he
6 testified: "I just don't know what the market value would be as of the date the project would
7 be finally constructed" because "[t]here could be a lot of elements in the market that did
8 occur between now and then that impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.*
9 at 211:8-20 (no way to know if his estimates will be higher or lower than comparable sales
10 in 2024 because "markets tend to fluctuate over time" and "I can't predict the future").
11
12
13
14
15
16
17
18
19
20

21 15. The record is clear that while no one can know what "special benefit" might
22 accrue to these properties in four years (if any), we do know that there are no actual benefits
23 now. The LID improvements provide no immediate special benefit to property owners
24 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
25 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
26 sewer system for future users). For example, notwithstanding the questionable hypothesis
27 that apartments will benefit from an expected increase in tenant interest when the
28 improvements are complete, it is undisputed that tenants are not coming in larger numbers
29 and paying higher rental rates now because of something happening five years down the
30 road. See O'Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased
31 today for 18 months would rent at a higher rate due to improvements coming in 2024).
32
33
34
35
36
37
38
39
40
41

42 16. Further, there are no "plans and specifications" on file with the Clerk's Office
43 for the LID Improvements, and it is unlawful to move to final assessments without such
44 "plans and specifications." Ordinance 125760, Section 3; *Local and Road Improvement*
45
46
47

1 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
2
3 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
4
5 dollars on projects still early in the design process. *See* Washington Attorney General
6
7 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
8
9 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
10
11 of programs and included “only so much of the overall costs” that took place within and
12
13 benefitted the assessed properties).

14
15 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
16
17 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
18
19 anticipated to be delivered five years later. Even before COVID, it was speculative to
20
21 assume that market highs experienced in October 2019¹ would be sustained through 2024,
22
23 after an already extraordinarily long expansion period. *See, e.g.*, 3/5/2020 (E. Leigh) Hrg.
24
25 Tr. at 119:15-123:6; 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr.
26
27 Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have
28
29 thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his
30
31 deposition in late February, his “thought process was that the market was going to continue
32
33 to go up,” but now, they are already irrelevant. *Id.*; *see* Gibbons Decl. ISO Closing Stmt. at ¶
34
35 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019
36
37 (*see* Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
38
39 rendered the hypothetical October 2019 Final Study valuations outdated.

40
41 18. As another example of how future events could affect the accuracy and
42
43 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
44
45 Examiner re-open the record to allow the City to explain whether the assessments against
46
47 property owners within the LID are, in fact, being used by the City to fund the emergency

1 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
2 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
3 would be improperly imposing costs on property owners within the LID for improvements
4 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
5 habitat and City infrastructure—this does not provide any special benefit to LID property
6 owners.
7
8
9
10
11

12 19. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
19 potential delays and project changes inherent in those processes, that call into question the
20 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
21

2 Decl., dated 4/15/2020).
3

4
5 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
6 he could not point to a single one where the assessment roll was finalized five years in
7 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
8 he has never recommended final special assessments based on designs less than 30 percent
9 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
10 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
11 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
12 at 66:17-25. He performed no independent due diligence to determine the reliability of the
13 City’s estimates for completion of the LID Improvements, or to ensure that proposed
14 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
15 agreed that if any of his assumptions are incorrect, his opinion of market value would need
16 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
17 68:11-18.
18
19
20
21
22
23
24
25
26
27
28
29

30 21. The City has cited no authority—and Taxpayer is aware of none—that
31 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
32 assess taxes for “actual” special benefits that will not accrue for another five years (if all
33 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
34 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
35 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
36 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
37 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
38 IV.C.14, and IV.C.18.
39
40
41
42
43
44
45
46
47

1 22. Failure to discount special benefit estimates to account for risks and present
2 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
3 have accounted for risks associated with delivery of the improvements (including permitting
4 risk, construction risk, general economic risk) and any special damages associated with
5 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
6 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
7 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
8 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
9 the impact of future conditions [through] discounted cash flow analysis.").

10 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
11 future condition not in place at the date of valuation and can discount for the time value of
12 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
13 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
14 Discounting would also have been consistent with his approach for analyzing special
15 benefits to vacant land. He testified that the difference between similarly situated vacant
16 sites slated for development and already developed sites was that the labor, capital and risks
17 associated with development had not yet been borne for those vacant sites. Therefore, the
18 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
19 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
20 fully permitted, has not completed environmental review, and has not reached full design is
21 presently worth significantly less.

22 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
23 present value, an appraiser would consider discount rates for land development to account
24 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at

1 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer to
2 the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
3 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
4

5
6 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
7 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
8 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
9 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
10 ignoring momentarily all of the other methodological and other flaws discussed here and in
11 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
12 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
13 exceeds special benefits when reduced to present value. Further, to the extent the City is
14 arguing that because they are permitted to assess 100% of the special benefit, the special
15 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
16 is again wrong. After applying proper discounting, the City's proposed special benefit
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18 100% of the total estimated special benefit.
19
20

21 26. But even the assumption that the LID improvements would deliver benefits
22 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
23 on. Rather, those studies demonstrate that a discount period of five years is conservative.
24 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
25 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
26 indicates that during the construction period, the Greenway district "significantly" lagged in
27 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
28 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 30-31 (discussing New York City High Line and San Francisco Embarcadero
2 improvements). Given the lengthy delay, any prediction of future special benefits is
3 speculative, especially during the construction phase where values are likely to decline. And
4 assuming the LID Improvements take a similarly long period of time after they are complete
5 to start producing tangible property value benefits, each additional year of delay results in
6 further discount to the present value of any future alleged benefit. Gibbons Decl. ISO
7 Closing Stmt., ¶ 19, Ex. A.
8

9
10 27. Applying the same discounting methods described above and in Mr. Gibbons
11 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
12 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
13 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
14 100% assessment should be no more than \$310,106.40. Anything more would permit the
15 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
16 place and providing benefit, and ignore the risks, construction disamenity, and time value of
17 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
18 would counsel that the assessment should be only 39.2% of that assessment cap, or
19 \$121,561.71.
20

21 28. Attachment C includes two Excel spreadsheets applying these discounting
22 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
23 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
24 demonstrates that discounting the City's hypothetical October 2019 special benefits to
25 present value would reduce Taxpayer's assessment to \$442,541 exclusive of any other flaws
26 in the City's proposed assessment. The second spreadsheet shows even more drastic
27 reductions after taking into account (1) Taxpayer's exerts' estimated "Before" valued based
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4
5 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
6
7 the time it takes for the improvements to capture property value.) After such reductions,
8
9 Taxpayer's assessment would be just \$316,107 (for the 5-year discount) or \$86,855 (for the
10
11 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
12
13 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
14
15 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
16
17 Taxpayer's discounting argument without legal or factual analysis; that failure is error.

18 **Appraisal and Assessment Calculation Methods Are Flawed**

19
20
21 29. The "general rule is that each lot, piece, or parcel of land should be assessed
22
23 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
24
25 Wn.2d at 97.

26
27 30. It is proper to sustain a challenge to an assessment, even without the appraisal
28
29 testimony from the owner, where the objector's expert establishes that the assessment was
30
31 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
32
33 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.

34
35 31. The City's appraiser purports to utilize the income method of valuation but
36
37 relied on inaccurate revenue and market data, as discussed further below.

38
39 32. The City's appraiser purports to utilize the comparable sales method of
40
41 valuation, but no City witness attempted "to characterize any one, or all of them, as
42
43 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
44
45 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
46
47 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to

1 characterize any one, or all of them, as comparable to any particular property within the LID”).
2
3 And no City witness could explain how specific adjustments were made to these sales to
4
5 account for value increases due to the hypothesized Before and After Improvements. For this
6
7 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
8

9 33. Special assessment improperly includes value lift from the Before
10 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
11
12 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
13
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15
16 Macauley did not calculate the actual market value of LID properties in October 2019 and
17
18 did not separately analyze the hypothetical increase to property values attributable to
19
20 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
21
22 current value and then separately calculate a hypothetical “With WSDOT” Before value);
23
24 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
25
26 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
27
28 Petition) at 3-4. Without any documented basis or support, Mr. Macauley simply “ma[de] a
29
30 judgment a call” on what occupancy and rates would have been for the commercial
31
32 properties assuming all of the WSDOT Improvements are completed as of 2019. Macauley
33
34 Depo. at 129:19-130:11. For example, Mr. Macauley surmised that Brian O’Connor’s
35
36 conclusion that the “Before” value for Harbor Steps was overstated by \$88M was perhaps
37
38 due to the fact that Mr. O’Connor was looking at current income numbers and not
39
40 accounting for the value of the “Before” conditions. However, when asked whether the
41
42 value of the of the “Before” conditions is lower or higher than \$88M, Mr. Macauley had no
43
44 clue because he did not do this analysis. 6/23/2020 Hrg. Tr. at 46:9-17:25. This outright
45
46 omission precludes any independent evaluation of the true market “Before” values. *See*
47

1 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards; if an
2 appraiser uses current sales data to infer values, then the appraiser must explain how he
3 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
4 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
5 other road, pedestrian and landscaping improvements WSDOT had already committed to
6 make.
7

8
9
10
11
12 34. However, because Mr. Macaulay testified that he did include some WSDOT-
13 related value-lift in the “Before” values, it follows that part of the special assessment
14 improperly is based on value attributable to the WSDOT Improvements. As shown by
15 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
16 percentage to Before values. So, for example, if Mr. Macaulay believed the WSDOT
17 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
18 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
19 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
20 to properly exclude the value of Before Improvements from the assessments. For these
21 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
22 Sections II.19, II.29, and IV.B.11(a)(ii)
23

24
25 35. Special benefits were assigned rather than measured. Mr. Macaulay
26 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
27 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/5/2020 (B.
28 O’Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
29 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
30 commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based adjustments
31 on hypothesized very small increases to property revenue and very small reductions to cap
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 rates to “calculate” an “After” value due to the coming 2024 LID Improvements.

2 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
3
4 “professional judgment” that are neither shown nor replicable.
5

6 36. For these reasons, Taxpayer appeals the following portions of the Examiner’s
7
8 Recommendation: Sections II.19 and IV.B.11(a)(iii).
9

10 37. Special benefit falls within margin of error. The Final Special Benefit Study
11
12 applies an estimated value enhancement of less than 4%, which is generally within the
13
14 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
15
16 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
17
18 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
19
20 of one another, this difference is considered reasonable as it falls within the standard margin
21
22 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
23
24 O’Connor) Hrg. Tr. 201:7-204:8. Because Mr. Macaulay’s micro-special benefit percentages
25
26 fall far below that 5% margin, “there is no way of authenticating” such incremental changes
27
28 because “[m]arket forces completely obliterate any tiny little noise factor like that.” *See*
29
30 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed during his deposition
31
32 that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Additionally, the fact that
33
34 “Before” values are also based on a hypothetical that adds some unstated incremental value
35
36 to actual 2019 values exacerbates this issue—the ability for an appraiser to discern the
37
38 micro-value differences between hypothetical conditions that are so similar (the WSDOT
39
40 improvements compared to the LID improvements) “verges on being ludicrous.” 3/3/2020
41
42 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
43

44 38. Even if it were possible to accurately tease out such a miniscule hypothetical
45
46 value change due to improvements coming five years later, experts testified that there is no
47

1 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
2
3 what he felt the changes (hypothetically) would be. *See* 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 39. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 40. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 41. Special assessment is not supported by comparable studies, data or reports.

25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for residential and commercial combined properties,
30 including Taxpayer’s property. For example, although Mr. Macaulay stated that no single
31
32
33
34
35
36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 report or study was directly on point due to the unique nature of the LID Improvements (*see*,
2 *e.g.*, 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific
3 adjustments in his parcel-by-parcel analysis other than to say that the studies generally
4 provided “some background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12;
5 *see also* 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account
6 for similarities and differences between these improvements and the comparable parks he
7 looked at).
8

9
10 42. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
11 assignment of incremental increase of 0.5% to 4% to property values within the LID.
12 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
13 research misinterprets his work in critical ways, including because the LID Improvements
14 manifest the characteristics of a parkway (not a park), and his research indicates that most of
15 a *park*’s impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
16 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
17 related value increases are in fact smaller; that estimated increases are “best guesses” rather
18 than predictions of property value increases in a particular city; and that percentages do not
19 account for diminishing returns after taking into account water views, which would be the
20 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
21 topography grants most properties in downtown a water view.
22

23
24 43. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
25 that this was just one source of information that was not entirely relevant because, among
26 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
27 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
28 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3
4 Crompton concluded that 500 feet via road from “park” improvements is just one or two
5
6 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
7
8 significantly beyond that which the park study indicated (even if it was legitimate to use the
9
10 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
11
12 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
13
14 impact applicable to “community parks”—which the LID Improvements are not. *Id.*

15
16 44. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
17
18 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
19
20 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
21
22 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
23
24 materials, it was clearly an important—if not *the* most important—source of information for
25
26 estimating special benefits (especially with respect to the condos).⁷ No City witness
27
28 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
29
30 parcel-by-parcel analysis.
31

32
33 45. The destination parks discussed in the Final Special Benefit Study do not
34
35 provide reliable, comparable, and valid support for the calculation of special assessments
36
37 here. *See* Gibbons 5/2/2018 Letter at 4. None of the parks cited in the Final Special Benefit
38
39 Study were funded by a LID. And in virtually all of those cases, the park improvements
40

41
42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 dramatically restored unimproved or blighted areas, and properties evaluated were within
2
3 two or three blocks of the park.

4
5 46. ABS's claimed reliance on three economic studies to support property value
6 increase is also flawed. The HR&A study does not inform what value increases are
7
8 expected from the LID Improvements because it projects increases to tourism from *all* of the
9
10 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
11
12 dissimilar parks in other cities,⁸ making the methodological application to the LID
13
14 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
15
16 conclusion that there would be *no new net visitors* from downtown residents as a result of
17
18 the LID Improvements and could not explain how this impacted his condo analysis.
19
20 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
21
22 Property Values" primarily focused on whether the benefits accrue to the larger community
23
24 rather than properties adjacent to the park. And the 2014 New York City Department of
25
26 Transportation study is not based on real estate transactions and market sales and fails to
27
28 substantiate any link between increased retail sales and property values. Moreover, this
29
30 study only looked at impact either directly abutting the streetscape improvement, or a couple
31
32 hundred feet for plaza-like improvements.
33

34
35 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
36
37 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
38
39 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
40
41

42
43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
2 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
3 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
4 asked whether he considered that HR&A’s estimated LID impact is six times greater than
5 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
6 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
7 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
8 assumptions to account for this difference, which may be partly explained by the fact that
9 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
10 approximately 3.44% of King County tourists visit Seattle primarily because of the city
11 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
12 waterfront improvements.

13
14
15
16
17
18
19
20
21
22
23
24
25 48. Although proximity to the improvements is a key factor in all of these
26 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
27 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
28 not understand that for both the Trust for Public Lands study and Dr. Crompton’s study,
29 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
30 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
31 Improvements is approximate 20 acres and it is not a community park.⁹

32
33
34
35
36
37
38
39 49. There is no explanation in the Final Study or the supporting materials of how
40 the studies or comparable sales were used to derive values for Taxpayer’s property. For
41

42
43
44
45 ⁹ *See*
46 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf (“Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle’s central waterfront to downtown.”).

1 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2
3 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

4
5 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
6
7 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
8
9 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
10
11 recognized) for developing the MAI standards for mass appraisals, testified that the Final
12
13 Study does not meet mass appraisal standards nor allow for independent assessment of the
14
15 accuracy of Mr. Macauley's conclusions.

16
17 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
18
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20
21 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
22
23 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
24
25 testimony suggests that he incorrectly believed that the only difference between direct
26
27 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
28
29 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
30
31 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
32
33 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
34
35 Gordon uses in doing his limited restricted report").

36
37 52. But the difference is not only in reporting—mass appraisal techniques must
38
39 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
40
41 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
42
43 parcel approach:

44
45 The mass appraisal technique is an appraisal method used to evaluate
46
47 a group of properties that are subject to similar market forces as of a
certain date through the use of market data, statistical analysis and

1 testing. As a result, the mass appraisal technique does not require or
2 involve analysis of each individual property's specific data.
3

4 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
5
6

7 53. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
8 universe of properties as a given date using standard methodology, employing common data,
9 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
10 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
11 model" is "a mathematical expression of how supply and demand factors interact in a
12 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
13 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
14 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
15
16
17
18
19
20
21
22

23 54. Regardless of client direction, Mr. Macaulay is required to comply with
24 USPAP. So, if, as he determined, a "[p]arcel-by-parcel direct appraisal" would not have
25 been economically feasible because it would have taken "an incredible amount of time and
26 cost" (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an
27 appraisal consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8
28 ("performing an individual appraisal of each [condo] parcel would have been cost and time
29 prohibitive").
30
31
32
33
34
35
36

37 55. But Mr. Macaulay's methods fail to comply with USPAP Standards 5 and 6
38 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
39 value, fails to calibrate the model structure to determine the contribution of the individual
40 characteristics affecting value, and does not review the mass appraisal results against actual
41
42
43
44
45
46
47

1 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
2
3 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

4
5 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
6
7 proximity to the elements, the increase in market rent, market vacancy changes,
8
9 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
10 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
11
12 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
13
14 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
15
16 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
17
18 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
19
20 were hypothetical, it was not possible to identify matched pair sales and no City witness
21
22 explained how ABS Valuation made adjustments to “comparable” sales in order to check
23
24 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
25
26 him to explain his model structure.
27

28
29 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
30
31 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36
37 relationship between characteristics that affect value, and to calibrate that model to specify how
38
39 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
40
41 21). The purpose is to rationally determine what characteristics will create value, and by how much.
42
43 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
44
45 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
46
47 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
include explanation of the model specification, data requirements, calibration methods, and
mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
(o). Without this reporting, it is impossible for users of the appraisal report to determine how the
appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
Hrg. Tr. at 206:15-207:17.

1 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
2
3 and appeals the Examiner's denial of that motion.
4

5 58. Finally, Taxpayer's property is not appurtenant—or even in close
6
7 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
8
9 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
10
11 close proximity to the property on which expert testimony was given”). As described above,
12
13 the special assessment is overstated because the Final Study makes no attempt to determine
14
15 general benefits, existing amenities for Taxpayer's specific property, or special detriments.
16
17 In addition, it is speculative due to the fact that, as of October 2019, improvements were not
18
19 in in place—and, in fact, much of the waterfront is a construction zone following removal of
20
21 the viaduct and now Pier 58 demolition. Under these circumstances, rather than relying on
22
23 entirely imaginary income and shaky hypotheticals, Mr. Macaulay at the very least should
24
25 have discounted the special benefit estimates or waited to perform the Study until the
26
27 improvements were at least close to complete.
28

29 **Erroneous Pre-Improvement Valuation**

30
31 59. The proposed final assessment erroneously overstates the pre-improvement
32
33 value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special
34
35 benefit to the Taxpayer's property.
36

37 60. The City's Final Study was used to compute the proposed final assessment of
38
39 Harbor Steps' property. The City's Study purportedly uses data from the King County
40
41 Department of Assessments,¹¹ but the pre-improvement valuation information in the Final
42
43

44
45 ¹¹ *See, e.g.*, Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet
46 (providing a “County Link” to the King County Department of Assessment's online “eReal
47 Property” search tool).

1 Study does not accurately reflect this data. For example, the City's Study values Harbor
2 Steps' property at \$119,788,000 as of October 1, 2019. However, the King County assessor
3 determined the true and fair value of the property to be \$104,903,000, valued in 2019 for tax
4 year 2020. In other words, the Final Special Benefit Study's valuation is 114.2% of King
5 County's assessed value. The Final Special Benefit Study does not explain this difference—
6 or any differences—between its pre-improvement valuation and its supposed source for
7 market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
8 Recommendation.
9

10
11
12
13
14
15
16
17 61. Further, the City's analysis was based on unreliable market data. The ABS
18 appraisal overstated the combined total before market value for all four Harbor Steps'
19 parcels by about \$88 million. B. O'Connor's Jan. 31, 2020 Report (attached to Appeal
20 Petition), Ex. 6. Based on our expert appraiser's appraisal review, the true and fair value of
21 the property here as of October 1, 2019 was \$97,788,000. *Id.* (Assuming equal value
22 between all parcels).
23
24
25
26
27

28
29 62. Thus, aside from multiple other reasons why computation of the special
30 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
31 improvement values that do not accurately reflect market data. For these reasons, Taxpayer
32 appeals the following portions of the Examiner's Recommendation: Sections II.13, II.14,
33 and II.15.
34
35
36
37
38

39 **Erroneous Computation of Special Benefit**

40
41 63. "Special benefit" is "the increase in fair market value attributable to the local
42 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
43 may receive by reason of the improvement is not measured alone by the physical character
44 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
45
46
47

1 of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
2 the particular tract or property benefited by the entire improvement, and is it assessed
3 proportionately with the other property included within the assessment district?” *Id.* 165–
4
5 66.
6
7

8
9 64. The proposed final assessment erroneously overstates the special benefit of
10 LID improvements in a number of ways.
11

12
13 65. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
14 the Harbor Steps, Mr. Macaulay assumed room/rental rates would increase by 2.50% (low)
15 and 3.25% (high) due to the 2024 LID Improvements. Mr. Macaulay then uses these same
16 percentages (2.50% and 3.25%) to increase retail and parking. He then uses this
17 hypothesized increased revenue to calculate a new net operating income for the commercial
18 properties and capitalizes that to come up with an “After” valuation.
19
20

21
22 66. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
23 operating income remains the same as in the hypothetical “Before” condition but changes
24 the cap rate. For the Harbor Steps, the cap rate goes from 4.10% to 3.97% (low scenario,
25 creating a bigger value increase) and 4.00% (high scenario, creating a lower value increase).
26
27

28
29 67. Mr. Macaulay then averages his four “After” values to arrive at a final special
30 benefit conclusion. For the Harbor Steps, this is an increase in property value of 2.75% due
31 to the LID Improvements.
32
33

34
35 68. Mr. Macaulay offered little justification for his micro adjustments to revenue
36 and capitalization rates. When asked precisely what the basis is for his special benefit
37 percentage increases to revenue for each commercial property, he could not point to
38 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
39 is nothing in the report to allow a reader to understand how he came up with these
40
41
42
43
44
45
46
47

1 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
2
3 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
4
5 the basis for his belief that certain factors—liked increased connectivity—will increase
6
7 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
8
9 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
10
11 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
12
13 sources equally even though there was no separate analysis done for food and beverage or
14
15 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
16
17 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
18
19 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
20
21 properties.

22
23 69. Mr. Macaulay testified that he used comparable sales as a reasonableness
24
25 check for commercial properties. But as explained above, no City witness has explained
26
27 how anyone, or all, of the sales are comparable to any particular commercial property within
28
29 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
30
31 in order to make sales “comparable,” he would have had to make adjustments to account for
32
33 Before and After conditions, but there is no way to understand how adjustments were made
34
35 because he “didn’t do a separate sales comparison approach where we showed adjustments
36
37 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
38
39 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
40
41 *Id.* at 127:10-128:24.

42
43 70. It also bears noting that any “internal review” of the special benefit estimates
44
45 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
46
47 error. Indeed, given all the same information, he seemed to suggest that it would be

1 perfectly reasonable for another experienced appraiser to come up with special benefit
2 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
3 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
4 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
5 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
6 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
7 margin of error (5%) is a "rule of thumb" and not a "hard legal standard," there are still
8 reasonable and unreasonable variations within the appraisal field. *See Examiner's*
9 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
10 special because it is arbitrarily assigned; and it is too small to realistically be supported by
11 appraisal techniques.
12

13 71. No evidence of special benefit. Meanwhile, there is "no actual evidence from
14 any seller or purchaser that the price was higher because of the LID improvements."
15 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser "has not
16 identified any seller or buyer, or any particular property where the existence of the LID
17 improvements had an effect on the market price." *Id.* at 410-11. Meanwhile, Taxpayer has
18 explained that the property has not increased rental rates or revenue due to the forthcoming
19 LID Improvements, because, among other reasons (and apart from COVID), the
20 improvements ABS believes will generate value do not exist and will not for a number of
21 years to come. There are no comparable sales because the LID Improvements are not in
22 place, nor will they be until the end of 2024 if completed on schedule.
23

24 72. The fair market value of Harbor Steps' property has not changed due to
25 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
26 benefited from installation of new water main and fire hydrant where it was already
27
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 adequately supplied with water and afforded adequate fire protection). And in any event,
2 any value attributable to removal of the viaduct was to be excluded from the assessment
3 calculation.
4

5
6 73. There is no special benefit to the Harbor Steps because its apartment demand
7 is driven by proximity to downtown job centers. In fact, the LID improvements diminish the
8 value of Harbor Steps' property by drawing visitors away towards improvements that do not
9 abut the property and increasing competition in other areas of the city. *See Kuskys*, 85 Wn.
10 App. 493 (testimony of owners' expert that LID actually diminished value of property was
11 sufficient to rebut presumption that assessment was proper). The ground floor retail tenants
12 will be harmed by the LID improvements because the Overlook Walk and Union Street
13 connection improvements will likely direct foot traffic away from the Harbor Steps and
14 towards Pike Place Market. Less demand for Harbor Steps' retail businesses will result in
15 lower rents and less revenue. Mr. Macaulay did not account for any of these impacts. Harbor
16 Steps already has a high-quality connectivity to the waterfront and no data was presented to
17 justify a value lift based on additional connection points several blocks away. On cross-
18 examination, Mr. Macaulay could not point to any specific data in the ABS Special Benefit
19 Study justifying the precise special benefit to Harbor Steps, claiming only that the market
20 would generally support additional connection points to the waterfront amenities. *See*
21 6/23/2020 Hrg. Tr. at 48-50.
22

23 74. Moreover, the assessment formula is an attempt to distribute costs that do not
24 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
25 "merely a mathematical model that distributes costs").
26

27 75. The Special Benefit Study fails to address whether the \$346,000,000
28 estimated LID project cost takes into account the investment that would have occurred in the
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
2 invested. This is a critical component of estimating which properties receive a direct benefit
3 from the improvements, versus more incidental benefits further from the park.
4

5
6 76. Mr. Macaulay also included personal property in his valuation of hotels even
7 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
8 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
9 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
10 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
11 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
12 receiving a disproportionately high LID assessment in comparison to other property types,
13 since hotels were the only property type subject to personal property LID assessments.
14
15 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
16 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
17 notice procedures because hotel property owners only received notice that their real estate
18 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
19
20

21 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
22 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
23 a television at the waterfront Marriott is assigned a greater special benefit than the same
24 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
25 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
26 unreasonable to assign a value lift to personal property that is replaceable at the same cost
27 and may be obsolete before the LID improvements are even completed. Further, personal
28 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
2
3 be redone to correct for this error.

4
5 78. The proposed final assessment substantially exceeds the special benefit to the
6
7 property and is grossly disproportionate to similarly situated properties within the LID. For
8
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).

12 **State Environmental Policy Act and Other Environmental Permitting**

13
14
15 79. While this appeal is not challenging the City's environmental review and
16
17 permitting processes, those processes are relevant in determining the legality of the
18
19 assessments, and to assessing the delivery risk, the present value of the City's plans, and
20
21 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
22
23 pursue projects that have not yet undergone environmental review (thus limiting the choice
24
25 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
26
27 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
28
29 is just beginning. Further, the City has segmented environmental review, and still has a
30
31 gauntlet of federal, state and tribal review processes to complete before it will be clear what
32
33 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
34
35 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
36
37 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
38
39 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
40
41 committing to reconstruction of Pier 58 and major street improvements without
42
43 environmental review, or the City's Final Special Study has improperly included and is
44
45 proposing to assess the Taxpayer the costs and special benefits of improvements that may
46
47 not get built. Either way, it is faulty process.

Due Process Rights

80. The City's failed to notify Harbor Steps sufficiently in advance of the hearing to allow Harbor Steps to obtain evidence and prepare to properly challenge the assessments. Because LID assessments involve a deprivation of property, affected owners have the right to a hearing as to whether the improvement resulted (or will result) in special benefits to their properties and whether their assessments are proportionate, which necessarily includes the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d 555, 569–70, 229 P.3d 761 (2010).

81. The LID statute specifies that cities must mail notices giving the time and place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at 956. The key inquiry is whether the owner had sufficient time to gather evidence (and secure their own appraisal), evaluate proportionality of the proposed assessments, and whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient for anybody to get an appraisal”).

82. The City’s Notice of Assessment was sent on December 30, 2019. And the Final Special Benefit Study has only been available for public review since January 7, 2020. Due to this short time frame, Harbor Steps requested a prehearing conference and scheduling order that would preserve and protect Harbor Steps’ right to analyze and respond to the Final Study, obtain expert appraisal testimony, conduct depositions, and to accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner

1 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
2
3 the Examiner's Recommendation: I.B.
4

5 **VII. Relief Requested**
6

7 Harbor Steps respectfully requests that the City Council:
8

- 9 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection
10 and:
11
12 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
13 final assessment dated December 20, 2019; or
14
15 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
16 proposed final assessment to \$0 (zero), or such amount as Taxpayer
17 establishes at the hearing in this matter; or
18
19 c. Remand the matter to the Hearing Examiner or City appraiser to
20 recalculate and reduce Taxpayer's assessment using recognized
21 appraisal techniques consistent with USPAP and:
22
23 i. Excluding any property value increase attributable to viaduct
24 removal and other planned WSDOT Improvements;
25
26 ii. Taking into account the effects of COVID-19 pandemic on the
27 value of Taxpayers property and other relevant developments
28 since October 2019;
29
30 iii. Accounting for and excluding (1) any special benefits from
31 existing or planning improvements that already provide
32 similar benefits to Taxpayers property, and (2) any special
33 detriments from construction and other anticipated LID-
34 related disamenities;
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 iv. Accounting for and including only those actual benefits
2 anticipated to accrue to Taxpayer's property based on its
3 location relative to Pier 58, Overlook Walk, and the
4 Promenade, and specific elements of the LID Improvements;
5
6 v. Discounting anticipated special benefits to present value,
7 based on reliable estimates regarding when special benefits
8 will start accruing following completion of the LID
9 Improvements; and
10
11 vi. Accounting for such other issues specific to Taxpayer's

Hearing Examiner File No. CWF-0440

NOTICE OF APPEAL OF HEARING
EXAMINER’S FINDINGS AND
RECOMMENDATION ON EQR-HARBOR
STEPS LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
7666202465

32
33 Eqr-Harbor Steps LLC (“Harbor Steps”) files this appeal pursuant to RCW
34 35.44.070, Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice
35 of the Seattle Office of the City Clerk dated December 30, 2019, and the Hearing
36
37 Examiner’s Findings and Recommendation issued September 8, 2020 (“Examiner’s
38
39 Recommendation”).
40
41
42

43 **I. Taxpayer / Appellant**

25 Facsimile: 206.359.9000
26
27

28 **III. Statement of Taxpayer's Interest**
29

30 Harbor Steps owns the property that is subject to the proposed final assessment
31 described in Section IV. The property at issue is a multifamily residential apartment building
32 with ground floor retail. Additionally, there is a pedestrian corridor connecting the
33 downtown retail core to the waterfront amenities.
34
35

36 The basis of the proposed assessment is a Final Special Benefit/Proportionate
37 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
38 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
39 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
40 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
41
42
43
44
45
46
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which was
22
23 based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Harbor Steps appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 7666202465
34 Site Address: 1212 Western Ave., Seattle, Washington
35 Proposed Final LID Assessment for Parcel: \$1,289,878.02

36
37 See Examiner’s Recommendation at 61-62, 107. To avoid repetition, Taxpayer incorporates
38
39 the evidence and arguments raised before the Hearing Examiner into this appeal. In
40
41 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
42
43 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 107, Sections II.6, II.7, II.13, II.14, II.15, II.18, II.19, II.20, II.21, II.22, II.23,
8 II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3,
9 IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.3, IV.C.4, IV.C.5, IV.C.7, IV.C.8, IV.C.9,
11 IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38
39

40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29

30
31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$3,292,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City's appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
5 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS's appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
16 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
17 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
18 the City's appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City's promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT's planned work.
25

26
27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34
35 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
36 or conjectural"
37

38 **ABS Study:** Not only are the improvements not yet "physical or material," but
39 environmental review and permitting for the City's proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City's then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
2 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
3 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
4 Final Study fails to meet basic standards for admissibility and must be remanded.
5
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6 **V. Standard of Review**

7
8 “When considering the assessment roll, the city council sits ‘as a board of
9 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
10 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
11 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
12 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
13
14

15 The proposed assessments are presumed correct, “unless overcome by clear, cogent
16 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
17 than the heightened presumption of correctness on judicial appeal because “applying these
18 elevated standards at the municipal hearing would afford unwarranted deference to a report
19 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
20 presumption is not evidence and its efficacy is lost when the other party adduces credible
21 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
22 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
23 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
24 presented credible evidence showing that the City’s proposed assessment is arbitrary,
25 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
26 to the City to prove the assessments are actual, measurable, special, non-speculative and
27 proportionate. The City failed that burden.
28
29
30
31
32
33
34
35

37
38
39
40
41
42
43
44
45
46
47

1 **VI. Grounds for Appeal**

2 Harbor Steps appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Decl. of Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of
12 Ben Scott ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO Closing
13 Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have explicitly
14 rejected an argument that, because certain protestors 'failed to offer expert testimony at the
15 city council hearing[,] the presumptions [in favor of the assessment] were still operative as
16 to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail Trunk Sewer*, 35
17 Wn. App. at 843); *see also Kuskay v. City of Goldendale*, 85 Wn. App. 493, 933 P.2d 430
18 (1997) (although appraiser did not submit an appraisal, he provided expert opinion showing
19 that improvements actually diminished value of the property). In fact, no independent
20 evidence is required at all if, for example, objectors show that the assessment was grounded
21 on a fundamentally wrong basis due to an error in the City's appraiser's methods—as is the
22 case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of Everett*, 114 Wn. 2d 88,
23 106, 786 P.2d 253 (1990)). As a simple example, a property owner could simply point out
24 that the square footage assumed in the City's appraisal was incorrect.
25

26
27 2. On March 5, 2020, Harbor Steps presented testimony from experts Ben Scott
28 and Brian O'Connor. The Hearing Examiner failed to meaningfully respond either the expert
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 testimony or the expert appraisal reviews. Instead, the Hearing Examiner simply dismissed
2 Harbor Steps' expert evidence as insufficient appraisal evidence. *See* Examiner's
3 Recommendation at IV. C.7–9. This is contrary to law.
4

5
6 3. For these reasons, Taxpayer appeals the following portions of the Examiner's
7 Recommendation: Sections II.13, II.14, II.15, IV.A, IV.B.11(a), IV.C.7, IV.C.8, IV.C.9, and
8 IV.C.11.
9

10
11
12 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**

13
14 4. RCW 35.43.040 provides cities and towns authority for ordering local
15 improvements and for levying and collecting special assessments “on property specially
16 benefited thereby[.]” The cost and expense of the local improvement “shall be assessed upon
17 all the property in accordance with the special benefits conferred thereon.” RCW 35.44.010.
18

19
20 5. No analysis of general benefits. Special assessments have been “held valid
21 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
22 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
23 mains.” *Heavens*, 66 Wn. 2d at 563. “All such assessments have one common element:
24 they are for the construction of local improvements that are appurtenant to specific land and
25 bring a benefit substantially more intense than is yielded to the rest of the municipality.” *Id.*
26

27
28 6. Harbor Steps' property is not specially benefited by the LID Improvements.
29 The primary purpose and effect of the LID Improvements are to benefit “members of the
30 whole community” and the public at large. *See, e.g., id.* at 565 (“it is plain that a public
31 library is for the benefit of the members of the whole community individually and
32 collectively who may be served by it”). Mr. Macaulay's own chapter of the LID Manual
33 states clearly that appraisers should “[c]onsider general benefits as well as special benefits”
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 (Hrg. Exhibit 117 (LID Manual) at 58²) and he admits that “general benefits probably accrue
2 to the LID area” as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer’s expert confirmed
3 that if an appraiser “identifies both general and special benefits, these benefits should be
4 clearly distinguished and explained, and only special benefits should be included in the
5 After assessment.” Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also*
6 3/3/2020 (A. Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O’Connor) Hrg. Tr. at 158:13-
7 159:8, 192:8-193:2. It is undisputed that Mr. Macaulay did not analyze or measure general
8 benefits, including those arising from construction necessary to meet basic design standards.
9 *See* Hrg. Exhibit 117 (LID Manual) at 58 (“[c]onsideration may also be given to those
10 construction costs related to meeting design standards which may be general benefits as
11 distinct from construction costs emanating from requirements of the LID project”). To the
12 extent Taxpayer’s property may benefit from the LID improvements, the benefit is general
13 and incidental, and failure to consider general benefits was a fatal flaw in the City’s
14 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner’s
15 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

² “Hrg. Exhibits” refer to exhibits that were submitted on behalf of multiple objectors represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two days of cross-examination of the City’s witnesses (June 23, 25 and 26, 2020). For ease of reference, Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
2 intersection for new water main for hydrant held invalid because land was already afforded
3 functional hydrant at nearby street). Here, Taxpayer testified that the LID Improvements are
4 not necessary to the business of their income-producing properties, all of which already have
5 sufficient access to the waterfront, downtown restaurants, and other amenities necessary for
6 their tenants and clients. And for residential properties, like Harbor Steps, the assumption
7 that an increase in tourism will cause lifts in property value is both anecdotally and
8 empirically unsupported. Additionally, the construction of new access points is in fact a
9 negative point for the Harbor Steps, which are located at an existing connection between the
10 downtown core and the waterfront. The LID improvements will draw foot traffic away from
11 the Harbor Steps, increasing competition in other areas of the city. The fact that there is no
12 case law differentiating between binary improvements and parks does not change the law
13 prohibiting assessments on properties already adequately served by existing amenities. *See*
14 Examiner's Recommendation at IV.C.3 (reasoning that "no case law is provided to support
15 the differentiation between a hardscape benefit and the more ephemeral benefits of park").
16 Nor does the Examiner's reasoning excuse the City's failure to account for existing
17 amenities as part of the special benefit calculation. As Dr. Crompton testified, existing view
18 amenities may in fact diminish the incremental effect of new park improvements on the
19 value of properties, much like turning on a weak light in an already brightly illuminated
20 room. *See* Hrg. Exhibit 94 (Crompton's Report) at 12-13.

33
34
35
36
37
38
39
40
41 8. To the extent benefits can be considered "special" as opposed to general, they
42 are nominal or nonexistent for many properties even in the Central Waterfront, which
43 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
44 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
45
46
47

1 change due to expansion of sewer service *near* owners' parcel which were already
2 connected). Here, the primary reasons a user chooses a particular apartment is not proximity
3 to the waterfront. Instead, the reason residents choose to live in the Harbor Steps apartments
4 is proximity to their places of employment and other amenities downtown. See 3/5/2020 (E.
5 Leigh0 Hrg. Tr at 113:13-114:20; 124:3-126:9. For example, without any supporting written
6 analysis, Mr. Macaulay offhandedly concludes that the Harbor Steps apartments would
7 benefit from increased connectivity from being four to five blocks from the Overlook Walk
8 even though the properties currently have direct access to the waterfront via the Harbor
9 Steps. 6/23/2020 Hrg. Tr. At 48:1-50:25; see also B. Scott Decl., ¶ 7. Mr. Leigh testified that
10 he did not anticipate a benefit, and that the Harbor Steps retail component would suffer if a
11 measurable portion of waterfront-bound pedestrian traffic moved north to the market. See
12 also B. Scott Decl., ¶ 6 (describing failure to analyze how existing retail is harmed by foot
13 traffic being pulled away towards new amenities). Even if the City could assess for a view
14 change (and it has promised not to assess for viaduct removal), the fair market value of
15 Harbor Steps' property has not changed because the LID Improvements have not improved
16 the property's waterfront view or access to the waterfront, nor will they when the City
17 anticipates completion in 2024. For these reasons, Taxpayer appeals the following portions
18 of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.

26
27
28
29
30
31
32
33
34
35
36
37 9. No analysis of special detriments. The Final Study fails to properly account
38 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
39 owners for removal and cleanup of underground storage tanks discovered during the
40 improvement project). The Property owner representative for Harbor Steps, Ed Leigh,
41 testified that property values may in fact be negatively impacted by the LID Improvements
42 due to loss of parking, increased traffic and noise, and increased potential for crime,
43
44
45
46
47

1 homelessness and sanitation issues. Mr. Leigh testified that the assessment is an immediate
2 expense for Harbor Steps that comes with no immediate increase in revenue, thereby
3 decreasing property values. See 3/5/2020 (E. Leigh) Hrg. Tr. at 126:10-129:9; 227:8-229:10.
4
5 And Harbor Steps does not expect near term the increases assumed in ABS Valuations'
6
7 spreadsheets or the Final Study. Although Mr. Macaulay claims he analyzed impacts on the
8
9 City's planned elimination of 450 parking stalls on a parcel-by-parcel basis, there is no
10
11 explanation of how lost parking might be a detriment, and no property-specific parking
12
13 analysis in any of his materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12.
14
15

16 10. Likewise, there was no analysis of the risks associated with disamenities such
17
18 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
19
20 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
21
22 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
23
24 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
25
26 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
27
28 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
29
30 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
31
32 the maintenance agreement. *Id.* at 13:4-14:2.
33
34

35 11. There was also no consideration of negative impacts from another four-plus
36
37 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
38
39 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
40
41 law allowing him to dismiss these actual, non-speculative impacts. Because future special
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

benefits calculations are inherently speculative, Washington's eminent domain statute specifically allows condemnees to postpone special benefits assessments until improvements are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).

Moreover, the studies that Mr. Macualay relied on demonstrate that construction disamenity is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy Greenway, the Greenway district "significantly" lagged in value). For these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation: Sections II.25, IV.B.8, and IV.B.9.

12. Special benefit estimate is speculative. When calculating a special benefit, "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it becomes pure speculation." *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324 P.2d 1078 (1958)).

13. Assuming without conceding that one day, the City's planned LID Improvements might increase the value of neighboring properties to some extent, that potential benefit is many years away and speculative. While appraisers tolerate some degree of estimation and judgment, Taxpayer's expert testified that Mr. Macaulay's Final Study is far too speculative to satisfy industry practices and standards.

14. Although LIDs are sometimes finalized prior to completion of improvements, this is typically just six month or a year prior, and the assessments are otherwise supported by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here will not be realized for four or five years. In the meantime, there is permitting risk,

1 construction risk, and general economic risk (e.g., COVID), which renders ABS's 2019
2 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
3 and to what extent, different factors will impact value. *Id.* at 51:13-53:5. Ultimately, Mr.
4 Macaulay concedes that there is inherent uncertainty in valuing the future delivery of
5 projects because "we can't read the future." 6/23/2020 Hrg. Tr. at 79:18-80:8. As he
6 testified: "I just don't know what the market value would be as of the date the project would
7 be finally constructed" because "[t]here could be a lot of elements in the market that did
8 occur between now and then that impact value." 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.*
9 at 211:8-20 (no way to know if his estimates will be higher or lower than comparable sales
10 in 2024 because "markets tend to fluctuate over time" and "I can't predict the future").
11
12
13
14
15
16
17
18
19
20

21 15. The record is clear that while no one can know what "special benefit" might
22 accrue to these properties in four years (if any), we do know that there are no actual benefits
23 now. The LID improvements provide no immediate special benefit to property owners
24 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
25 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
26 sewer system for future users). For example, notwithstanding the questionable hypothesis
27 that apartments will benefit from an expected increase in tenant interest when the
28 improvements are complete, it is undisputed that tenants are not coming in larger numbers
29 and paying higher rental rates now because of something happening five years down the
30 road. See O'Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased
31 today for 18 months would rent at a higher rate due to improvements coming in 2024).
32
33
34
35
36
37
38
39
40
41

42 16. Further, there are no "plans and specifications" on file with the Clerk's Office
43 for the LID Improvements, and it is unlawful to move to final assessments without such
44 "plans and specifications." Ordinance 125760, Section 3; *Local and Road Improvement*
45
46
47

1 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
2
3 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
4
5 dollars on projects still early in the design process. *See* Washington Attorney General
6
7 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
8
9 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
10
11 of programs and included “only so much of the overall costs” that took place within and
12
13 benefitted the assessed properties).

14
15 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
16
17 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
18
19 anticipated to be delivered five years later. Even before COVID, it was speculative to
20
21 assume that market highs experienced in October 2019¹ would be sustained through 2024,
22
23 after an already extraordinarily long expansion period. *See, e.g.,* 3/5/2020 (E. Leigh) Hrg.
24
25 Tr. at 119:15-123:6; 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr.
26
27 Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have
28
29 thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his
30
31 deposition in late February, his “thought process was that the market was going to continue
32
33 to go up,” but now, they are already irrelevant. *Id.*; *see* Gibbons Decl. ISO Closing Stmt. at ¶
34
35 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019
36
37 (*see* Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
38
39 rendered the hypothetical October 2019 Final Study valuations outdated.

40
41 18. As another example of how future events could affect the accuracy and
42
43 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
44
45 Examiner re-open the record to allow the City to explain whether the assessments against
46
47 property owners within the LID are, in fact, being used by the City to fund the emergency

1 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
2 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
3 would be improperly imposing costs on property owners within the LID for improvements
4 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
5 habitat and City infrastructure—this does not provide any special benefit to LID property
6 owners.
7
8
9
10
11

12 19. There is also no certainty the improvements will be delivered on time. Mr.
13 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
14 delay in construction schedule would not constitute a “material change” under the City
15 Council’s ordinance authorizing the improvements. In other words, the City cannot
16 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
17 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
18 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
19 potential delays and project changes inherent in those processes, that call into question the
20 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110

2 Decl., dated 4/15/2020).
3

4
5 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
6 he could not point to a single one where the assessment roll was finalized five years in
7 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
8 he has never recommended final special assessments based on designs less than 30 percent
9 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
10 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
11 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
12 at 66:17-25. He performed no independent due diligence to determine the reliability of the
13 City’s estimates for completion of the LID Improvements, or to ensure that proposed
14 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
15 agreed that if any of his assumptions are incorrect, his opinion of market value would need
16 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
17 68:11-18.

21
22
23
24
25
26
27
28
29

30 21. The City has cited no authority—and Taxpayer is aware of none—that
31 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
32 assess taxes for “actual” special benefits that will not accrue for another five years (if all
33 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
34 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
35 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
36 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
37 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
38 IV.C.14, and IV.C.18.
39
40
41
42
43
44
45
46
47

1 22. Failure to discount special benefit estimates to account for risks and present
2 value. Due to the inherent uncertainty, Taxpayer's expert opine that the Final Study should
3 have accounted for risks associated with delivery of the improvements (including permitting
4 risk, construction risk, general economic risk) and any special damages associated with
5 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
6 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
7 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
8 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) ("Appraisers routinely consider
9 the impact of future conditions [through] discounted cash flow analysis.").

10 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
11 future condition not in place at the date of valuation and can discount for the time value of
12 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
13 until 2024, "[y]ou would be discounting it back to a present value." *Id.* at 77:2-19.
14 Discounting would also have been consistent with his approach for analyzing special
15 benefits to vacant land. He testified that the difference between similarly situated vacant
16 sites slated for development and already developed sites was that the labor, capital and risks
17 associated with development had not yet been borne for those vacant sites. Therefore, the
18 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
19 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
20 fully permitted, has not completed environmental review, and has not reached full design is
21 presently worth significantly less.

22 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
23 present value, an appraiser would consider discount rates for land development to account
24 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at

1 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer to
2 the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
3
4 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
5

6 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
7 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
8 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
9 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
10 ignoring momentarily all of the other methodological and other flaws discussed here and in
11 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
12 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
13 exceeds special benefits when reduced to present value. Further, to the extent the City is
14 arguing that because they are permitted to assess 100% of the special benefit, the special
15 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
16 is again wrong. After applying proper discounting, the City's proposed special benefit
17 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
18 100% of the total estimated special benefit.
19
20

21 26. But even the assumption that the LID improvements would deliver benefits
22 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
23 on. Rather, those studies demonstrate that a discount period of five years is conservative.
24 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
25 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
26 indicates that during the construction period, the Greenway district "significantly" lagged in
27 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
28 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
29

43
44
45
46
47

1 30-31 (discussing New York City High Line and San Francisco Embarcadero
2 improvements). Given the lengthy delay, any prediction of future special benefits is
3 speculative, especially during the construction phase where values are likely to decline. And
4 assuming the LID Improvements take a similarly long period of time after they are complete
5 to start producing tangible property value benefits, each additional year of delay results in
6 further discount to the present value of any future alleged benefit. Gibbons Decl. ISO
7 Closing Stmt., ¶ 19, Ex. A.
8

9
10 27. Applying the same discounting methods described above and in Mr. Gibbons
11 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
12 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
13 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
14 100% assessment should be no more than \$310,106.40. Anything more would permit the
15 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
16 place and providing benefit, and ignore the risks, construction disamenity, and time value of
17 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
18 would counsel that the assessment should be only 39.2% of that assessment cap, or
19 \$121,561.71.
20

21 28. Attachment C includes two Excel spreadsheets applying these discounting
22 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
23 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
24 demonstrates that discounting the City's hypothetical October 2019 special benefits to
25 present value would reduce Taxpayer's assessment to \$442,541 exclusive of any other flaws
26 in the City's proposed assessment. The second spreadsheet shows even more drastic
27 reductions after taking into account (1) Taxpayer's exerts' estimated "Before" valued based
28
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
2
3 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
4
5 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
6
7 the time it takes for the improvements to capture property value.) After such reductions,
8
9 Taxpayer's assessment would be just \$316,107 (for the 5-year discount) or \$86,855 (for the
10
11 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
12
13 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
14
15 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
16
17 Taxpayer's discounting argument without legal or factual analysis; that failure is error.

18 **Appraisal and Assessment Calculation Methods Are Flawed**

19
20
21 29. The "general rule is that each lot, piece, or parcel of land should be assessed
22
23 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
24
25 Wn.2d at 97.

26
27 30. It is proper to sustain a challenge to an assessment, even without the appraisal
28
29 testimony from the owner, where the objector's expert establishes that the assessment was
30
31 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
32
33 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.

34
35 31. The City's appraiser purports to utilize the income method of valuation but
36
37 relied on inaccurate revenue and market data, as discussed further below.

38
39 32. The City's appraiser purports to utilize the comparable sales method of
40
41 valuation, but no City witness attempted "to characterize any one, or all of them, as
42
43 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
44
45 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
46
47 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to

1 characterize any one, or all of them, as comparable to any particular property within the LID”).
2
3 And no City witness could explain how specific adjustments were made to these sales to
4
5 account for value increases due to the hypothesized Before and After Improvements. For this
6
7 reason, Taxpayer appeals Section II.23 of the Examiner’s Recommendation.
8

9 33. Special assessment improperly includes value lift from the Before
10 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
11
12 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
13
14 Improvements, which WSDOT had independently committed to fund. However, Mr.
15
16 Macauley did not calculate the actual market value of LID properties in October 2019 and
17
18 did not separately analyze the hypothetical increase to property values attributable to
19
20 WSDOT’s planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
21
22 current value and then separately calculate a hypothetical “With WSDOT” Before value);
23
24 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
25
26 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
27
28 Petition) at 3-4. Without any documented basis or support, Mr. Macauley simply “ma[de] a
29
30 judgment a call” on what occupancy and rates would have been for the commercial
31
32 properties assuming all of the WSDOT Improvements are completed as of 2019. Macauley
33
34 Depo. at 129:19-130:11. For example, Mr. Macauley surmised that Brian O’Connor’s
35
36 conclusion that the “Before” value for Harbor Steps was overstated by \$88M was perhaps
37
38 due to the fact that Mr. O’Connor was looking at current income numbers and not
39
40 accounting for the value of the “Before” conditions. However, when asked whether the
41
42 value of the of the “Before” conditions is lower or higher than \$88M, Mr. Macauley had no
43
44 clue because he did not do this analysis. 6/23/2020 Hrg. Tr. at 46:9-17:25. This outright
45
46 omission precludes any independent evaluation of the true market “Before” values. *See*
47

1 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet professional appraisal standards; if an
2 appraiser uses current sales data to infer values, then the appraiser must explain how he
3 analyzed that data and other information to come up with the hypothetical value. 3/3/2020
4 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not just removal of the viaduct, but also
5 other road, pedestrian and landscaping improvements WSDOT had already committed to
6 make.
7

8
9
10
11
12 34. However, because Mr. Macaulay testified that he did include some WSDOT-
13 related value-lift in the “Before” values, it follows that part of the special assessment
14 improperly is based on value attributable to the WSDOT Improvements. As shown by
15 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
16 percentage to Before values. So, for example, if Mr. Macaulay believed the WSDOT
17 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
18 special benefit assignment would result in \$300,000 of over-assessment. *See* Gibbons Decl.
19 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
20 to properly exclude the value of Before Improvements from the assessments. For these
21 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
22 Sections II.19, II.29, and IV.B.11(a)(ii)
23

24 35. Special benefits were assigned rather than measured. Mr. Macaulay
25 arbitrarily “assigns” special benefits to Before values instead of measuring them for each
26 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/5/2020 (B.
27 O’Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
28 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
29 commercial properties, Taxpayer’s experts concluded that Mr. Macaulay based adjustments
30 on hypothesized very small increases to property revenue and very small reductions to cap
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 rates to “calculate” an “After” value due to the coming 2024 LID Improvements.

2 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
3
4 “professional judgment” that are neither shown nor replicable.
5

6 36. For these reasons, Taxpayer appeals the following portions of the Examiner’s
7
8 Recommendation: Sections II.19 and IV.B.11(a)(iii).
9

10 37. Special benefit falls within margin of error. The Final Special Benefit Study
11
12 applies an estimated value enhancement of less than 4%, which is generally within the
13
14 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
15
16 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
17
18 Taxpayer’s experts explained that if two appraisers independently arrive at values within 5%
19
20 of one another, this difference is considered reasonable as it falls within the standard margin
21
22 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
23
24 O’Connor) Hrg. Tr. 201:7-204:8. Because Mr. Macaulay’s micro-special benefit percentages
25
26 fall far below that 5% margin, “there is no way of authenticating” such incremental changes
27
28 because “[m]arket forces completely obliterate any tiny little noise factor like that.” *See*
29
30 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed during his deposition
31
32 that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Additionally, the fact that
33
34 “Before” values are also based on a hypothetical that adds some unstated incremental value
35
36 to actual 2019 values exacerbates this issue—the ability for an appraiser to discern the
37
38 micro-value differences between hypothetical conditions that are so similar (the WSDOT
39
40 improvements compared to the LID improvements) “verges on being ludicrous.” 3/3/2020
41
42 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
43

44 38. Even if it were possible to accurately tease out such a miniscule hypothetical
45
46 value change due to improvements coming five years later, experts testified that there is no
47

1 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
2
3 what he felt the changes (hypothetically) would be. *See* 3/3/2020 (A Gibbons) Hrg. Tr. at
4
5 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
6
7 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
8
9 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.

10
11 39. No analysis of value increase attributable to individual components of the
12 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
13
14 percentage difference between hypothetical Before and After conditions. Throughout his
15
16 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
17
18 descriptions in the Addenda even though he testified that he relied on these to calculate
19
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21
22 someone might be able to determine how he attributed value to After conditions described in
23
24 the Addenda, he answered that that was “not the scope of the assignment” because he was
25
26 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
27
28 that the six components were not actually a continuous project, that he was viewing them
29
30 together because the City asked him to, and that if he were to view them independently,
31
32 there was a low probability that properties in the north would specially benefit from
33
34 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

35
36
37 40. Not only did he fail to analyze benefits from each of these non-contiguous
38
39 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.,*
40
41 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
42
43 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
44
45 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
46
47 objectives that guided regulators’ assessment of architectural plans for buildings along a

1 “signature street” were so vague that they amounted to ad hoc review based on the
2 regulators’ subjective impressions and feelings).⁶ It became clear through his testimony that
3 even though he used the renderings as “visual aid[s] in appraising the property in the before
4 and after” to “visually see what the differences would be,” he could not explain what
5 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
6 when shown a rendering of a two-lane road going down to one-lane in the After condition
7 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
8 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
9 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
10 could explain the depiction of the same trees in the After condition nearly twice as tall as in
11 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
12 of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14
15
16
17
18
19
20
21
22
23

24 41. Special assessment is not supported by comparable studies, data or reports.

25 Mr. Macaulay’s references to empirical research do not justify his fundamental assumption
26 that the LID Improvements will lead to meaningfully increased real estate values for
27 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
28 comparable sales or information from the “over twenty-five studies and reports” to arrive at
29 very precise special benefit increases for residential and commercial combined properties,
30 including Taxpayer’s property. For example, although Mr. Macaulay stated that no single
31
32
33
34
35
36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must “be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit.” *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 report or study was directly on point due to the unique nature of the LID Improvements (*see*,
2
3 *e.g.*, 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific
4
5 adjustments in his parcel-by-parcel analysis other than to say that the studies generally
6
7 provided “some background to base decisions on.” *See* 6/23/2020 Hrg. Tr. at 161:5-162:12;
8
9 *see also* 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account
10
11 for similarities and differences between these improvements and the comparable parks he
12
13 looked at).

14
15 42. Mr. Macaulay purports to rely on Dr. Crompton’s research to justify the
16
17 assignment of incremental increase of 0.5% to 4% to property values within the LID.
18
19 However, among other critiques, Dr. Crompton testified that Mr. Macaulay’s reliance on his
20
21 research misinterprets his work in critical ways, including because the LID Improvements
22
23 manifest the characteristics of a parkway (not a park), and his research indicates that most of
24
25 a *park*’s impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
26
27 in Seattle). *See* Hrg. Exhibit 94 (Crompton’s report). Further, updated research shows park-
28
29 related value increases are in fact smaller; that estimated increases are “best guesses” rather
30
31 than predictions of property value increases in a particular city; and that percentages do not
32
33 account for diminishing returns after taking into account water views, which would be the
34
35 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
36
37 topography grants most properties in downtown a water view.

38
39 43. Rather than addressing Dr. Crompton’s critiques, Mr. Macaulay simply states
40
41 that this was just one source of information that was not entirely relevant because, among
42
43 other things, Dr. Crompton’s research dealt with parks and not streetscapes. However, Dr.
44
45 Crompton’s critiques were based on Mr. Macaulay’s own testimony that the core “park”
46
47 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-

1 180:2 (explaining that for purposes of “drawing boundaries around a park” he was
2 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
3
4 Crompton concluded that 500 feet via road from “park” improvements is just one or two
5
6 Seattle blocks and that Mr. Macaulay “inappropriately extend[ed] the LID impact
7
8 significantly beyond that which the park study indicated (even if it was legitimate to use the
9
10 park review’s findings).” Hrg. Exhibit 94 (Crompton’s Report) at 7. Indeed, the LID area
11
12 extends even past 2,000 feet from the core “park” improvements, which is the outer limit of
13
14 impact applicable to “community parks”—which the LID Improvements are not. *Id.*

15
16 44. Further, Mr. Macaulay’s testimony that he analyzed streetscapes, parkways,
17
18 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
19
20 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
21
22 based on the attention given to Dr. Crompton’s work in the Final Study and supporting
23
24 materials, it was clearly an important—if not *the* most important—source of information for
25
26 estimating special benefits (especially with respect to the condos).⁷ No City witness
27
28 adequately explained exactly how Dr. Crompton’s research informed ABS Valuation’s
29
30 parcel-by-parcel analysis.
31

32
33 45. The destination parks discussed in the Final Special Benefit Study do not
34
35 provide reliable, comparable, and valid support for the calculation of special assessments
36
37 here. *See* Gibbons 5/2/2018 Letter at 4. None of the parks cited in the Final Special Benefit
38
39 Study were funded by a LID. And in virtually all of those cases, the park improvements
40

41
42 ⁷ Of the 62 files in Mr. Macaulay’s “2019 Report Info” folder, which he explained contains all of
43 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
44 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
45 Dr. Crompton’s study is the only one that found property value increases up to 2,000 feet from a
46 park (or streetscape) improvement—other studies estimated premiums for real estate only much
47 closer or cited to Dr. Crompton.

1 dramatically restored unimproved or blighted areas, and properties evaluated were within
2
3 two or three blocks of the park.

4
5 46. ABS's claimed reliance on three economic studies to support property value
6 increase is also flawed. The HR&A study does not inform what value increases are
7 expected from the LID Improvements because it projects increases to tourism from *all* of the
8 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
9 dissimilar parks in other cities,⁸ making the methodological application to the LID
10 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
11 conclusion that there would be *no new net visitors* from downtown residents as a result of
12 the LID Improvements and could not explain how this impacted his condo analysis.
13
14 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on "The Impact of Parks on
15 Property Values" primarily focused on whether the benefits accrue to the larger community
16 rather than properties adjacent to the park. And the 2014 New York City Department of
17 Transportation study is not based on real estate transactions and market sales and fails to
18 substantiate any link between increased retail sales and property values. Moreover, this
19 study only looked at impact either directly abutting the streetscape improvement, or a couple
20 hundred feet for plaza-like improvements.
21
22

23
24 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
25 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
26 Exhibit 124. One explanation of that this omission could be TPL's estimate of the economic
27
28
29
30
31
32
33

34
35
36
37
38
39
40
41
42
43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
2 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
3 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
4 asked whether he considered that HR&A’s estimated LID impact is six times greater than
5 TLP’s assessment of Seattle’s entire park system, his surmised that it was because the
6 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
7 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
8 assumptions to account for this difference, which may be partly explained by the fact that
9 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
10 approximately 3.44% of King County tourists visit Seattle primarily because of the city
11 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
12 waterfront improvements.

13
14
15
16
17
18
19
20
21
22
23
24
25 48. Although proximity to the improvements is a key factor in all of these
26 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
27 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
28 not understand that for both the Trust for Public Lands study and Dr. Crompton’s study,
29 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
30 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
31 Improvements is approximate 20 acres and it is not a community park.⁹

32
33
34
35
36
37
38
39 49. There is no explanation in the Final Study or the supporting materials of how
40 the studies or comparable sales were used to derive values for Taxpayer’s property. For
41

42
43
44
45 ⁹ *See*
46 https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf (“Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle’s central waterfront to downtown.”).

1 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
2
3 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.

4
5 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
6
7 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
8
9 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
10
11 recognized) for developing the MAI standards for mass appraisals, testified that the Final
12
13 Study does not meet mass appraisal standards nor allow for independent assessment of the
14
15 accuracy of Mr. Macauley's conclusions.

16
17 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
18
19 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
20
21 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
22
23 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
24
25 testimony suggests that he incorrectly believed that the only difference between direct
26
27 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
28
29 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
30
31 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
32
33 at 205:8-14 (explaining that his mass appraisal simply uses "limited techniques, such as
34
35 Gordon uses in doing his limited restricted report").

36
37 52. But the difference is not only in reporting—mass appraisal techniques must
38
39 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
40
41 Paul Bird (City's witness) testified, the mass appraisal approach is distinct from a parcel-by-
42
43 parcel approach:

44
45 The mass appraisal technique is an appraisal method used to evaluate
46
47 a group of properties that are subject to similar market forces as of a
certain date through the use of market data, statistical analysis and

1 testing. As a result, the mass appraisal technique does not require or
2 involve analysis of each individual property's specific data.
3

4 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
5
6

7 53. Indeed, USPAP's definition for "mass appraisal" is "the process of valuing a
8 universe of properties as a given date using standard methodology, employing common data,
9 and allowing for statistical testing." Appraisal Foundation, Uniform Standards of
10 Professional Appraisal Practice at 5 (2020-2021). And the definition for "mass appraisal
11 model" is "a mathematical expression of how supply and demand factors interact in a
12 market." *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
13 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
14 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
15
16
17
18
19
20
21
22

23 54. Regardless of client direction, Mr. Macaulay is required to comply with
24 USPAP. So, if, as he determined, a "[p]arcel-by-parcel direct appraisal" would not have
25 been economically feasible because it would have taken "an incredible amount of time and
26 cost" (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an
27 appraisal consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8
28 ("performing an individual appraisal of each [condo] parcel would have been cost and time
29 prohibitive").
30
31
32
33
34
35
36

37 55. But Mr. Macaulay's methods fail to comply with USPAP Standards 5 and 6
38 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
39 value, fails to calibrate the model structure to determine the contribution of the individual
40 characteristics affecting value, and does not review the mass appraisal results against actual
41
42
43
44
45
46
47

1 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
2
3 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).

4
5 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
6
7 proximity to the elements, the increase in market rent, market vacancy changes,
8
9 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
10 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
11
12 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
13
14 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
15
16 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
17
18 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
19
20 were hypothetical, it was not possible to identify matched pair sales and no City witness
21
22 explained how ABS Valuation made adjustments to “comparable” sales in order to check
23
24 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
25
26 him to explain his model structure.
27

28
29 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
30
31 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36 relationship between characteristics that affect value, and to calibrate that model to specify how
37 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
38 21). The purpose is to rationally determine what characteristics will create value, and by how much.
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
2
3 and appeals the Examiner’s denial of that motion.
4

5 58. Finally, Taxpayer’s property is not appurtenant—or even in close
6
7 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
8
9 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
10
11 close proximity to the property on which expert testimony was given”). As described above,
12
13 the special assessment is overstated because the Final Study makes no attempt to determine
14
15 general benefits, existing amenities for Taxpayer’s specific property, or special detriments.
16
17 In addition, it is speculative due to the fact that, as of October 2019, improvements were not
18
19 in in place—and, in fact, much of the waterfront is a construction zone following removal of
20
21 the viaduct and now Pier 58 demolition. Under these circumstances, rather than relying on
22
23 entirely imaginary income and shaky hypotheticals, Mr. Macaulay at the very least should
24
25 have discounted the special benefit estimates or waited to perform the Study until the
26
27 improvements were at least close to complete.
28

29 **Erroneous Pre-Improvement Valuation**

30
31 59. The proposed final assessment erroneously overstates the pre-improvement
32
33 value of Taxpayer’s property as of October 1, 2019 and, as a result, overstates the special
34
35 benefit to the Taxpayer’s property.
36

37 60. The City’s Final Study was used to compute the proposed final assessment of
38
39 Harbor Steps’ property. The City’s Study purportedly uses data from the King County
40
41 Department of Assessments,¹¹ but the pre-improvement valuation information in the Final
42
43

44
45 ¹¹ *See, e.g.*, Final Special Benefit Study, “All Other LID Commercial Properties” Spreadsheet
46 (providing a “County Link” to the King County Department of Assessment’s online “eReal
47 Property” search tool).

1 Study does not accurately reflect this data. For example, the City's Study values Harbor
2 Steps' property at \$119,788,000 as of October 1, 2019. However, the King County assessor
3 determined the true and fair value of the property to be \$104,903,000, valued in 2019 for tax
4 year 2020. In other words, the Final Special Benefit Study's valuation is 114.2% of King
5 County's assessed value. The Final Special Benefit Study does not explain this difference—
6 or any differences—between its pre-improvement valuation and its supposed source for
7 market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's
8 Recommendation.
9

10
11
12
13
14
15
16
17 61. Further, the City's analysis was based on unreliable market data. The ABS
18 appraisal overstated the combined total before market value for all four Harbor Steps'
19 parcels by about \$88 million. B. O'Connor's Jan. 31, 2020 Report (attached to Appeal
20 Petition), Ex. 6. Based on our expert appraiser's appraisal review, the true and fair value of
21 the property here as of October 1, 2019 was \$97,788,000. *Id.* (Assuming equal value
22 between all parcels).
23
24
25
26
27

28
29 62. Thus, aside from multiple other reasons why computation of the special
30 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
31 improvement values that do not accurately reflect market data. For these reasons, Taxpayer
32 appeals the following portions of the Examiner's Recommendation: Sections II.13, II.14,
33 and II.15.
34
35
36
37
38

39 **Erroneous Computation of Special Benefit**

40
41 63. "Special benefit" is "the increase in fair market value attributable to the local
42 improvements." *Doolittle*, 114 Wn.2d at 103. "A benefit that a particular piece of property
43 may receive by reason of the improvement is not measured alone by the physical character
44 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
45
46
47

1 of Seattle, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
2 the particular tract or property benefited by the entire improvement, and is it assessed
3 proportionately with the other property included within the assessment district?” *Id.* 165–
4
5 66.
6
7

8
9 64. The proposed final assessment erroneously overstates the special benefit of
10 LID improvements in a number of ways.
11

12
13 65. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
14 the Harbor Steps, Mr. Macaulay assumed room/rental rates would increase by 2.50% (low)
15 and 3.25% (high) due to the 2024 LID Improvements. Mr. Macaulay then uses these same
16 percentages (2.50% and 3.25%) to increase retail and parking. He then uses this
17 hypothesized increased revenue to calculate a new net operating income for the commercial
18 properties and capitalizes that to come up with an “After” valuation.
19
20

21
22 66. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
23 operating income remains the same as in the hypothetical “Before” condition but changes
24 the cap rate. For the Harbor Steps, the cap rate goes from 4.10% to 3.97% (low scenario,
25 creating a bigger value increase) and 4.00% (high scenario, creating a lower value increase).
26
27

28
29 67. Mr. Macaulay then averages his four “After” values to arrive at a final special
30 benefit conclusion. For the Harbor Steps, this is an increase in property value of 2.75% due
31 to the LID Improvements.
32
33

34
35 68. Mr. Macaulay offered little justification for his micro adjustments to revenue
36 and capitalization rates. When asked precisely what the basis is for his special benefit
37 percentage increases to revenue for each commercial property, he could not point to
38 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
39 is nothing in the report to allow a reader to understand how he came up with these
40
41
42
43
44
45
46
47

1 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
2
3 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
4
5 the basis for his belief that certain factors—liked increased connectivity—will increase
6
7 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
8
9 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
10
11 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
12
13 sources equally even though there was no separate analysis done for food and beverage or
14
15 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer’s expert’s
16
17 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
18
19 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer’s
20
21 properties.

22
23 69. Mr. Macaulay testified that he used comparable sales as a reasonableness
24
25 check for commercial properties. But as explained above, no City witness has explained
26
27 how anyone, or all, of the sales are comparable to any particular commercial property within
28
29 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
30
31 in order to make sales “comparable,” he would have had to make adjustments to account for
32
33 Before and After conditions, but there is no way to understand how adjustments were made
34
35 because he “didn’t do a separate sales comparison approach where we showed adjustments
36
37 and whatnot.” 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
38
39 his adjustments were reliable, he said it would have simply been a “test of reasonableness.”
40
41 *Id.* at 127:10-128:24.

42
43 70. It also bears noting that any “internal review” of the special benefit estimates
44
45 would have been largely arbitrary given Mr. Macaulay’s testimony that there is no margin of
46
47 error. Indeed, given all the same information, he seemed to suggest that it would be

1 perfectly reasonable for another experienced appraiser to come up with special benefit
2 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
3 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
4 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
5 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
6 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
7 margin of error (5%) is a "rule of thumb" and not a "hard legal standard," there are still
8 reasonable and unreasonable variations within the appraisal field. *See Examiner's*
9 Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or
10 special because it is arbitrarily assigned; and it is too small to realistically be supported by
11 appraisal techniques.

22 71. No evidence of special benefit. Meanwhile, there is "no actual evidence from
23 any seller or purchaser that the price was higher because of the LID improvements."
24 *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City's appraiser "has not
25 identified any seller or buyer, or any particular property where the existence of the LID
26 improvements had an effect on the market price." *Id.* at 410-11. Meanwhile, Taxpayer has
27 explained that the property has not increased rental rates or revenue due to the forthcoming
28 LID Improvements, because, among other reasons (and apart from COVID), the
29 improvements ABS believes will generate value do not exist and will not for a number of
30 years to come. There are no comparable sales because the LID Improvements are not in
31 place, nor will they be until the end of 2024 if completed on schedule.

42 72. The fair market value of Harbor Steps' property has not changed due to
43 increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially
44 benefited from installation of new water main and fire hydrant where it was already
45
46
47

1 adequately supplied with water and afforded adequate fire protection). And in any event,
2
3 any value attributable to removal of the viaduct was to be excluded from the assessment
4
5 calculation.

6
7 73. There is no special benefit to the Harbor Steps because its apartment demand
8
9 is driven by proximity to downtown job centers. In fact, the LID improvements diminish the
10
11 value of Harbor Steps' property by drawing visitors away towards improvements that do not
12
13 abut the property and increasing competition in other areas of the city. *See Kuskys*, 85 Wn.
14
15 App. 493 (testimony of owners' expert that LID actually diminished value of property was
16
17 sufficient to rebut presumption that assessment was proper). The ground floor retail tenants
18
19 will be harmed by the LID improvements because the Overlook Walk and Union Street
20
21 connection improvements will likely direct foot traffic away from the Harbor Steps and
22
23 towards Pike Place Market. Less demand for Harbor Steps' retail businesses will result in
24
25 lower rents and less revenue. Mr. Macaulay did not account for any of these impacts. Harbor
26
27 Steps already has a high-quality connectivity to the waterfront and no data was presented to
28
29 justify a value lift based on additional connection points several blocks away. On cross-
30
31 examination, Mr. Macaulay could not point to any specific data in the ABS Special Benefit
32
33 Study justifying the precise special benefit to Harbor Steps, claiming only that the market
34
35 would generally support additional connection points to the waterfront amenities. *See*
36
37 6/23/2020 Hrg. Tr. at 48-50.

38
39 74. Moreover, the assessment formula is an attempt to distribute costs that do not
40
41 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
42
43 "merely a mathematical model that distributes costs").

44
45 75. The Special Benefit Study fails to address whether the \$346,000,000
46
47 estimated LID project cost takes into account the investment that would have occurred in the

1 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
2 invested. This is a critical component of estimating which properties receive a direct benefit
3 from the improvements, versus more incidental benefits further from the park.
4

5
6 76. Mr. Macaulay also included personal property in his valuation of hotels even
7 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
8 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
9 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
10 “[a]ppraisal applies to the land and building improvements only” (C-17 at 197). *See also*
11 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
12 receiving a disproportionately high LID assessment in comparison to other property types,
13 since hotels were the only property type subject to personal property LID assessments.
14
15 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO
16 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
17 notice procedures because hotel property owners only received notice that their real estate
18 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
19
20

21 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
22 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
23 a television at the waterfront Marriott is assigned a greater special benefit than the same
24 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
25 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
26 unreasonable to assign a value lift to personal property that is replaceable at the same cost
27 and may be obsolete before the LID improvements are even completed. Further, personal
28 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
2
3 be redone to correct for this error.

4
5 78. The proposed final assessment substantially exceeds the special benefit to the
6
7 property and is grossly disproportionate to similarly situated properties within the LID. For
8
9 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
10
11 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).

12 **State Environmental Policy Act and Other Environmental Permitting**

13
14
15 79. While this appeal is not challenging the City's environmental review and
16
17 permitting processes, those processes are relevant in determining the legality of the
18
19 assessments, and to assessing the delivery risk, the present value of the City's plans, and
20
21 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
22
23 pursue projects that have not yet undergone environmental review (thus limiting the choice
24
25 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
26
27 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
28
29 is just beginning. Further, the City has segmented environmental review, and still has a
30
31 gauntlet of federal, state and tribal review processes to complete before it will be clear what
32
33 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
34
35 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
36
37 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
38
39 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
40
41 committing to reconstruction of Pier 58 and major street improvements without
42
43 environmental review, or the City's Final Special Study has improperly included and is
44
45 proposing to assess the Taxpayer the costs and special benefits of improvements that may
46
47 not get built. Either way, it is faulty process.

Due Process Rights

1
2
3 80. The City's failed to notify Harbor Steps sufficiently in advance of the hearing
4 to allow Harbor Steps to obtain evidence and prepare to properly challenge the assessments.
5 Because LID assessments involve a deprivation of property, affected owners have the right
6 to a hearing as to whether the improvement resulted (or will result) in special benefits to
7 their properties and whether their assessments are proportionate, which necessarily includes
8 the right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
9 555, 569–70, 229 P.3d 761 (2010).
10
11
12
13
14
15

16 81. The LID statute specifies that cities must mail notices giving the time and
17 place of the hearing to the affected owners “[a]t least fifteen days before” the hearing and
18 publish the notice once a week for 2 consecutive weeks in the city’s official newspaper, with
19 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
20 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
21 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
22 secure their own appraisal), evaluate proportionality of the proposed assessments, and
23 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
24 for anybody to get an appraisal”).
25
26
27
28
29
30
31
32
33

34 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
35 Final Special Benefit Study has only been available for public review since January 7, 2020.
36 Due to this short time frame, Harbor Steps requested a prehearing conference and
37 scheduling order that would preserve and protect Harbor Steps’ right to analyze and respond
38 to the Final Study, obtain expert appraisal testimony, conduct depositions, and to
39 accommodate preliminary motions (*e.g.*, with respect to the interplay between SEPA and the
40 City’s assessment of taxes for Pier 58 and Pike/Pine improvements). The Hearing Examiner
41
42
43
44
45
46
47

1 erroneously denied that request. For this reason, Taxpayer appeals the following portions of
2
3 the Examiner's Recommendation: I.B.
4

5 **VII. Relief Requested**
6

7 Harbor Steps respectfully requests that the City Council:
8

- 9 1. Reject the Hearing Examiner's recommended denial of Taxpayer's objection
10 and:
11
12 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
13 final assessment dated December 20, 2019; or
14
15 b. Revise Taxpayer's Waterfront Local Improvement District No. 6751
16 proposed final assessment to \$0 (zero), or such amount as Taxpayer
17 establishes at the hearing in this matter; or
18
19 c. Remand the matter to the Hearing Examiner or City appraiser to
20 recalculate and reduce Taxpayer's assessment using recognized
21 appraisal techniques consistent with USPAP and:
22
23 i. Excluding any property value increase attributable to viaduct
24 removal and other planned WSDOT Improvements;
25
26 ii. Taking into account the effects of COVID-19 pandemic on the
27 value of Taxpayers property and other relevant developments
28 since October 2019;
29
30 iii. Accounting for and excluding (1) any special benefits from
31 existing or planning improvements that already provide
32 similar benefits to Taxpayers property, and (2) any special
33 detriments from construction and other anticipated LID-
34 related disamenities;
35
36
37
38
39
40
41
42
43
44
45
46
47

- 1 iv. Accounting for and including only those actual benefits
2 anticipated to accrue to Taxpayer's property based on its
3 location relative to Pier 58, Overlook Walk, and the
4 Promenade, and specific elements of the LID Improvements;
5
6 v. Discounting anticipated special benefits to present value,
7 based on reliable estimates regarding when special benefits
8 will start accruing following completion of the LID
9 Improvements; and
10
11 vi. Accounting for such other issues specific to Taxpayer's
12 property relevant to calculation of such assessment; and
13
14
15
16
17
18
19
20

21 2. Grant such further relief as the City Council deems just and proper.

NOTICE OF AMENDED APPEAL OF
HEARING EXAMINER’S FINDINGS AND
RECOMMENDATION ON EQR-HARBOR
STEPS LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
7666202465

32
33 EQR-HARBOR STEPS LLC (“Taxpayer”) files this amended appeal pursuant to
34 RCW 35.44.070, Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, City
35 of Seattle Resolution 31979, the notice of the Seattle Office of the City Clerk dated
36 December 30, 2019, the notice of the Seattle Office of the City Clerk dated February 1,
37 2021, the Hearing Examiner’s Findings and Recommendation issued September 8, 2020
38 (“Examiner’s Recommendation”) and the Hearing Examiner’s Findings and
39 Recommendation issued February 1, 2021.

23 **III. Statement of Eqr-Harbor Steps LLC's Interest and Incorporation of Prior**
24 **Arguments**

25
26 EQR-HARBOR STEPS LLC owns the property that is subject to the proposed final
27
28 assessment described in Section IV.
29

30 Eqr-Harbor Steps LLC is amending its appeal as authorized in City of Seattle
31
32 Resolution 31979 to include additional arguments relevant to the revised Final
33
34 Recommendations of the Hearing Examiner issued on February 1, 2021. On February 4,
35
36 2020, Eqr-Harbor Steps LLC timely filed an objection to the assessment, which was based
37
38 on the Final Study. Eqr-Harbor Steps LLC further timely filed an appeal of the Hearing
39
40 Examiner's 2020 recommendations to the City Council. Eqr-Harbor Steps LLC maintains
41
42 and incorporates all objections and arguments raised in its appeal filed with the City Clerk
43
44 on September 22, 2020. This amendment is a supplement is to be read together with Eqr-
45
46 Harbor Steps LLC's appeal filed on September 22, 2020. Eqr-Harbor Steps LLC
47

1 incorporates by reference all filings, evidence, and pleadings filed by any party before the
2 Hearing Examiner as authorized by the Hearing Examiner, including without limitation all
3 records pertaining to the November 2020 through February 2021 remand hearing ordered by
4 Council.
5
6
7
8

9 **IV. Amended Arguments on Appeal**

10 EQR-HARBOR STEPS LLC supplements its appeal of the Hearing Examiner's
11 recommendation to deny Eqr-Harbor Steps LLC's objection to the City of Seattle's
12 Waterfront Local Improvement District No. 6751 proposed final assessment dated
13 December 30, 2019 against the following property:
14
15
16
17

18 King County Parcel No. 7666202465
19 Site Address: 1212 Western Ave., Seattle, Washington
20 Proposed Final LID Assessment for Parcel: \$1,289,878.02
21
22

23 To avoid repetition, Eqr-Harbor Steps LLC incorporates the evidence and arguments
24 raised before the Hearing Examiner and before the City in its September 22, 2020 appeal,
25 into this amended appeal.
26
27
28

29 **A. The Anticipated Special Benefits to Eqr-Harbor Steps LLC's Property**
30 **should be Discounted to Present Value and Assessments Adjusted as**
31 **Appropriate**
32

33 On remand, the City's appraiser acknowledged that special benefits to parcels can be
34 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
35 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
36 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
37 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
38 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
39 accepted that recommendation. The City's appraiser further acknowledged that benefit
40 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined
41
42
43
44
45
46
47

1 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
2 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
3 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
4 calculations to present value because the general benefits are not anticipated from the LID
5 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
6 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
7 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
8 benefit calculation, and related assessments, to account for the delay between the assessment
9 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
10 standard appraisal practice, and renders the other proposed Waterfront LID special
11 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
12 “fundamentally wrong methods.”
13
14
15
16
17
18
19
20
21
22
23

24 All special benefit taxes assessed by a municipality must be based on “actual,
25 physical and material [special benefits that are] not merely speculative or conjectural.”
26 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
27 Additionally, the assessments may not materially exceed the actual special benefit conferred
28 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
29 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
30 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
31 discount benefits the City estimated would accrue to the properties from improvements to be
32 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
33 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
34 property while treating all or most others (including Taxpayer’s) differently, and
35 withholding any discount. This inconsistent treatment is both arbitrary and capricious and
36
37
38
39
40
41
42
43
44
45
46
47

1 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
2 for some properties because the benefit are too distant, while assessing other properties as
3 though distant benefits have already been secured. As Taxpayer identified in its September
4 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
7 reject the improper calculation of the benefit or remand and require the appraiser to discount
8 the benefits to net present value.
9

10
11
12
13
14
15
16
17 **B. The City's Appraiser's Disregard of Data on Remand is Another**
18 **Example of How His Analysis is Unreliable, Not Admissible under Frye**
19 **or ER 702, and His Proposed Special Assessments are not based on**
20 **Actual, Measurable and Special Value Increases from the anticipated**
21 **LID Improvements.**
22

23 The City's appraiser was provided actual performance data for the remanded hotels,
24 including their average daily room rates, from which he had been instructed to "recalculate"
25 hotel "before" values on remand. *See* Hearing Examiner Initial Recommendation at p. 117
26 (Sept. 8, 2020). The appraiser refused, explaining that, had he done so, his before values
27 would be "too low." His remand analysis demonstrates that his whole "income approach to
28 valuation", used for both hotels and other commercial properties, like Taxpayer's, is
29 contrived speculation on speculation. The City's appraiser disregarded these hotels' actual
30 net income in a supposed "income analysis." *See e.g.*, Deposition of Robert J. Macaulay,
31 7:10-13 (December 22, 2020) (Attached as Exhibit A to Objector's Statement on Remand
32 for Case Nos. CWF-0318, 0413, 0415, 0417, 0418, 0423, 0429, 0436).
33
34
35
36
37
38
39
40
41

42 Taxpayer's appraiser submitted an appraisal which was similarly realistic and
43 specific to the property but was disregarded. Taxpayer's appraiser demonstrated the actual
44 value of the property is \$97,788,000, and the LID assessment should be reduced to reflect
45
46
47

1 this before-value. *See* CWF-0440 Statement of Objections, Exh. 6, Appraisal of Brian
2
3 O'Connor (Jan. 31, 2020).

4
5 **C. In Light of Covid's Continuing Impact on Eqr-Harbor Steps LLC and**
6 **other Downtown Property Owners and other Material Changes Since**
7 **October 2019, the LID Should be Cancelled, or at Least Assessments**
8 **Recalculated, to take Into Account Property Value Reductions**
9

10 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
11 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
12 other relevant developments since October 2019." When Washington's first COVID
13 restrictions were imposed in March and April 2020, there was an assumption that they
14 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
15 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
16 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
17 gotten much worse. The City has already imposed higher minimum wages and taxes on
18 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
19 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
20 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
21 years from completion, as a best case. In current circumstances, a downtown tax to fund
22 new, non-essential park improvements against financially strapped taxpayers, and likely
23 passed through to financially strapped tenants and customers would be unfair to taxpayers
24 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
25 rethinks its budget priorities for the next few years, and its potentially funding sources,
26 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
27 property owners) have a chance to recover, and that any assessment take into account the
28 changed circumstances since this appeal process started on February 4, 2020 to avoid
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

unnecessarily and perhaps permanently killing downtown properties and businesses in the name of bettering them.

V. Relief Requested

Particularly in light of the Committee's decision not to take further comment, Eqr-Harbor Steps LLC respectfully request that each Committee member carefully review the record transmitted to Council before voting on our appeal.

EQR-HARBOR STEPS LLC respectfully reiterates its request from the September 22, 2020 appeal that the City Council:

1. Cancel the Waterfront Local Improvement District No. 6751 proposed final assessment dated December 30, 2019; or
2. Revise Taxpayer's Waterfront Local Improvement District No. 6751 proposed final assessment to \$0 (zero), or such amount as Taxpayer establishes at the hearing in this matter; or
3. Grant the Examiner's recommended remand but with instructions to recalculate and reduce Taxpayer's assessment using recognized appraisal techniques consistent with USPAP and
 - a. Excluding any property value increase attributable to viaduct removal and other planned WSDOT Improvements;
 - b. Taking into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and other relevant developments since October 2019;
 - c. Accounting for and excluding (1) any special benefits from existing or planned improvements that already provide similar benefits to

1 Taxpayer's property, and (2) any special detriments from construction
2 and other anticipated LID-related disamenities;
3

4
5 d. Accounting for and including only those actual benefits anticipated to
6 accrue to Taxpayer's property based on its location relative to Pier 58,
7 Overlook Walk, and the Promenade, and specific elements of the LID
8 Improvements;
9

10
11
12 e. Discounting anticipated special benefits to present value, based on
13 reliable estimates regarding when special benefits will start accruing
14 following completion of the LID Improvements; and
15
16

17
18 f. Accounting for such other issues specific to Taxpayer's property
19 relevant to calculation of such assessment; and
20
21

22
23 4. Grant such further relief as the City Council deems just and proper.

BEFORE THE HEARING EXAMINER
CITY OF SEATTLE

In re Proposed Final Assessment Roll for
Local Improvement District No. 6751
("Waterfront LID")

Case Nos. CWF-0425, 0426, 0427, 0440, AND
0441

DECLARATION OF ED LEIGH

I, Ed Leigh, declare as follows:

1. I have personal knowledge of the facts stated below and am competent to testify regarding the same.
2. I am the Vice President of Investments for Equity Residential. I testified in this appeal as to my position, qualifications and employment history.
3. Eqr-Harbor Steps LLC is owned by Equity Residential. Eqr-Harbor Steps LLC owns a four-tower apartment complex encompassing parcel nos. 1976200070, 1976200075, 1976200076, and 7666202465. These parcels are located at 1306 Western Ave., 1301 1st Ave., 1201 1st Ave., and 1212 Western Ave., Seattle WA, and are the subject

DECLARATION OF ED LEIGH – 1

1 of case nos. CWF-0425, -0426, -0427, -0440. These properties are known as the "Harbor
2 Steps" apartment towers.
3

4 4. Eqr-Second & Pine LLC is also owned by Equity Residential, and owns real
5 property parcel no. 7683890010, which is located at 206 Pine St., Seattle WA, and is the
6 subject of case no. CWF-0441. This property is known as the Helios apartments.
7
8

9 5. Equity Residential appealed the City's proposed final assessment for
10 Waterfront LID No. 6751 for each of the properties described above.
11
12

13 **HARBOR STEPS (CWF-0425, -0426, -0427, -0440)**
14

15 6. The Harbor Steps are multifamily residential apartment buildings with
16 ground floor retail. Additionally, the Harbor Steps are on a pedestrian corridor connecting
17 the downtown retail core to the waterfront amenities.
18
19

20 **HELIOS (CWF-0441)**
21

22 7. Helios is a multifamily residential apartment building located a block east of
23 Pike Place Market, and approximately two blocks from the proposed overlook walk.
24
25

26 **COVID-19 Calculations**
27

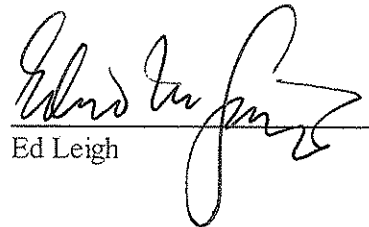

28 8. After we appealed our assessments, the Covid-19 pandemic broke out,
29 causing significant disruptions in Seattle and around the world. Based on our current rents,
30 compared with Brian O'Connor's appraisal calculations to support our appeals, our
31 properties have decreased in value in the range consistent with those described by John
32 Gordon. In Mr. Gordon's April 21, 2020 Declaration, he noted that property values for
33 hotels in Downtown Seattle would be at least 10% to 15% lower when compared with the
34 values as of October 2019 and January 2020. The same is true for our properties. The year-
35 over-year rent reductions that I have observed in our Downtown Seattle assets are consistent
36 with Mr. Gordon's valuation reduction, assuming that rents do not quickly rebound. We
37
38

42
43
44
45
46
47

DECLARATION OF ED LEIGH - 2

1 have not marked-to-market with these assets yet, as this is an end-of-year process for us, but
2
3 the 12.5% average Covid-19 discount is our best generic estimate at this time, based on the
4
5 information available to us.
6

7 I declare under penalty of perjury under the laws of the State of Washington that the
8
9 foregoing is true and correct.
10

11 Signed at Seattle, Washington, on September 21, 2020.

28 **III. Statement of Taxpayer's Interest**

29 Helios owns the property that is subject to the proposed final assessment described in
30
31 Section IV. The property at issue is a multifamily residential apartment building located a
32
33 block east of Pike Place Market, approximately two blocks from the proposed overlook
34
35 walk.
36
37

38 The basis of the proposed assessment is a Final Special Benefit/Proportionate
39
40 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
41
42 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
43
44 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
45
46 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which was
22
23 based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Helios appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 7683890010
34 Site Address: 206 Pine St., Seattle, Washington
35 Proposed Final LID Assessment for Parcel: \$2,244,356.42

36
37 See Examiner’s Recommendation at 61-62, 107. To avoid repetition, Taxpayer incorporates
38
39 the evidence and arguments raised before the Hearing Examiner into this appeal. In
40
41 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
42
43 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 107, Sections II.6, II.7, II.13, II.14, II.15, II.18, II.19, II.20, II.21, II.22, II.23,
8 II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3,
9 IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.3, IV.C.4, IV.C.5, IV.C.7, IV.C.8, IV.C.9,
11 IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38
39

40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29

30
31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$5,728,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City's appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
5 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS's appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
16 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
17 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
18 the City's appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City's promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT's planned work.
25
26

27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
35 or conjectural"
36

37
38 **ABS Study:** Not only are the improvements not yet "physical or material," but
39 environmental review and permitting for the City's proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City's then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
2 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
3 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
4 Final Study fails to meet basic standards for admissibility and must be remanded.
5
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
3 statement below.
4
5

6 **V. Standard of Review**

7 “When considering the assessment roll, the city council sits ‘as a board of
8 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
9 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
10 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
11 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
12
13
14
15
16
17

18 The proposed assessments are presumed correct, “unless overcome by clear, cogent
19 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
20 than the heightened presumption of correctness on judicial appeal because “applying these
21 elevated standards at the municipal hearing would afford unwarranted deference to a report
22 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
23 presumption is not evidence and its efficacy is lost when the other party adduces credible
24 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
25 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
26 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
27 presented credible evidence showing that the City’s proposed assessment is arbitrary,
28 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
29 to the City to prove the assessments are actual, measurable, special, non-speculative and
30 proportionate. The City failed that burden.
31
32
33
34

41
42
43
44
45
46
47

1 **VI. Grounds for Appeal**

2 Helios appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Decl. of Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of
12 Ben Scott ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO Closing
13 Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have explicitly
14 rejected an argument that, because certain protestors 'failed to offer expert testimony at the
15 city council hearing[,] the presumptions [in favor of the assessment] were still operative as
16 to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail Trunk Sewer*, 35
17 Wn. App. at 843); *see also Kuskys v. City of Goldendale*, 85 Wn. App. 493, 933 P.2d 430
18 (1997) (although appraiser did not submit an appraisal, he provided expert opinion showing
19 that improvements actually diminished value of the property). In fact, no independent
20 evidence is required at all if, for example, objectors show that the assessment was grounded
21 on a fundamentally wrong basis due to an error in the City's appraiser's methods—as is the
22 case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of Everett*, 114 Wn. 2d 88,
23 106, 786 P.2d 253 (1990)). As a simple example, a property owner could simply point out
24 that the square footage assumed in the City's appraisal was incorrect.
25

26
27 2. On March 5 and 11, 2020, Helios presented testimony from experts Ben Scott
28 and Brian O'Connor. The Hearing Examiner failed to meaningfully respond either the expert
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 testimony or the expert appraisal reviews, including testimony by Mr. Scott showing that
2 Mr. Macaulay incorrectly reduced the number of studios at the Helios by 56 and increased
3 the number of larger, higher rent units in his income calculation, which erroneously
4 increased the property value and LID assessment. *See* 3/11/2020 Hrg. Tr. at 22:21-4:17.
5
6 Instead, the Hearing Examiner simply dismissed Helios' expert evidence as insufficient
7 appraisal evidence. *See* Examiner's Recommendation at IV. C.7-9. This is contrary to law.
8
9

10
11 3. For these reasons, Taxpayer appeals the following portions of the Examiner's
12 Recommendation: Sections II.13, II.14, II.15, IV.A, IV.B.11(a), IV.C.7, IV.C.8, IV.C.9, and
13 IV.C.11.
14
15
16
17

18
19 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**
20

21 4. RCW 35.43.040 provides cities and towns authority for ordering local
22 improvements and for levying and collecting special assessments "on property specially
23 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed upon
24 all the property in accordance with the special benefits conferred thereon." RCW 35.44.010.
25
26
27

28 5. No analysis of general benefits. Special assessments have been "held valid
29 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
30 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
31 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
32 they are for the construction of local improvements that are appurtenant to specific land and
33 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
34
35
36
37
38
39

40 6. Helios' property is not specially benefited by the LID Improvements. The
41 primary purpose and effect of the LID Improvements are to benefit "members of the whole
42 community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public library is
43 for the benefit of the members of the whole community individually and collectively who
44
45
46
47

1 may be served by it"). Mr. Macaulay's own chapter of the LID Manual states clearly that
2 appraisers should "[c]onsider general benefits as well as special benefits" (Hrg. Exhibit 117
3 (LID Manual) at 58²) and he admits that "general benefits probably accrue to the LID area"
4 as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer's expert confirmed that if an
5 appraiser "identifies both general and special benefits, these benefits should be clearly
6 distinguished and explained, and only special benefits should be included in the After
7 assessment." Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also* 3/3/2020 (A.
8 Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O'Connor) Hrg. Tr. at 158:13-159:8, 192:8-
9 193:2. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
10 including those arising from construction necessary to meet basic design standards. *See*
11 Hrg. Exhibit 117 (LID Manual) at 58 ("[c]onsideration may also be given to those
12 construction costs related to meeting design standards which may be general benefits as
13 distinct from construction costs emanating from requirements of the LID project"). To the
14 extent Taxpayer's property may benefit from the LID improvements, the benefit is general
15 and incidental, and failure to consider general benefits was a fatal flaw in the City's
16 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner's
17 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35 7. LID Improvements not necessary. Unlike typical LID projects, the
36 Waterfront LID improvements are largely unnecessary to the functionality of any particular
37 property, including Taxpayer's property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d
38
39
40
41

42
43 ² "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors
44 represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil
45 (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two
46 days of cross-examination of the City's witnesses (June 23, 25 and 26, 2020). For ease of reference,
47 Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
2 held invalid where owners would have benefitted equally from increase of only 9 feet);
3
4 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
5
6 intersection for new water main for hydrant held invalid because land was already afforded
7
8 functional hydrant at nearby street). Here, Taxpayer provide evidence that the LID
9
10 Improvements are not necessary to the business of their income-producing properties, all of
11
12 which already have sufficient access to the waterfront, downtown restaurants, and other
13
14 amenities necessary for their clients and users. And for residential properties, the assumption
15
16 that an increase in tourism will cause lifts in property value is both anecdotally and
17
18 empirically unsupported. The fact that there is no case law differentiating between binary
19
20 improvements and parks does not change the law prohibiting assessments on properties
21
22 already adequately served by existing amenities. *See* Examiner's Recommendation at
23
24 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
25
26 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
27
28 reasoning excuse the City's failure to account for existing amenities as part of the special
29
30 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
31
32 the incremental effect of new park improvements on the value of properties, much like
33
34 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
35
36 (Crompton's Report) at 12-13.

37
38
39 8. To the extent benefits can be considered "special" as opposed to general, they
40
41 are nominal or nonexistent for many properties even in the Central Waterfront, which
42
43 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
44
45 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
46
47 change due to expansion of sewer service *near* owners' parcel which were already

1 connected). Here, Helios will not specially benefit from the LID Improvements because its
2 apartment demand is driven by proximity to downtown job centers, restaurants, night life,
3 and shopping. *See* 3/5/2020 (E. Leigh) Hrg. Tr. at 220:25-221:6. Even if the City could
4 assess for a view change (and it has promised not to assess for viaduct removal), the fair
5 market value of Helios' property has not changed because the LID Improvements have not
6 improved the property's waterfront view or access to the waterfront, nor will they when the
7 City anticipates completion in 2024. For these reasons, Taxpayer appeals the following
8 portions of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.
9

10
11
12
13
14
15
16
17 9. No analysis of special detriments. The Final Study fails to properly account
18 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
19 owners for removal and cleanup of underground storage tanks discovered during the
20 improvement project). The Property owner representative for Helios, Ed Leigh, testified that
21 property values may in fact be negatively impacted by the LID Improvements due to loss of
22 parking, increased traffic and noise, and increased potential for crime, homelessness and
23 sanitation issues. *See* 3/5/2020 (E. Leigh) Hrg. Tr. at 223:13-225:14; 227:8-229:10. And
24 Helios does not expect near term the increases assumed in ABS Valuations' spreadsheets or
25 the Final Study. Although Mr. Macaulay claims he analyzed impacts on the City's planned
26 elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation of how
27 lost parking might be a detriment, and no property-specific parking analysis in any of his
28 materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12.

39

40
41 10. Likewise, there was no analysis of the risks associated with disamenities such
42 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
43 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
44 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
45
46
47

1 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
2 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
3 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
4 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
5 the maintenance agreement. *Id.* at 13:4-14:2.
6
7
8
9

10
11 11. There was also no consideration of negative impacts from another four-plus
12 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
13 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
14 law allowing him to dismiss these actual, non-speculative impacts. Because future special
15 benefits calculations are inherently speculative, Washington's eminent domain statute
16 specifically allows condemnees to postpone special benefits assessments until improvements
17 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
18 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
19 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
20 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
21 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
22 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
23 II.25, IV.B.8, and IV.B.9.
24
25
26
27
28
29
30
31
32
33
34
35

36 12. Special benefit estimate is speculative. When calculating a special benefit,
37 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
38 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
39
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4
5 13. Assuming without conceding that one day, the City’s planned LID
6 Improvements might increase the value of neighboring properties to some extent, that
7 potential benefit is many years away and speculative. While appraisers tolerate some degree
8 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
9 far too speculative to satisfy industry practices and standards.
10

11
12 14. Although LIDs are sometimes finalized prior to completion of improvements,
13 this is typically just six month or a year prior, and the assessments are otherwise supported
14 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
15 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
16 will not be realized for four or five years. In the meantime, there is permitting risk,
17 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
18 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
19 and to what extent, different factors will impact value. *Id.* at 51:13-53:5. Ultimately, Mr.
20 Macaulay concedes that there is inherent uncertainty in valuing the future delivery of
21 projects because “we can’t read the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he
22 testified: “I just don’t know what the market value would be as of the date the project would
23 be finally constructed” because “[t]here could be a lot of elements in the market that did
24 occur between now and then that impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.*
25 at 211:8-20 (no way to know if his estimates will be higher or lower than comparable sales
26 in 2024 because “markets tend to fluctuate over time” and “I can’t predict the future”).
27
28

29 15. The record is clear that while no one can know what “special benefit” might
30 accrue to these properties in four years (if any), we do know that there are no actual benefits
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 now. The LID improvements provide no immediate special benefit to property owners
2 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
3 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
4 sewer system for future users). For example, notwithstanding the questionable hypothesis
5 that apartments will benefit from an expected increase in tenant interest when the
6 improvements are complete, it is undisputed that tenants are not coming in larger numbers
7 and paying higher rental rates now because of something happening five years down the
8 road. See O'Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased
9 today for 18 months would rent at a higher rate due to improvements coming in 2024).
10

11 16. Further, there are no “plans and specifications” on file with the Clerk’s
12 Office for the LID Improvements, and it is unlawful to move to final assessments without
13 such “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
14 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
15 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
16 dollars on projects still early in the design process. See Washington Attorney General
17 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
18 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
19 of programs and included “only so much of the overall costs” that took place within and
20 benefitted the assessed properties).
21

22 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
23 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
24 anticipated to be delivered five years later. Even before COVID, it was speculative to
25 assume that market highs experienced in October 2019¹ would be sustained through 2024,
26 after an already extraordinarily long expansion period. See, e.g., 3/5/2020 (E. Leigh) Hrg.
27
28
29
30

37
38
39
40
41
42
43
44
45
46
47

1 Tr. at 119:15-123:6; 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr.
2
3 Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have
4
5 thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his
6
7 deposition in late February, his “thought process was that the market was going to continue
8
9 to go up,” but now, they are already irrelevant. Id.; see Gibbons Decl. ISO Closing Stmt. at ¶
10
11 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019
12
13 (see Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
14
15 rendered the hypothetical October 2019 Final Study valuations outdated.

16
17 18. As another example of how future events could affect the accuracy and
18
19 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
20
21 Examiner re-open the record to allow the City to explain whether the assessments against
22
23 property owners within the LID are, in fact, being used by the City to fund the emergency
24
25 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
26
27 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
28
29 would be improperly imposing costs on property owners within the LID for improvements
30
31 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
32

33

47

1 habitat and City infrastructure—this does not provide any special benefit to LID property
2 owners.
3

4
5 19. There is also no certainty the improvements will be delivered on time. Mr.
6 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
7 delay in construction schedule would not constitute a “material change” under the City
8 Council’s ordinance authorizing the improvements. In other words, the City cannot
9 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
10 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
11 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
12 potential delays and project changes inherent in those processes, that call into question the
13 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
14 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
15 Decl., dated 4/15/2020).
16

17
18 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
19 he could not point to a single one where the assessment roll was finalized five years in
20 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
21 he has never recommended final special assessments based on designs less than 30 percent
22 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
23 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
24 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
25 at 66:17-25. He performed no independent due diligence to determine the reliability of the
26 City’s estimates for completion of the LID Improvements, or to ensure that proposed
27 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
28 agreed that if any of his assumptions are incorrect, his opinion of market value would need
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
2
3 68:11-18.

4
5 21. The City has cited no authority—and Taxpayer is aware of none—that
6
7 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
8
9 assess taxes for “actual” special benefits that will not accrue for another five years (if all
10
11 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
12
13 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
14
15 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
16
17 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
18
19 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
20
21 IV.C.14, and IV.C.18.

22
23 22. Failure to discount special benefit estimates to account for risks and present
24
25 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
26
27 have accounted for risks associated with delivery of the improvements (including permitting
28
29 risk, construction risk, general economic risk) and any special damages associated with
30
31 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
32
33 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
34
35 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
36
37 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
38
39 the impact of future conditions [through] discounted cash flow analysis.”).

40
41 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
42
43 future condition not in place at the date of valuation and can discount for the time value of
44
45 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
46
47 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.

1 Discounting would also have been consistent with his approach for analyzing special
2 benefits to vacant land. He testified that the difference between similarly situated vacant
3 sites slated for development and already developed sites was that the labor, capital and risks
4 associated with development had not yet been borne for those vacant sites. Therefore, the
5 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
6 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
7 fully permitted, has not completed environmental review, and has not reached full design is
8 presently worth significantly less.
9

10
11 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
12 present value, an appraiser would consider discount rates for land development to account
13 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
14 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer to
15 the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
16 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
17

18
19 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
20 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
21 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
22 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
23 ignoring momentarily all of the other methodological and other flaws discussed here and in
24 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
25 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
26 exceeds special benefits when reduced to present value. Further, to the extent the City is
27 arguing that because they are permitted to assess 100% of the special benefit, the special
28 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 is again wrong. After applying proper discounting, the City's proposed special benefit
2 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
3 100% of the total estimated special benefit.
4

5
6 26. But even the assumption that the LID improvements would deliver benefits
7 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
8 on. Rather, those studies demonstrate that a discount period of five years is conservative.
9
10 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
11 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
12 indicates that during the construction period, the Greenway district "significantly" lagged in
13 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
14 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
15 30-31 (discussing New York City High Line and San Francisco Embarcadero
16 improvements). Given the lengthy delay, any prediction of future special benefits is
17 speculative, especially during the construction phase where values are likely to decline. And
18 assuming the LID Improvements take a similarly long period of time after they are complete
19 to start producing tangible property value benefits, each additional year of delay results in
20 further discount to the present value of any future alleged benefit. Gibbons Decl. ISO
21 Closing Stmt., ¶ 19, Ex. A.
22
23
24
25
26
27
28
29
30
31
32
33
34
35

36 27. Applying the same discounting methods described above and in Mr. Gibbons
37 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
38 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
39 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
40 100% assessment should be no more than \$539,577.60. Anything more would permit the
41 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
42
43
44
45
46
47

1 place and providing benefit, and ignore the risks, construction disamenity, and time value of
2 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
3 would counsel that the assessment should be only 39.2% of that assessment cap, or
4
5 \$211,514.42.
6
7

8
9 28. Attachment C includes two Excel spreadsheets applying these discounting
10 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
11 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
12 demonstrates that discounting the City's hypothetical October 2019 special benefits to
13 present value would reduce Taxpayer's assessment to \$770,011, exclusive of any other
14 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
15 reductions after taking into account (1) Taxpayer's exerts' estimated "Before" valued based
16 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
17 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
18 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
19 the time it takes for the improvements to capture property value.) After such reductions,
20 Taxpayer's assessment would be just \$540,759 (for the 5-year discount) or \$148,582 (for the
21 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
22 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
23 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
24 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
25
26
27

35
36
37
38
39
40

41 **Appraisal and Assessment Calculation Methods Are Flawed**

42 29. The "general rule is that each lot, piece, or parcel of land should be assessed
43 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
44 Wn.2d at 97.
45
46
47

1 30. It is proper to sustain a challenge to an assessment, even without the appraisal
2 testimony from the owner, where the objector's expert establishes that the assessment was
3 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
4 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
5
6

7
8
9 31. The City's appraiser purports to utilize the income method of valuation but
10 relied on inaccurate revenue and market data, as discussed further below.
11

12
13 32. The City's appraiser purports to utilize the comparable sales method of
14 valuation, but no City witness attempted "to characterize any one, or all of them, as
15 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
16 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
17 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
18 characterize any one, or all of them, as comparable to any particular property within the LID").
19 And no City witness could explain how specific adjustments were made to these sales to
20 account for value increases due to the hypothesized Before and After Improvements. For this
21 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
22
23

24
25 33. Special assessment improperly includes value lift from the Before
26 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
27 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
28 Improvements, which WSDOT had independently committed to fund. However, Mr.
29 Macaulay did not calculate the actual market value of LID properties in October 2019 and
30 did not separately analyze the hypothetical increase to property values attributable to
31 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
32 current value and then separately calculate a hypothetical "With WSDOT" Before value);
33 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
34

47

1 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
2
3 Petition) at 3-4. Without any documented basis or support, Mr. Macaulay simply “ma[de] a
4
5 judgment a call” on what occupancy and rates would have been for the commercial
6
7 properties assuming all of the WSDOT Improvements are completed as of 2019. Macaulay
8
9 Depo. at 129:19-130:11. This outright omission precludes any independent evaluation of the
10
11 true market “Before” values. See 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet
12
13 professional appraisal standards; if an appraiser uses current sales data to infer values, then
14
15 the appraiser must explain how he analyzed that data and other information to come up with
16
17 the hypothetical value. 3/3/2020 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not
18
19 just removal of the viaduct, but also other road, pedestrian and landscaping improvements
20
21 WSDOT had already committed to make.

22
23 34. However, because Mr. Macaulay testified that he did include some WSDOT-
24
25 related value-lift in the “Before” values, it follows that part of the special assessment
26
27 improperly is based on value attributable to the WSDOT Improvements. As shown by
28
29 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
30
31 percentage to Before values. So, for example, if Mr. Macaulay believed the WSDOT
32
33 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
34
35 special benefit assignment would result in \$300,000 of over-assessment. See Gibbons Decl.
36
37 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
38
39 to properly exclude the value of Before Improvements from the assessments. For these
40
41 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
42
43 Sections II.19, II.29, and IV.B.11(a)(ii)

44
45 35. Special benefits were assigned rather than measured. Mr. Macaulay
46
47 arbitrarily “assigns” special benefits to Before values instead of measuring them for each

1 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/5/2020 (B.
2 O'Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
3 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
4 commercial properties, Taxpayer's experts concluded that Mr. Macaulay based adjustments
5 on hypothesized very small increases to property revenue and very small reductions to cap
6 rates to "calculate" an "After" value due to the coming 2024 LID Improvements.
7 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
8 "professional judgment" that are neither shown nor replicable.
9

10
11
12
13
14
15
16
17 36. For these reasons, Taxpayer appeals the following portions of the Examiner's
18 Recommendation: Sections II.19, and IV.B.11(a)(iii).
19

20
21 37. Special benefit falls within margin of error. The Final Special Benefit Study
22 applies an estimated value enhancement of less than 4%, which is generally within the
23 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
24 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
25 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
26 of one another, this difference is considered reasonable as it falls within the standard margin
27 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
28 O'Connor) Hrg. Tr. 201:7-204:8. Because Mr. Macaulay's micro-special benefit percentages
29 fall far below that 5% margin, "there is no way of authenticating" such incremental changes
30 because "[m]arket forces completely obliterate any tiny little noise factor like that." *See*
31 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed during his deposition
32 that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Additionally, the fact that
33 "Before" values are also based on a hypothetical that adds some unstated incremental value
34 to actual 2019 values exacerbates this issue—the ability for an appraiser to discern the
35
36
37
38
39
40
41
42
43
44
45
46
47

1 micro-value differences between hypothetical conditions that are so similar (the WSDOT
2 improvements compared to the LID improvements) “verges on being ludicrous.” 3/3/2020
3 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
4

5
6 38. Even if it were possible to accurately tease out such a miniscule hypothetical
7 value change due to improvements coming five years later, experts testified that there is no
8 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
9 what he felt the changes (hypothetically) would be. *See* 3/3/2020 (A Gibbons) Hrg. Tr. at
10 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
11 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
12 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14

15 39. No analysis of value increase attributable to individual components of the
16 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
17 percentage difference between hypothetical Before and After conditions. Throughout his
18 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
19 descriptions in the Addenda even though he testified that he relied on these to calculate
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21 someone might be able to determine how he attributed value to After conditions described in
22 the Addenda, he answered that that was “not the scope of the assignment” because he was
23 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
24 that the six components were not actually a continuous project, that he was viewing them
25 together because the City asked him to, and that if he were to view them independently,
26 there was a low probability that properties in the north would specially benefit from
27 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

37
38
39
40
41
42
43
44
45
46
47

1 40. Not only did he fail to analyze benefits from each of these non-contiguous
2 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.*,
3 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
4 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
5 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
6 objectives that guided regulators' assessment of architectural plans for buildings along a
7 "signature street" were so vague that they amounted to ad hoc review based on the
8 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
9 even though he used the renderings as "visual aid[s] in appraising the property in the before
10 and after" to "visually see what the differences would be," he could not explain what
11 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
12 when shown a rendering of a two-lane road going down to one-lane in the After condition
13 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
14 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
15 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
16 could explain the depiction of the same trees in the After condition nearly twice as tall as in
17 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
18 of the Examiner's Recommendation: II.27 and IV.B.4.
19
20

31
32
33
34
35
36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 41. Special assessment is not supported by comparable studies, data or reports.
2
3 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
4 that the LID Improvements will lead to meaningfully increased real estate values for
5 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
6
7 comparable sales or information from the "over twenty-five studies and reports" to arrive at
8
9 very precise special benefit increases for residential and commercial combined properties,
10
11 including Taxpayer's property. For example, although Mr. Macaulay stated that no single
12
13 report or study was directly on point due to the unique nature of the LID Improvements (*see*,
14
15 *e.g.*, 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific
16
17 adjustments in his parcel-by-parcel analysis other than to say that the studies generally
18
19 provided "some background to base decisions on." *See* 6/23/2020 Hrg. Tr. at 161:5-162:12;
20
21 *see also* 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account
22
23 for similarities and differences between these improvements and the comparable parks he
24
25 looked at).
26
27

28 42. Mr. Macaulay purports to rely on Dr. Crompton's research to justify the
29
30 assignment of incremental increase of 0.5% to 4% to property values within the LID.
31
32 However, among other critiques, Dr. Crompton testified that Mr. Macaulay's reliance on his
33
34 research misinterprets his work in critical ways, including because the LID Improvements
35
36 manifest the characteristics of a parkway (not a park), and his research indicates that most of
37
38 a *park's* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
39
40 in Seattle). *See* Hrg. Exhibit 94 (Crompton's report). Further, updated research shows park-
41
42 related value increases are in fact smaller; that estimated increases are "best guesses" rather
43
44 than predictions of property value increases in a particular city; and that percentages do not
45
46 account for diminishing returns after taking into account water views, which would be the
47

1 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
2 topography grants most properties in downtown a water view.
3

4
5 43. Rather than addressing Dr. Crompton's critiques, Mr. Macaulay simply states
6 that this was just one source of information that was not entirely relevant because, among
7 other things, Dr. Crompton's research dealt with parks and not streetscapes. However, Dr.
8 Crompton's critiques were based on Mr. Macaulay's own testimony that the core "park"
9 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
10 180:2 (explaining that for purposes of "drawing boundaries around a park" he was
11 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
12 Crompton concluded that 500 feet via road from "park" improvements is just one or two
13 Seattle blocks and that Mr. Macaulay "inappropriately extend[ed] the LID impact
14 significantly beyond that which the park study indicated (even if it was legitimate to use the
15 park review's findings)." Hrg. Exhibit 94 (Crompton's Report) at 7. Indeed, the LID area
16 extends even past 2,000 feet from the core "park" improvements, which is the outer limit of
17 impact applicable to "community parks"—which the LID Improvements are not. *Id.*
18 Taxpayer's property is not within 500 road network feet from the "park" improvements. *See*
19 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Ex. E, F.
20
21

22
23 44. Further, Mr. Macaulay's testimony that he analyzed streetscapes, parkways,
24 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
25 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
26 based on the attention given to Dr. Crompton's work in the Final Study and supporting
27 materials, it was clearly an important—if not *the* most important—source of information for
28
29
30
31

46
47

1 estimating special benefits (especially with respect to the condos).⁷ No City witness
2 adequately explained exactly how Dr. Crompton's research informed ABS Valuation's
3 parcel-by-parcel analysis.
4

5
6 45. The destination parks discussed in the Final Special Benefit Study do not
7 provide reliable, comparable, and valid support for the calculation of special assessments
8 here. *See* Gibbons 5/2/2018 Letter at 4. None of the parks cited in the Final Special Benefit
9 Study were funded by a LID. And in virtually all of those cases, the park improvements
10 dramatically restored unimproved or blighted areas, and properties evaluated were within
11 two or three blocks of the park.
12

13
14 46. ABS's claimed reliance on three economic studies to support property value
15 increase is also flawed. The HR&A study does not inform what value increases are
16 expected from the LID Improvements because it projects increases to tourism from *all* of the
17 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
18 dissimilar parks in other cities,⁸ making the methodological application to the LID
19 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
20 conclusion that there would be *no new net visitors* from downtown residents as a result of
21 the LID Improvements and could not explain how this impacted his condo analysis.
22
23
24
25
26
27
28
29
30
31
32
33
34
35

36
37 ⁷ Of the 62 files in Mr. Macaulay's "2019 Report Info" folder, which he explained contains all of
38 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
39 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
40 Dr. Crompton's study is the only one that found property value increases up to 2,000 feet from a
41 park (or streetscape) improvement—other studies estimated premiums for real estate only much
42 closer or cited to Dr. Crompton.

43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
2 Property Values” primarily focused on whether the benefits accrue to the larger community
3 rather than properties adjacent to the park. And the 2014 New York City Department of
4 Transportation study is not based on real estate transactions and market sales and fails to
5 substantiate any link between increased retail sales and property values. Moreover, this
6 study only looked at impact either directly abutting the streetscape improvement, or a couple
7 hundred feet for plaza-like improvements.
8

9
10 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
11 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
12 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
13 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
14 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
15 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
16 asked whether he considered that HR&A’s estimated LID impact is six times greater than
17 TPL’s assessment of Seattle’s entire park system, his surmised that it was because the
18 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
19 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
20 assumptions to account for this difference, which may be partly explained by the fact that
21 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
22 approximately 3.44% of King County tourists visit Seattle primarily because of the city
23 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
24 waterfront improvements.
25

26
27 48. Although proximity to the improvements is a key factor in all of these
28 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
29
30
31
32
33
34
35
36
37
38
39
40
41

44
45
46
47

1 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
2 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
3
4 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
5
6 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
7
8 Improvements is approximate 20 acres and it is not a community park.⁹
9

10
11 49. There is no explanation in the Final Study or the supporting materials of how
12 the studies or comparable sales were used to derive values for Taxpayer's property. For
13 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
14
15 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
16
17

18
19 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
20 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
21 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
22 recognized) for developing the MAI standards for mass appraisals, testified that the Final
23 Study does not meet mass appraisal standards nor allow for independent assessment of the
24 accuracy of Mr. Macauley's conclusions.
25
26

27
28 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
29 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
30 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
31 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
32 testimony suggests that he incorrectly believed that the only difference between direct
33 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
34
35
36
37
38
39
40
41
42

43
44 ⁹ *See*
45 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
2 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
3 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
4 Gordon uses in doing his limited restricted report”).
5
6
7

8
9 52. But the difference is not only in reporting—mass appraisal techniques must
10 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
11 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
12 parcel approach:
13
14
15

16 The mass appraisal technique is an appraisal method used to evaluate
17 a group of properties that are subject to similar market forces as of a
18 certain date through the use of market data, statistical analysis and
19 testing. As a result, the mass appraisal technique does not require or
20 involve analysis of each individual property’s specific data.
21
22

23 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
24
25

26 53. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
27 universe of properties as a given date using standard methodology, employing common data,
28 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
29 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
30 model” is “a mathematical expression of how supply and demand factors interact in a
31 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
32 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
33 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
34
35
36
37
38
39
40
41

42 54. Regardless of client direction, Mr. Macaulay is required to comply with
43 USPAP. So, if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have
44 been economically feasible because it would have taken “an incredible amount of time and
45
46
47

1 cost” (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an
2 appraisal consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8
3 (“performing an individual appraisal of each [condo] parcel would have been cost and time
4 prohibitive”).
5
6
7

8
9 55. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
10 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
11 value, fails to calibrate the model structure to determine the contribution of the individual
12 characteristics affecting value, and does not review the mass appraisal results against actual
13 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
14 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
15
16
17
18
19

20
21 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
22 proximity to the elements, the increase in market rent, market vacancy changes,
23 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
24 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
25 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
26 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
27
28
29
30
31
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36 relationship between characteristics that affect value, and to calibrate that model to specify how
37 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
38 21). The purpose is to rationally determine what characteristics will create value, and by how much.
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
2 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
3 were hypothetical, it was not possible to identify matched pair sales and no City witness
4 explained how ABS Valuation made adjustments to “comparable” sales in order to check
5 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
6 him to explain his model structure.
7

9
10
11

12 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
13 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
14 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
15 and appeals the Examiner’s denial of that motion.
16
17
18
19
20

21 58. Finally, Taxpayer’s property is not appurtenant—or even in close
22 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
23 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
24 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
25 property is not even within 500 road network feet from the core park improvements. And,
26 as described above, the special assessment is overstated because the Final Study makes no
27 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
28 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
29 improvements were not in place—and, in fact, much of the waterfront is a construction
30 zone following removal of the viaduct and now Pier 58 demolition. Under these
31 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
32 Mr. Macaulay at the very least should have discounted the special benefit estimates or
33 waited to perform the Study until the improvements were at least close to complete.

Erroneous Pre-Improvement Valuation

59. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's property.

60. The City's Final Study was used to compute the proposed final assessment of Helios' property. The City's Study purportedly uses data from the King County Department of Assessments,¹¹ but the pre-improvement valuation information in the Final Study does not accurately reflect this data. For example, the City's Study values Helios' property at \$298,884,000.00 as of October 1, 2019. However, the King County assessor determined the true and fair value of the property to be \$255,000,000.00, valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's valuation is 117.2% of King County's assessed value. The Final Special Benefit Study does not explain this difference—or any differences—between its pre-improvement valuation and its supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's Recommendation.

61. Further, the City's analysis was based on unreliable market data. The ABS appraisal overstated the before market value by about \$59 million. B. O'Connor's Jan. 31, 2020 Report (attached to Appeal Petition), Ex. 6. Based on our expert appraiser's appraisal review, the true and fair value of the Helios as of October 1, 2019 was \$239,884,000. *Id.* Additionally, for Helios, Mr. Macaulay undercounted the number of studios as compared with larger units, which resulted in a substantially inflated "Before" value. See 3/11/2020 (B. Scott) Hrg. Tr.) at 22:24-23:18; see also B. Scott's Supplemental Report for Helios

¹¹ See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet (providing a "County Link" to the King County Department of Assessment's online "eReal Property" search tool).

1 (using the correct data would have reduced “Before” value by \$37,849,000). Additionally,
2
3 Mr. Scott presented testimony that Mr. Macaulay incorrectly reduced the number of studios
4
5 by 56 and increased the number of larger, higher rent units in his income calculation, which
6
7 erroneously increased the property value and LID assessment. *See* 3/11/2020 Hrg. Tr. at
8
9 22:21-24:17. The City only responded to the unit mix error by claiming that if this
10
11 undercount in accurate, Mr. Macaulay will need to complete re-assessment of the Helios.
12
13 *See* 6/23/2020 Hrg. Tr. at 56:21-57:8. The Examiner Recommendation failed to make a
14
15 finding to address this error.

16
17 62. Thus, aside from multiple other reasons why computation of the special
18
19 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
20
21 improvement values that do not accurately reflect market data. For these reasons, Taxpayer
22
23 appeals the following portions of the Examiner’s Recommendation: Sections II.13, II.14,
24
25 and II.15.

26 27 **Erroneous Computation of Special Benefit**

28
29 63. “Special benefit” is “the increase in fair market value attributable to the local
30
31 improvements.” *Doolittle*, 114 Wn.2d at 103. “A benefit that a particular piece of property
32
33 may receive by reason of the improvement is not measured alone by the physical character
34
35 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
36
37 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
38
39 the particular tract or property benefited by the entire improvement, and is it assessed
40
41 proportionately with the other property included within the assessment district?” *Id.* 165–
42
43 66.

44
45 64. The proposed final assessment erroneously overstates the special benefit of
46
47 LID improvements in a number of ways.

1 65. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
2 the Helios, Mr. Macaulay assumed room/rental rates would increase by 1.75% (low) and
3 2.25% (high) due to the 2024 LID Improvements. Mr. Macaulay then uses these same
4 percentages (1.75% and 2.25%) to increase retail and parking. He then uses this
5 hypothesized increased revenue to calculate a new net operating income for the commercial
6 properties and capitalizes that to come up with an “After” valuation.
7
8
9
10
11

12 66. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
13 operating income remains the same as in the hypothetical “Before” condition but changes
14 the cap rate. For the Helios, the cap rate goes from 4.05% to 3.95% (low scenario, creating
15 a bigger value increase) and 3.99% (high scenario, creating a lower value increase).
16
17
18
19

20 67. Mr. Macaulay then averages his four “After” values to arrive at a final special
21 benefit conclusion. For the Helios, this is an increase in property value of 1.92% due to the
22 LID Improvements.
23
24
25

26 68. Mr. Macaulay offered little justification for his micro adjustments to revenue
27 and capitalization rates. When asked precisely what the basis is for his special benefit
28 percentage increases to revenue for each commercial property, he could not point to
29 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
30 is nothing in the report to allow a reader to understand how he came up with these
31 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
32 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
33 the basis for his belief that certain factors—liked increased connectivity—will increase
34 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
35 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
36 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
37
38
39
40
41
42
43
44
45
46
47

1 sources equally even though there was no separate analysis done for food and beverage or
2 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer's expert's
3 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
4 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer's
5 properties.
6
7
8
9

10 69. Mr. Macaulay testified that he used comparable sales as a reasonableness
11 check for commercial properties. But as explained above, no City witness has explained
12 how anyone, or all, of the sales are comparable to any particular commercial property within
13 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
14 in order to make sales "comparable," he would have had to make adjustments to account for
15 Before and After conditions, but there is no way to understand how adjustments were made
16 because he "didn't do a separate sales comparison approach where we showed adjustments
17 and whatnot." 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
18 his adjustments were reliable, he said it would have simply been a "test of reasonableness."
19 *Id.* at 127:10-128:24.
20
21
22
23
24
25
26
27
28
29

30 70. It also bears noting that any "internal review" of the special benefit estimates
31 would have been largely arbitrary given Mr. Macaulay's testimony that there is no margin of
32 error. Indeed, given all the same information, he seemed to suggest that it would be
33 perfectly reasonable for another experienced appraiser to come up with special benefit
34 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
35 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
36 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
37 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
38 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
39
40
41
42
43
44
45
46
47

margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still reasonable and unreasonable variations within the appraisal field. *See* Examiner’s Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or special because it is arbitrarily assigned; and it is too small to realistically be supported by appraisal techniques.

71. No evidence of special benefit. Meanwhile, there is “no actual evidence from any seller or purchaser that the price was higher because of the LID improvements.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not identified any seller or buyer, or any particular property where the existence of the LID improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has explained that the property has not increased rental rates or revenue due to the forthcoming LID Improvements, because, among other reasons (and apart from COVID), the improvements ABS believes will generate value do not exist and will not for a number of years to come. There are no comparable sales because the LID Improvements are not in place, nor will they be until the end of 2024 if completed on schedule.

72. The fair market value of Helios’ property has not changed due to increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially benefited from installation of new water main and fire hydrant where it was already adequately supplied with water and afforded adequate fire protection). And in any event, any value attributable to removal of the viaduct was to be excluded from the assessment calculation.

73. There is no special benefit to Helios because its apartment demand is driven by proximity to downtown job centers, and the average short tenancies means that the building tenants will likely turnover completely before LID improvements are delivered, providing no market justification for increased rents. In fact, the LID improvements

1 diminish the value of Helios property by drawing visitors away towards improvements that
2 do not abut the property and increasing competition in other areas of the city. *See Kuskys*, 85
3 Wn. App. 493 (testimony of owners' expert that LID actually diminished value of property
4 was sufficient to rebut presumption that assessment was proper). The ground floor retail
5 tenants will also suffer from a decrease in foot traffic, which will be pulled toward the
6 improved amenities around Pike Place Market. Mr. Macaulay did not account for any of
7 these impacts.
8

9
10
11
12
13
14
15 74. Moreover, the assessment formula is an attempt to distribute costs that do not
16 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
17 "merely a mathematical model that distributes costs").
18

19
20
21 75. The Special Benefit Study fails to address whether the \$346,000,000
22 estimated LID project cost takes into account the investment that would have occurred in the
23 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
24 invested. This is a critical component of estimating which properties receive a direct benefit
25 from the improvements, versus more incidental benefits further from the park.
26

27
28
29
30
31 76. Mr. Macaulay also included personal property in his valuation of hotels even
32 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
33 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
34 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
35 "[a]ppraisal applies to the land and building improvements only" (C-17 at 197). *See also*
36 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
37 receiving a disproportionately high LID assessment in comparison to other property types,
38 since hotels were the only property type subject to personal property LID assessments.
39
40
41
42
43
44
45
46
47 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO

1 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
2 notice procedures because hotel property owners only received notice that their real estate
3 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
4

5
6 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
7 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
8 a television at the waterfront Marriott is assigned a greater special benefit than the same
9 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
10 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
11 unreasonable to assign a value lift to personal property that is replaceable at the same cost
12 and may be obsolete before the LID improvements are even completed. Further, personal
13 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
14 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
15 be redone to correct for this error.
16

17
18 78. The proposed final assessment substantially exceeds the special benefit to the
19 property and is grossly disproportionate to similarly situated properties within the LID. For
20 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
21 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).
22

23 **State Environmental Policy Act and Other Environmental Permitting**

24
25 79. While this appeal is not challenging the City's environmental review and
26 permitting processes, those processes are relevant in determining the legality of the
27 assessments, and to assessing the delivery risk, the present value of the City's plans, and
28 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
29 pursue projects that have not yet undergone environmental review (thus limiting the choice
30 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
2 is just beginning. Further, the City has segmented environmental review, and still has a
3 gauntlet of federal, state and tribal review processes to complete before it will be clear what
4 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
5 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
6 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
7 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
8 committing to reconstruction of Pier 58 and major street improvements without
9 environmental review, or the City's Final Special Study has improperly included and is
10 proposing to assess the Taxpayer the costs and special benefits of improvements that may
11 not get built. Either way, it is faulty process.

22 **Due Process Rights**

23
24 80. The City's failed to notify Helios sufficiently in advance of the hearing to
25 allow Helios to obtain evidence and prepare to properly challenge the assessments. Because
26 LID assessments involve a deprivation of property, affected owners have the right to a
27 hearing as to whether the improvement resulted (or will result) in special benefits to their
28 properties and whether their assessments are proportionate, which necessarily includes the
29 right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
30 555, 569–70, 229 P.3d 761 (2010).

31
32 81. The LID statute specifies that cities must mail notices giving the time and
33 place of the hearing to the affected owners "[a]t least fifteen days before" the hearing and
34 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
35 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
36 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
37
38
39
40
41
42
43
44
45
46
47

1 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
2 secure their own appraisal), evaluate proportionality of the proposed assessments, and
3 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
4 for anybody to get an appraisal”).
5
6

7
8 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
9 Final Special Benefit Study has only been available for public review since January 7, 2020.
10 Due to this short time frame, Helios requested a prehearing conference and scheduling order
11 that would preserve and protect Helios’ right to analyze and respond to the Final Study,
12 obtain expert appraisal testimony, conduct depositions, and to accommodate preliminary
13 motions (*e.g.*, with respect to the interplay between SEPA and the City’s assessment of taxes
14 for Pier 58 and Pike/Pine improvements). The Hearing Examiner erroneously denied that
15 request. For this reason, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: I.B.
17
18
19
20
21
22
23
24
25

26 **VII. Relief Requested**

27 Helios respectfully requests that the City Council:
28

- 29 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection
30 and:
31
32 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
33 final assessment dated December 20, 2019; or
34
35 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
36 proposed final assessment to \$0 (zero), or such amount as Taxpayer
37 establishes at the hearing in this matter; or
38
39
40
41
42
43
44
45
46
47

- 1 c. Remand the matter to the Hearing Examiner or City appraiser to
2 recalculate and reduce Taxpayer's assessment using recognized
3 appraisal techniques consistent with USPAP and:
4
5
6 i. Excluding any property value increase attributable to viaduct
7 removal and other planned WSDOT Improvements;
8
9 ii. Taking into account the effects of COVID-19 pandemic on the
10 value of Taxpayers property and other relevant developments
11 since October 2019;
12
13 iii. Accounting for and excluding (1) any special benefits from
14 existing or planning improvements that already provide
15 similar benefits to Taxpayers property, and (2) any special
16 detriments from construction and other anticipated LID-
17 related disamenities;
18
19 iv. Accounting for and including only those actual benefits
20 anticipated to accrue to Taxpayer's property based on its
21 location relative to Pier 58, Overlook Walk, and the
22 Promenade, and specific elements of the LID Improvements;
23
24 v. Discounting anticipated special benefits to present value,
25 based on reliable estimates regarding when special benefits
26 will start accruing following completion of the LID
27 Improvements; and
28
29 vi. Accounting for such other issues specific to Taxpayer's
30 property relevant to calculation of such assessment; and
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47 2. Grant such further relief as the City Council deems just and proper.

EXAMINER’S FINDINGS AND
RECOMMENDATION ON EQR-SECOND
& PINE LLC’S OBJECTION TO
WATERFRONT LID NO. 6751 PROPOSED
FINAL ASSESSMENT FOR PARCEL NO.
7683890010

32
33 Eqr-Second & Pine LLC (“Helios”) files this appeal pursuant to RCW 35.44.070,
34 Seattle Municipal Code 20.04.090, City of Seattle Resolution 31915, the notice of the
35
36 Seattle Office of the City Clerk dated December 30, 2019, and the Hearing Examiner’s
37
38 Findings and Recommendation issued September 8, 2020 (“Examiner’s Recommendation”).
39

26 Facsimile: 206.359.9000
27

28
29 **III. Statement of Taxpayer's Interest**

30 Helios owns the property that is subject to the proposed final assessment described in
31
32 Section IV. The property at issue is a multifamily residential apartment building located a
33
34 block east of Pike Place Market, approximately two blocks from the proposed overlook
35
36 walk.
37

38 The basis of the proposed assessment is a Final Special Benefit/Proportionate
39
40 Assessment Study for Waterfront Seattle Local Improvement District ("Final Study"), dated
41
42 October 1, 2019 and prepared by Robert Macaulay with ABS Valuation (the City's
43
44 appraiser). The Final Study proposes assessments that are purportedly limited to paying for
45
46 the LID-funded components—namely, the Promenade, Overlook Walk, Pioneer Square
47

1 Street Improvements, Union Street Pedestrian Connection, Pike/Pine Streetscape
2
3 Improvements, and Pier 58 (together, the “LID Improvements”). The Final Study purports
4
5 to exclude charges for other improvement projects in the Central Waterfront, and
6
7 specifically those WSDOT had already agreed to pay for and construct: viaduct demolition,
8
9 the new Alaskan/Elliott Way surface street, the new/improved Seawall, the State Route 99
10
11 Tunnel, the Pier 62 rebuild, Bell Street improvements, and parking spaces WSDOT planned
12
13 fronting piers between Pike and Madison (together, the “WSDOT Improvements”). But
14
15 because construction was not complete on the LID Improvements or the WSDOT
16
17 Improvements at the time the Final Study was prepared, Mr. Macaulay’s October 1, 2019
18
19 “Before” and “After” valuations are both based on hypothetical conditions rather than actual
20
21 facts. On February 4, 2020, Taxpayer timely filed an objection to the assessment, which was
22
23 based on the Final Study.

24 25 **IV. Matter Under Appeal**

26 Helios appeals the Hearing Examiner’s recommendation to deny Taxpayer’s
27
28 objection to the City of Seattle’s Waterfront Local Improvement District No. 6751 proposed
29
30 final assessment dated December 30, 2019 against the following property:

31
32
33 King County Parcel No. 7683890010
34 Site Address: 206 Pine St., Seattle, Washington
35 Proposed Final LID Assessment for Parcel: \$2,244,356.42

36
37 See Examiner’s Recommendation at 61-62, 107. To avoid repetition, Taxpayer incorporates
38
39 the evidence and arguments raised before the Hearing Examiner into this appeal. In
40
41 particular, Taxpayer points the City Council to Taxpayer’s initial Appeal Petition, *Frye*
42
43 motion, Closing Brief submitted at the close of its case-in-chief (dated 4/16/2020), and
44
45
46
47

1 supplemental Closing Statement submitted at the close of the City's case-in-chief (dated
2 7/7/2020).¹
3

4 As discussed more fully below, Taxpayer specifically appeals the following Findings
5 and Recommendations in the Hearing Examiner's September 8, 2020 Recommendation:
6
7 Pages 61-62, 107, Sections II.6, II.7, II.13, II.14, II.15, II.18, II.19, II.20, II.21, II.22, II.23,
8 II.24, II.25, II.26, II.27, II.28, II.29, II.30, II.31, II.32, II.33, IV.A, IV.B.1, IV.B.2, IV.B.3,
9 IV.B.4, IV.B.5, IV.B.6, IV.B.7, IV.B.8, IV.B.9, IV.B.11(a), IV.B.11(a)(i), IV.B.11(a)(ii),
10 IV.B.11(a)(iii), IV.B.11(a)(iv), IV.B.11(c), IV.C.3, IV.C.4, IV.C.5, IV.C.7, IV.C.8, IV.C.9,
11 IV.C.11, IV.C.12, IV.C.14, IV.C.18
12
13
14
15
16
17

18 Taxpayer also appeals the Hearing Examiner's failure to make findings of fact or
19 recommendations on material issues raised during Taxpayer's appeal that were supported by
20 law, expert testimony, and fact. The Final Study fails in numerous ways to satisfy the basic
21 requirements of a LID assessment study, and the Examiner's Recommendation ignores the
22 many deficiencies in the Final Study. In fact, the only instances in which the Examiner
23 recommended anything other than denial of objectors' appeals were where the City's
24 appraiser confessed error. The appraiser's proposed assessments, and the Examiner's
25 Recommendations, would have the City impose arbitrary and capricious Waterfront LID
26 special assessments based on "fundamentally wrong methods."
27
28
29
30
31
32
33
34
35
36
37
38
39

40 ¹ Because the City has not provided "metered index numbers," our appeals cannot reference
41 them. See SMC 20.04.110. However, as part of the prehearing conference, we recommend that the
42 Public Works committee secure and provide appellants with such a record, so that the appeals can
43 then be supplemented with that additional information, so as to make the Committee's consideration
44 of each individual appeal more efficient and fair. Until that is provided, unless otherwise stated,
45 citations to the record before the Hearing Examiner are to the record for CWF-0233. Based on the
46 Examiner's electronic records, it appears most of the materials submitted on behalf of all objectors
47 retained by Perkins Coie are part of this case file.

1 The special benefit for which special taxes are assessed must be “actual, physical and
2 material and not merely speculative or conjectural.” *Heavens v. King Cty. Rural Library*
3 *Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965). For a proposed assessment roll to comply
4 with the law, the assessments may not materially exceed the actual special benefit conferred
5 by the LID Improvements. *Id.* The special benefit assessment cannot include charges for
6 general benefits enjoyed by the public at large. *Id.* Further, LID assessments must be
7 proportionate. *Id.* Failure to meet any one of these legal requirements is fatal to the
8 assessment. In this case, the proposed assessment fails each of the legal requirements for
9 special assessments and must be annulled as arbitrary or capricious, or founded on
10 fundamentally wrong methods.
11
12
13
14
15
16
17
18
19
20
21

22 **Legal Requirement:** Actual, non-speculative special benefit

23
24 **ABS Study:** Estimates a hypothetical benefit based on “Before” values that increase
25 “actual 2019” values (unstated) assuming the WSDOT Improvements were in place in
26 October 2019 (they were not), and an “After” value purporting to assess the value of
27 properties with the LID improvements in place at least five years before anticipated
28 completion.
29

30
31 **Legal Requirement:** Cannot materially exceed the special benefit

32
33 **ABS Study:** ABS calculates a special benefit of \$5,728,000 assuming the LID
34 Improvements were in place and providing benefit in October 2019. However, the LID
35 Improvements will not be completed until the end of 2024 if the City meets its current
36 schedule, and many of WSDOT’s alternative improvements will not be built. The present
37 value of future improvements deliverable in five years is significantly lower than the
38 current value of improvements that already exist. Further, ABS’s own materials show that
39 benefits may not accrue for at least five years after they are completed, in 2029. If the
40 hypothesized special benefits are discounted to present value, the assessments materially
41 exceed the hypothesized special benefits.
42
43
44

45 **Legal Requirement:** Actual, non-speculative special benefit—Date of valuation/COVID
46
47

1 **ABS Study:** The City has not finalized the assessment roll. After the City's appraiser
2 prepared his Final Study in October 2019, and the City issued its preliminary roll in
3 December 2019, COVID devastated downtown hotel and retail properties. The Hearing
4 Examiner finds that COVID is irrelevant because it happened after ABS's appraisal and
5 the City's preliminary roll. On the contrary, the City's assessments have yet to be made
6 and must be based on actual special benefits. While that does not mean ABS's appraisal
7 was wrong when completed, values and benefits need to be reanalyzed before assessments
8 are finalized in light of the unprecedented changes to the downtown real property market.
9

10
11 **Legal Requirement:** Actual benefit that cannot materially exceed special benefit—
12 Assessment cannot include value attributable to future WSDOT Improvements.
13

14
15 **ABS Study:** The City's appraiser asserts that the City is not collecting assessments "based
16 on the value of WSDOT's planned improvements." See Final Study at 3. However, the
17 City's own expert, Mark Lukens, acknowledged that was false. In the "Before" condition,
18 the City's appraiser increased 2019 property market values as though WSDOT had
19 completed its work by 2019. The proposed assessment is against this hypothetical
20 WSDOT-enhanced "Before" value, which ABS acknowledges is (to some unstated extent)
21 higher than actual 2019 market values. The City is collecting an assessment against both
22 the 2019 current values and the phantom 2019 WSDOT market value lift, in direct
23 contravention of law and the City's promise not to impose an assessment based on the
24 value of viaduct demolition and the other components of WSDOT's planned work.
25

26
27 **Legal Requirement:** Benefits must be special, not general
28

29
30 **ABS Study:** The City's appraiser fails to determine or explain what general benefits arise
31 due to the LID Improvements. However, the far-reaching and public nature of the
32 improvements make any benefit arising from them general—not special.
33

34
35 **Legal Requirement:** Benefits must be "physical and material and not merely speculative
36 or conjectural"
37

38 **ABS Study:** Not only are the improvements not yet "physical or material," but
39 environmental review and permitting for the City's proposed LID Improvements is not
40 complete, and the LID improvements are not anticipated to be complete until the end of
41 2024. The appraiser nevertheless hypothesized that they were all completed as of 2019 in
42 a manner consistent the City's then-current proposals, which were in many respects merely
43 conceptual designs.
44

45
46 **Legal Requirement:** Must comply with appraisal standards
47

1 **ABS Study:** ABS's valuation methodology cannot be tested. It is a hybrid of "Individual" and "Mass" appraisal techniques, but fails to meet USPAP requirements for either. Until
2 the Examiner admonished ABS, ABS even asserted its analysis was "confidential and
3 proprietary." ABS's analysis and conclusions can neither be tested nor replicated. The
4 Final Study fails to meet basic standards for admissibility and must be remanded.
5
6

7
8 **Legal Requirement:** Actual and measurable special benefit
9

10 **ABS Study:** ABS's proposed assessments are assigned rather than measured, as
11 demonstrated by formulas in ABS's spreadsheets. The percentage assignments are based
12 on a host of "micro-judgments" that are not supported by any documentation, nor capable
13 of replication or quality assurance/quality control. The assessments are undocumented,
14 unreliable, and not supported by empirical studies, data, or reports.
15
16

17 **Legal Requirement:** Actual and measurable special benefit—Park benefits must be
18 supported by empirical evidence
19

20 **ABS Study:** Dr. John Crompton, the world's preeminent expert regarding the economic
21 value of parks and other public amenities and on whom ABS purported to rely, testified
22 that ABS had completely misapplied his work and dramatically overstated both the
23 distance to which economic benefits might extend from the LID Improvements and the
24 extent of any anticipated benefit within the potentially benefited area.
25
26

27 **Legal Requirement:** Actual special benefit—Must take into account potential
28 disamenities
29

30 **ABS Study:** The appraiser ignores the negative value impact of five years or more of
31 construction, as well as other potential disamenities associated with public places.
32
33

34 **Legal Requirement:** Cannot prematurely commit to build
35

36 **ABS Study:** The City has not completed NEPA review or other entitlement process for its
37 Pier 58 plans or planned Pike Pine or Pioneer Square improvements for which assessments
38 are being imposed. But finalizing the roll is a commitment by the City to build the
39 improvements, which is a violation of legal process and commits the City to build things it
40 may not secure permission to build.
41
42
43
44
45
46
47

1 In addition to these general objections, there are property-specific issues raised by
2
3 Taxpayer as to which the Examiner also erred, discussed in the course of the appeal
4
5 statement below.
6

7 **V. Standard of Review**
8

9 “When considering the assessment roll, the city council sits ‘as a board of
10 equalization.’” *Hasit, LLC v. City of Edgewood*, 179 Wn. App. 917, 948, 320 P.3d 163
11 (2014) (quoting RCW 35.44.080(2)). “As such, the council or hearings officer ‘will consider
12 the objections made and will correct, revise, raise, lower, change, or modify the roll or any
13 part thereof or set aside the roll.’” *Id.* at 949 (quoting RCW 35.44.080(3)).
14
15
16
17

18 The proposed assessments are presumed correct, “unless overcome by clear, cogent
19 and convincing evidence.” *Hasit*, 179 Wn. App. at 948. This standard is less deferential
20 than the heightened presumption of correctness on judicial appeal because “applying these
21 elevated standards at the municipal hearing would afford unwarranted deference to a report
22 prepared under contract by a private appraisal firm.” *Id.* at 949. Importantly, “a
23 presumption is not evidence and its efficacy is lost when the other party adduces credible
24 evidence to the contrary.... The sole purpose of a presumption is to establish which party has
25 the burden of going forward with evidence on an issue....” *In re Indian Trail Trunk Sewer*
26 *Sys.*, 35 Wn. App. 840, 843, 670 P.2d 675 (1983). In other words, because objectors have
27 presented credible evidence showing that the City’s proposed assessment is arbitrary,
28 capricious and founded on a number of fundamentally wrong foundations, the burden shifts
29 to the City to prove the assessments are actual, measurable, special, non-speculative and
30 proportionate. The City failed that burden.
31
32
33

41
42
43
44
45
46
47

1 **VI. Grounds for Appeal**

2 Helios appeals the Hearing Examiner's Findings and Recommendations on the
3 following grounds.
4

5 **Taxpayer Not Required to Provide A Special Benefit Study**

6
7 1. Contrary to the Examiner's findings and recommendations, there is no
8 requirement that experts or property owners provide an alternative special benefit
9 calculation under these circumstances—to do so would also require the same improper
10 speculation the City's expert engaged in, given the timing and information provided. *See,*
11 *e.g.,* Decl. of Anthony Gibbons ISO Closing Stmt., ¶ 3(dated 7/7/2020); *see also* Decl. of
12 Ben Scott ISO Closing Stmt., ¶ 3(dated 7/7/2020); Decl. of Brian O'Connor ISO Closing
13 Stmt., ¶ 3(dated 7/7/2020). A Washington court has explained: "[W]e have explicitly
14 rejected an argument that, because certain protestors 'failed to offer expert testimony at the
15 city council hearing[,] the presumptions [in favor of the assessment] were still operative as
16 to their property.'" *Hasit*, 179 Wn. App. at 946 (quoting *In re Indian Trail Trunk Sewer*, 35
17 Wn. App. at 843); *see also Kuskay v. City of Goldendale*, 85 Wn. App. 493, 933 P.2d 430
18 (1997) (although appraiser did not submit an appraisal, he provided expert opinion showing
19 that improvements actually diminished value of the property). In fact, no independent
20 evidence is required at all if, for example, objectors show that the assessment was grounded
21 on a fundamentally wrong basis due to an error in the City's appraiser's methods—as is the
22 case here. *Hasit*, 179 Wn. App. at 947 (citing *Doolittle v. City of Everett*, 114 Wn. 2d 88,
23 106, 786 P.2d 253 (1990)). As a simple example, a property owner could simply point out
24 that the square footage assumed in the City's appraisal was incorrect.
25

26
27 2. On March 5 and 11, 2020, Helios presented testimony from experts Ben Scott
28 and Brian O'Connor. The Hearing Examiner failed to meaningfully respond either the expert
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 testimony or the expert appraisal reviews, including testimony by Mr. Scott showing that
2 Mr. Macaulay incorrectly reduced the number of studios at the Helios by 56 and increased
3 the number of larger, higher rent units in his income calculation, which erroneously
4 increased the property value and LID assessment. *See* 3/11/2020 Hrg. Tr. at 22:21-4:17.
5
6 Instead, the Hearing Examiner simply dismissed Helios' expert evidence as insufficient
7 appraisal evidence. *See* Examiner's Recommendation at IV. C.7-9. This is contrary to law.
8
9

10
11
12 3. For these reasons, Taxpayer appeals the following portions of the Examiner's
13 Recommendation: Sections II.13, II.14, II.15, IV.A, IV.B.11(a), IV.C.7, IV.C.8, IV.C.9, and
14 IV.C.11.
15
16

17
18
19 **No Actual, Measurable, Non-speculative, Proportionate, Special Benefit**
20

21 4. RCW 35.43.040 provides cities and towns authority for ordering local
22 improvements and for levying and collecting special assessments "on property specially
23 benefited thereby[.]" The cost and expense of the local improvement "shall be assessed upon
24 all the property in accordance with the special benefits conferred thereon." RCW 35.44.010.
25
26

27 5. No analysis of general benefits. Special assessments have been "held valid
28 for the construction and improvement of streets, curbs, gutters, sidewalks, and for the
29 installation of sanitary and storm sewers, drains, levees, ditches, street lighting, and water
30 mains." *Heavens*, 66 Wn. 2d at 563. "All such assessments have one common element:
31 they are for the construction of local improvements that are appurtenant to specific land and
32 bring a benefit substantially more intense than is yielded to the rest of the municipality." *Id.*
33
34

35 6. Helios' property is not specially benefited by the LID Improvements. The
36 primary purpose and effect of the LID Improvements are to benefit "members of the whole
37 community" and the public at large. *See, e.g., id.* at 565 ("it is plain that a public library is
38 for the benefit of the members of the whole community individually and collectively who
39
40
41
42
43
44
45
46
47

1 may be served by it"). Mr. Macaulay's own chapter of the LID Manual states clearly that
2 appraisers should "[c]onsider general benefits as well as special benefits" (Hrg. Exhibit 117
3 (LID Manual) at 58²) and he admits that "general benefits probably accrue to the LID area"
4 as well (*see* 6/23/2020 Hrg. Tr. at 22:4-12). Taxpayer's expert confirmed that if an
5 appraiser "identifies both general and special benefits, these benefits should be clearly
6 distinguished and explained, and only special benefits should be included in the After
7 assessment." Gibbons Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020); *see also* 3/3/2020 (A.
8 Gibbons) Hrg. Tr. at 96:6-97:4; 3/5/2020 (B. O'Connor) Hrg. Tr. at 158:13-159:8, 192:8-
9 193:2. It is undisputed that Mr. Macaulay did not analyze or measure general benefits,
10 including those arising from construction necessary to meet basic design standards. *See*
11 Hrg. Exhibit 117 (LID Manual) at 58 ("[c]onsideration may also be given to those
12 construction costs related to meeting design standards which may be general benefits as
13 distinct from construction costs emanating from requirements of the LID project"). To the
14 extent Taxpayer's property may benefit from the LID improvements, the benefit is general
15 and incidental, and failure to consider general benefits was a fatal flaw in the City's
16 methodology. For these reasons, Taxpayer appeals the following portions of the Examiner's
17 Recommendation: Sections IV.B.7, and IV.B.11(a)(i), IV.B.11(a)(iv), and IV.C.4.

18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
33
34
35 7. LID Improvements not necessary. Unlike typical LID projects, the
36 Waterfront LID improvements are largely unnecessary to the functionality of any particular
37 property, including Taxpayer's property. *See In re Schmitz*, 44 Wn.2d 429, 433, 268 P.2d

40
41
42
43
44
45
46
47

² "Hrg. Exhibits" refer to exhibits that were submitted on behalf of multiple objectors represented by Perkins Coie during its seven days of hearing before Hearing Examiner Vancil (March 3, March 5, March 11, March 12, April 13, April 14, and April 16, 2020) and during the two days of cross-examination of the City's witnesses (June 23, 25 and 26, 2020). For ease of reference, Taxpayer has attached a master list of the hearing exhibits as Attachment A to this appeal notice.

1 436 (1954) (assessment levied for the purpose of raising the grade of a road by 16 to 18 feet
2 held invalid where owners would have benefitted equally from increase of only 9 feet);
3
4 *Appeals of Jones*, 52 Wn.2d 143, 324 P.2d 259 (1958) (assessment against land at
5
6 intersection for new water main for hydrant held invalid because land was already afforded
7
8 functional hydrant at nearby street). Here, Taxpayer provide evidence that the LID
9
10 Improvements are not necessary to the business of their income-producing properties, all of
11
12 which already have sufficient access to the waterfront, downtown restaurants, and other
13
14 amenities necessary for their clients and users. And for residential properties, the assumption
15
16 that an increase in tourism will cause lifts in property value is both anecdotally and
17
18 empirically unsupported. The fact that there is no case law differentiating between binary
19
20 improvements and parks does not change the law prohibiting assessments on properties
21
22 already adequately served by existing amenities. *See* Examiner's Recommendation at
23
24 IV.C.3 (reasoning that "no case law is provided to support the differentiation between a
25
26 hardscape benefit and the more ephemeral benefits of park"). Nor does the Examiner's
27
28 reasoning excuse the City's failure to account for existing amenities as part of the special
29
30 benefit calculation. As Dr. Crompton testified, existing view amenities may in fact diminish
31
32 the incremental effect of new park improvements on the value of properties, much like
33
34 turning on a weak light in an already brightly illuminated room. *See* Hrg. Exhibit 94
35
36 (Crompton's Report) at 12-13.

37
38
39 8. To the extent benefits can be considered "special" as opposed to general, they
40
41 are nominal or nonexistent for many properties even in the Central Waterfront, which
42
43 already has a promenade, viewpoints, as well as connecting streets and bridges. *Douglass v.*
44
45 *Spokane Cty.*, 115 Wn. App. 900, 64 P.3d 71 (2003) (properties' fair market value did not
46
47 change due to expansion of sewer service *near* owners' parcel which were already

1 connected). Here, Helios will not specially benefit from the LID Improvements because its
2 apartment demand is driven by proximity to downtown job centers, restaurants, night life,
3 and shopping. *See* 3/5/2020 (E. Leigh) Hrg. Tr. at 220:25-221:6. Even if the City could
4 assess for a view change (and it has promised not to assess for viaduct removal), the fair
5 market value of Helios' property has not changed because the LID Improvements have not
6 improved the property's waterfront view or access to the waterfront, nor will they when the
7 City anticipates completion in 2024. For these reasons, Taxpayer appeals the following
8 portions of the Examiner's Recommendation: Sections IV.C.3, IV.B.9, and IV.C.3.
9

10
11
12
13
14
15
16
17 9. No analysis of special detriments. The Final Study fails to properly account
18 for special detriments. *See Kusky*, 85 Wn. App. at 501 (city failed to consider the costs to
19 owners for removal and cleanup of underground storage tanks discovered during the
20 improvement project). The Property owner representative for Helios, Ed Leigh, testified that
21 property values may in fact be negatively impacted by the LID Improvements due to loss of
22 parking, increased traffic and noise, and increased potential for crime, homelessness and
23 sanitation issues. *See* 3/5/2020 (E. Leigh) Hrg. Tr. at 223:13-225:14; 227:8-229:10. And
24 Helios does not expect near term the increases assumed in ABS Valuations' spreadsheets or
25 the Final Study. Although Mr. Macaulay claims he analyzed impacts on the City's planned
26 elimination of 450 parking stalls on a parcel-by-parcel basis, there is no explanation of how
27 lost parking might be a detriment, and no property-specific parking analysis in any of his
28 materials. 6/23/2020 Hrg. Tr. at 185:20-24; 186:14-187:12.
29
30
31
32
33
34
35
36
37
38
39

40
41 10. Likewise, there was no analysis of the risks associated with disamenities such
42 as increased crime, homelessness and unsanitary conditions, and Mr. Macaulay did not
43 quantify the risk that the waterfront will not in fact be maintained. 6/23/2020 Hrg. Tr. at
44 193:21-194. Instead he relied on the maintenance ordinance (Ordinance 125761) to dismiss
45
46
47

1 these concerns. However, Mr. Foster explained that although the ordinance anticipates that
2 City Council will appropriate \$4.8M each year for waterfront operation, it does not bind any
3 future city councils or guaranty funding. 6/26/2020 Hrg. Tr. at 12:7-20; 15:2-10.³ And if
4 the City fails to appropriate that baseline funding, there is an option to suspend or terminate
5 the maintenance agreement. *Id.* at 13:4-14:2.
6
7
8
9

10
11 11. There was also no consideration of negative impacts from another four-plus
12 years of construction (at least). Mr. Macaulay reasoned that construction impacts are not
13 compensable in eminent domain cases. However, there is nothing in the LID statutes or case
14 law allowing him to dismiss these actual, non-speculative impacts. Because future special
15 benefits calculations are inherently speculative, Washington's eminent domain statute
16 specifically allows condemnees to postpone special benefits assessments until improvements
17 are in place. RCW 8.25.220; *State v. Green*, 90 Wn.2d 52, 56, 578 P.2d 855 (1978).
18 Moreover, the studies that Mr. Macaulay relied on demonstrate that construction disamenity
19 is real and does have a near-term negative effect on property values. *See* Gibbons Decl. ISO
20 Closing Stmt. (dated 7/7/2020), Ex. C at 24 (during construction of Rose Kennedy
21 Greenway, the Greenway district "significantly" lagged in value). For these reasons,
22 Taxpayer appeals the following portions of the Examiner's Recommendation: Sections
23 II.25, IV.B.8, and IV.B.9.
24
25
26
27
28
29
30
31
32
33
34
35

36 12. Special benefit estimate is speculative. When calculating a special benefit,
37 "[f]air market value cannot include a speculative value." *Bellevue Plaza, Inc.*, 121 Wn.2d at
38 411. "When an appraiser uses a factor 'beyond the knowledge of reasonable certainty', it
39
40
41
42
43
44

45 ³ The Examiner suggests that the issue of whether future City Councils are bound is not at issue.
46 However, the issue of maintenance was part of Mr. Macaulay's special benefit analysis and therefore
47 the assessment amounts.

1 becomes pure speculation.” *Id.* (quoting *In re Local Imp.* 6097, 52 Wn.2d 330, 335–36, 324
2 P.2d 1078 (1958)).
3

4
5 13. Assuming without conceding that one day, the City’s planned LID
6 Improvements might increase the value of neighboring properties to some extent, that
7 potential benefit is many years away and speculative. While appraisers tolerate some degree
8 of estimation and judgment, Taxpayer’s expert testified that Mr. Macaulay’s Final Study is
9 far too speculative to satisfy industry practices and standards.
10

11
12 14. Although LIDs are sometimes finalized prior to completion of improvements,
13 this is typically just six month or a year prior, and the assessments are otherwise supported
14 by the near-term construction of the improvements. *See* 3/3/2020 (A. Gibbons) Hrg. Tr. at
15 117:20-118:9; 119:5-120:9; 122:15-124:9. By contrast, the estimated special benefits here
16 will not be realized for four or five years. In the meantime, there is permitting risk,
17 construction risk, and general economic risk (e.g., COVID), which renders ABS’s 2019
18 hypotheticals inherently speculative and unreliable because it is impossible to predict which,
19 and to what extent, different factors will impact value. *Id.* at 51:13-53:5. Ultimately, Mr.
20 Macaulay concedes that there is inherent uncertainty in valuing the future delivery of
21 projects because “we can’t read the future.” 6/23/2020 Hrg. Tr. at 79:18-80:8. As he
22 testified: “I just don’t know what the market value would be as of the date the project would
23 be finally constructed” because “[t]here could be a lot of elements in the market that did
24 occur between now and then that impact value.” 6/25/2020 Hrg. Tr. at 212:9-13; *see also id.*
25 at 211:8-20 (no way to know if his estimates will be higher or lower than comparable sales
26 in 2024 because “markets tend to fluctuate over time” and “I can’t predict the future”).
27
28

29 15. The record is clear that while no one can know what “special benefit” might
30 accrue to these properties in four years (if any), we do know that there are no actual benefits
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 now. The LID improvements provide no immediate special benefit to property owners
2 because the bulk of the components are still in design stages. *Cf. Hasit*, 179 Wn. App. 917
3 (assessments calculated on a fundamentally wrong basis by including costs for an oversized
4 sewer system for future users). For example, notwithstanding the questionable hypothesis
5 that apartments will benefit from an expected increase in tenant interest when the
6 improvements are complete, it is undisputed that tenants are not coming in larger numbers
7 and paying higher rental rates now because of something happening five years down the
8 road. See O'Connor Decl. ISO Closing Stmt., ¶ 7 (dated 7/7/2020) (no apartment leased
9 today for 18 months would rent at a higher rate due to improvements coming in 2024).
10

11 16. Further, there are no “plans and specifications” on file with the Clerk’s
12 Office for the LID Improvements, and it is unlawful to move to final assessments without
13 such “plans and specifications.” Ordinance 125760, Section 3; *Local and Road Improvement*
14 *Districts Manual for Washington State 6th Edition*, pp. 3, 19, 31, 44 (2009). It is also
15 unlawful to bind future City Councils and future budgets to spend hundreds of millions of
16 dollars on projects still early in the design process. See Washington Attorney General
17 Opinion 2012 No. 4 (May 15, 2012)); *cf. City of Seattle v. Rogers Clothing for Men, Inc.*,
18 114 Wn.2d 213, 787 P.2d 39 (1990) (assessment upheld because City has apportioned costs
19 of programs and included “only so much of the overall costs” that took place within and
20 benefitted the assessed properties).
21

22 17. The COVID-19 crisis highlights how fundamentally speculative and unfair it
23 would be to base a special benefit assessment on twin 2019 hypotheticals for improvements
24 anticipated to be delivered five years later. Even before COVID, it was speculative to
25 assume that market highs experienced in October 2019¹ would be sustained through 2024,
26 after an already extraordinarily long expansion period. See, e.g., 3/5/2020 (E. Leigh) Hrg.

40
41
42
43
44
45
46
47

1 Tr. at 119:15-123:6; 3/3/2020 (A. Gibbons) Hrg. Tr. at 117:6-118:9, 119:17-120:9. And Mr.
2
3 Macaulay conceded: “[W]hen I was doing my analysis in October 2019, who would have
4
5 thought that this COVID issue would happen?” 6/23/2020 Hrg. Tr. at 80:3-8. At his
6
7 deposition in late February, his “thought process was that the market was going to continue
8
9 to go up,” but now, they are already irrelevant. Id.; see Gibbons Decl. ISO Closing Stmt. at ¶
10
11 12 (dated 7/7/2020). Although COVID does not change actual values as of October 2019
12
13 (see Examiner’s Recommendation at 109), the pandemic has impacted *current* values and
14
15 rendered the hypothetical October 2019 Final Study valuations outdated.

16
17 18. As another example of how future events could affect the accuracy and
18
19 reliability of the City’s 2019 proposed assessment, Taxpayer recently requested the Hearing
20
21 Examiner re-open the record to allow the City to explain whether the assessments against
22
23 property owners within the LID are, in fact, being used by the City to fund the emergency
24
25 dismantling and reconstruction of Pier 58.⁴ It has been reported that the City plans to use
26
27 LID funding to pay for the expedited, emergency repairs and replacement.⁵ If true, the City
28
29 would be improperly imposing costs on property owners within the LID for improvements
30
31 that are required to maintain the safety of Pier 58 and to remove a threat to critical salmon
32

47

1 habitat and City infrastructure—this does not provide any special benefit to LID property
2 owners.
3

4
5 19. There is also no certainty the improvements will be delivered on time. Mr.
6 Foster testified that 2024 is not a hard deadline for delivery of the improvements, and a
7 delay in construction schedule would not constitute a “material change” under the City
8 Council’s ordinance authorizing the improvements. In other words, the City cannot
9 guarantee that the LID Improvements will be delivered as expected in 2024 or any time after
10 that. 6/26/2020 Hrg. Tr. at 18:5-13. Meanwhile, Taxpayer’s experts Reid Shockey and
11 Richard Shiroyama testified via declaration as to the City’s permitting gauntlet, and
12 potential delays and project changes inherent in those processes, that call into question the
13 assumption that the City can deliver the LID Improvements by 2024. Hrg. Exhibits 110
14 (Shockey Decl., dated 4/15/2020); 111 (Shiroyama Decl., dated 4/15/2020); 107 (Anderson
15 Decl., dated 4/15/2020).
16

17
18 20. Unsurprisingly, of the over one hundred LIDs Mr. Macaulay has worked on,
19 he could not point to a single one where the assessment roll was finalized five years in
20 advance of the anticipated project completion. *See* 6/23/2020 Hrg. Tr. at 16:1-22. Likewise,
21 he has never recommended final special assessments based on designs less than 30 percent
22 complete, other than in this case. *Id.* at 17:22-18:2. Nevertheless, he proceeded with his
23 2019 hypothetical before, hypothetical after analysis because the City “wanted to get
24 moving ahead with the project” and gave him assurances that designs would not change. *Id.*
25 at 66:17-25. He performed no independent due diligence to determine the reliability of the
26 City’s estimates for completion of the LID Improvements, or to ensure that proposed
27 designs or cost estimates were not going to materially change. *Id.* at 78:14-79:13. Yet he
28 agreed that if any of his assumptions are incorrect, his opinion of market value would need
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 to be revised. 6/23/2020 Hrg. Tr. at 68:19-69:8; *see also id.* at 64:13-65:12; 67:10-16;
2
3 68:11-18.

4
5 21. The City has cited no authority—and Taxpayer is aware of none—that
6
7 affirms the use of hypothetical, anticipatory Before and After values in order to estimate and
8
9 assess taxes for “actual” special benefits that will not accrue for another five years (if all
10
11 goes off without a hitch). To the contrary, the hypothetical assumption that all of the Before
12
13 and After Improvements are constructed as of October 1, 2019 allows Mr. Macaulay to base
14
15 his estimates on “pure speculation.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 411. For these
16
17 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
18
19 Sections II.6, II.7, II.33, IV.B.1, IV.B.2, IV.B.3, IV.B.5, IV.B.6, IV.B.11(c), IV.C.12,
20
21 IV.C.14, and IV.C.18.

22
23 22. Failure to discount special benefit estimates to account for risks and present
24
25 value. Due to the inherent uncertainty, Taxpayer’s expert opine that the Final Study should
26
27 have accounted for risks associated with delivery of the improvements (including permitting
28
29 risk, construction risk, general economic risk) and any special damages associated with
30
31 interim construction. 3/3/2020 (A. Gibbons) Hrg. Tr. at 119:17-120:9, 59:20-60:20. In
32
33 addition, as is typical appraisal practice, Mr. Macaulay should have discounted the
34
35 anticipated 2024 benefit to account for the time value of money. *Id.* at 54:17-55:1; *see also*
36
37 Gibbons Decl. ISO Closing Stmt., ¶ 13, 16 (dated 7/7/2020) (“Appraisers routinely consider
38
39 the impact of future conditions [through] discounted cash flow analysis.”).

40
41 23. Mr. Macaulay acknowledged that appraisers can discount the value of a
42
43 future condition not in place at the date of valuation and can discount for the time value of
44
45 money. 6/23/2020 Hrg. Tr. at 74:1-75:1. And he agreed that if improvements are not built
46
47 until 2024, “[y]ou would be discounting it back to a present value.” *Id.* at 77:2-19.

1 Discounting would also have been consistent with his approach for analyzing special
2 benefits to vacant land. He testified that the difference between similarly situated vacant
3 sites slated for development and already developed sites was that the labor, capital and risks
4 associated with development had not yet been borne for those vacant sites. Therefore, the
5 vacant land was not valued as highly and received a smaller assessment. 6/19/2020 Hrg. Tr.
6 at 28:1-13; *see also* 6/18/2020 Hrg. Tr. at 205:9-12. *A fortiori*, a project that has not been
7 fully permitted, has not completed environmental review, and has not reached full design is
8 presently worth significantly less.
9

10
11 24. The City's hotel expert, Mr. Lukens, likewise explained that to calculate
12 present value, an appraiser would consider discount rates for land development to account
13 for inflation, entitlement risks, cash flow issues, construction, etc. 6/26/2020 Hrg. Tr. at
14 184:5-185:22. And Mr. Lukens agreed that it would be reasonable for an appraiser to refer to
15 the PricewaterhouseCoopers Korpacz study for applicable discount rates. *Id.* at 187:18-
16 189:23; *see also* Gibbons Decl. ISO Closing Stmt, ¶ 17 (dated 7/7/2020).
17

18
19 25. Applying the Q19 Korpacz rates and assuming *arguendo* that Macauley's
20 total estimated special benefit is correct, \$447,908,000 discounted to 2019 present value for
21 raw land to be developed by 2024 is approximately \$153,600,000. *See* Gibbons Decl., ¶ 17,
22 Ex. A. Notably, this is lower than the City's proposed \$171,000,000 assessment. Thus,
23 ignoring momentarily all of the other methodological and other flaws discussed here and in
24 Taxpayer's case-in-chief, and assuming that the LID Improvements provide special benefits
25 as soon as they are complete in 2024, Mr. Macaulay's hypothetical assessment materially
26 exceeds special benefits when reduced to present value. Further, to the extent the City is
27 arguing that because they are permitted to assess 100% of the special benefit, the special
28 benefit estimate can be off by 60.8% because they only assess 39.2% of that benefit, the City
29
30
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 is again wrong. After applying proper discounting, the City's proposed special benefit
2 assessment is far more than 39.2% of the total estimated special benefit, and in fact exceeds
3 100% of the total estimated special benefit.
4

5
6 26. But even the assumption that the LID improvements would deliver benefits
7 as soon as they were complete in 2024 is not supported by the studies Mr. Macaulay relied
8 on. Rather, those studies demonstrate that a discount period of five years is conservative.
9
10 *See* Gibbons Decl. ISO Closing Stmt., ¶ 18 (dated 7/7/2020). In particular, HR&A's study
11 on the Rose Kennedy Greenway in Boston (included in Mr. Macaulay's backup files)
12 indicates that during the construction period, the Greenway district "significantly" lagged in
13 value (i.e., construction disamenity). *Id.*, Ex. C at 24. That study also recognized that the
14 "reorientation of development to capture value takes time"—specifically, 12-13 years. *Id.* at
15 30-31 (discussing New York City High Line and San Francisco Embarcadero
16 improvements). Given the lengthy delay, any prediction of future special benefits is
17 speculative, especially during the construction phase where values are likely to decline. And
18 assuming the LID Improvements take a similarly long period of time after they are complete
19 to start producing tangible property value benefits, each additional year of delay results in
20 further discount to the present value of any future alleged benefit. Gibbons Decl. ISO
21 Closing Stmt., ¶ 19, Ex. A.
22
23
24
25
26
27
28
29
30
31
32
33
34
35

36 27. Applying the same discounting methods described above and in Mr. Gibbons
37 declaration, the 2019 net present value of ABS's estimate for benefits that actually start
38 accruing in 2029 is just \$42,204,597, only 9.4% of the benefits ABS hypothesized, even
39 before applying the 39.2% percentage assessment. *Id.* For Taxpayer, this means at most the
40 100% assessment should be no more than \$539,577.60. Anything more would permit the
41 City to assess Taxpayer based on a hypothetical assumption that these improvements are in
42
43
44
45
46
47

1 place and providing benefit, and ignore the risks, construction disamenity, and time value of
2 money that normal appraisal principles would take into account. *Id.*, ¶ 20. Proportionality
3 would counsel that the assessment should be only 39.2% of that assessment cap, or
4
5 \$211,514.42.
6
7

8
9 28. Attachment C includes two Excel spreadsheets applying these discounting
10 methods to Taxpayer's assessment. It is undisputed that special benefits will not actually
11 accrue until the LID Improvements are complete in 2024. Accordingly, the first spreadsheet
12 demonstrates that discounting the City's hypothetical October 2019 special benefits to
13 present value would reduce Taxpayer's assessment to \$770,011, exclusive of any other
14 flaws in the City's proposed assessment. The second spreadsheet shows even more drastic
15 reductions after taking into account (1) Taxpayer's experts' estimated "Before" valued based
16 on actual data from Taxpayer; (2) a rough discount for property value loss due to COVID-
17 19; and (3) discounting to present value for 5 years (*i.e.*, from 2024 when the City
18 anticipates completing the LID Improvements) and 10 years (*i.e.*, from 2029 to account for
19 the time it takes for the improvements to capture property value.) After such reductions,
20 Taxpayer's assessment would be just \$540,759 (for the 5-year discount) or \$148,582 (for the
21 10-year discount). Neither of these spreadsheets address other issues raised by Taxpayer's
22 appeal, but are intended to help demonstrate how unfair and inflated the City's proposed
23 hypothetical assessment is. The Hearing Examiner's Recommendation simply dismisses
24 Taxpayer's discounting argument without legal or factual analysis; that failure is error.
25
26
27
28
29

32
33
34
35
36
37
38
39
40

41 **Appraisal and Assessment Calculation Methods Are Flawed**

42 29. The "general rule is that each lot, piece, or parcel of land should be assessed
43 separately" for purposes of local improvement district special assessment. *Doolittle*, 114
44 Wn.2d at 97.
45
46
47

1 30. It is proper to sustain a challenge to an assessment, even without the appraisal
2 testimony from the owner, where the objector's expert establishes that the assessment was
3 "clearly grounded upon a fundamentally wrong basis" due to an error in the method
4 employed by the City's appraiser. *See, e.g., Doolittle*, 114 Wn.2d at 106.
5
6

7
8
9 31. The City's appraiser purports to utilize the income method of valuation but
10 relied on inaccurate revenue and market data, as discussed further below.
11

12
13 32. The City's appraiser purports to utilize the comparable sales method of
14 valuation, but no City witness attempted "to characterize any one, or all of them, as
15 comparable to [Taxpayer's property]." *See Bellevue Plaza*, 121 Wn.2d at 406 (finding
16 "several serious flaws" in ABS's LID analysis in that case, including that the appraiser
17 "attache[d] a list of a number of land sales within the CBD, but ma[de] no attempt to
18 characterize any one, or all of them, as comparable to any particular property within the LID").
19 And no City witness could explain how specific adjustments were made to these sales to
20 account for value increases due to the hypothesized Before and After Improvements. For this
21 reason, Taxpayer appeals Section II.23 of the Examiner's Recommendation.
22
23

24
25 33. Special assessment improperly includes value lift from the Before
26 Improvements. Mr. Macauley is required to exclude (and claims to have excluded) any
27 assessment based on value attributable to demolition of the viaduct and the planned WSDOT
28 Improvements, which WSDOT had independently committed to fund. However, Mr.
29 Macaulay did not calculate the actual market value of LID properties in October 2019 and
30 did not separately analyze the hypothetical increase to property values attributable to
31 WSDOT's planned improvements. *See* 6/23/2020 Hrg. Tr. at 41:11-18 (did not estimate a
32 current value and then separately calculate a hypothetical "With WSDOT" Before value);
33 *see also* Gibbons Decl. ISO Closing Stmt., ¶ 8 (dated 7/7/2020); *see also* Gibbons 1/30/2020
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 Letter (attached to Appeal Petition) at 4; Gibbons 5/2/2018 Letter (attached to Appeal
2
3 Petition) at 3-4. Without any documented basis or support, Mr. Macaulay simply “ma[de] a
4
5 judgment a call” on what occupancy and rates would have been for the commercial
6
7 properties assuming all of the WSDOT Improvements are completed as of 2019. Macaulay
8
9 Depo. at 129:19-130:11. This outright omission precludes any independent evaluation of the
10
11 true market “Before” values. See 6/23/2020 Hrg. Tr. at 44:25-45:9. It also fails to meet
12
13 professional appraisal standards; if an appraiser uses current sales data to infer values, then
14
15 the appraiser must explain how he analyzed that data and other information to come up with
16
17 the hypothetical value. 3/3/2020 (A. Gibbons) Hrg. Tr. at 128:1-130:4. This includes not
18
19 just removal of the viaduct, but also other road, pedestrian and landscaping improvements
20
21 WSDOT had already committed to make.

22
23 34. However, because Mr. Macaulay testified that he did include some WSDOT-
24
25 related value-lift in the “Before” values, it follows that part of the special assessment
26
27 improperly is based on value attributable to the WSDOT Improvements. As shown by
28
29 mathematical formulas in his spreadsheets, Mr. Macaulay applies a special benefit
30
31 percentage to Before values. So, for example, if Mr. Macaulay believed the WSDOT
32
33 Improvements would add \$10,000,000 in value, then his method of analysis assuming a 3%
34
35 special benefit assignment would result in \$300,000 of over-assessment. See Gibbons Decl.
36
37 ISO Closing Stmt., ¶ 9 (dated 7/7/2020). At a minimum, the Final Study should be redone
38
39 to properly exclude the value of Before Improvements from the assessments. For these
40
41 reasons, Taxpayer appeals the following portions of the Examiner’s Recommendation:
42
43 Sections II.19, II.29, and IV.B.11(a)(ii)

44
45 35. Special benefits were assigned rather than measured. Mr. Macaulay
46
47 arbitrarily “assigns” special benefits to Before values instead of measuring them for each

1 property. *See* 1/30/2020 Gibbons Letter (attached to Appeal Petition); 3/5/2020 (B.
2 O'Connor) Hrg. Tr. at 147:10-149:21; 3/3/2020 (A. Gibbons) Hrg Tr. at 88:25-89:3; 90:8-
3 91:13. Based on formulas in spreadsheets that Mr. Macaulay used to analyze the
4 commercial properties, Taxpayer's experts concluded that Mr. Macaulay based adjustments
5 on hypothesized very small increases to property revenue and very small reductions to cap
6 rates to "calculate" an "After" value due to the coming 2024 LID Improvements.
7 Attachment B (ABS Spreadsheet). These series of micro adjustments were based on
8 "professional judgment" that are neither shown nor replicable.
9

10
11
12
13
14
15
16
17 36. For these reasons, Taxpayer appeals the following portions of the Examiner's
18 Recommendation: Sections II.19, and IV.B.11(a)(iii).
19

20
21 37. Special benefit falls within margin of error. The Final Special Benefit Study
22 applies an estimated value enhancement of less than 4%, which is generally within the
23 margin of error for appraisals and, therefore, not a reliable difference. *See Bellevue Plaza,*
24 *Inc.*, 121 Wn.2d at 401 (must substantiate use of percentages when allocating assessments).
25 Taxpayer's experts explained that if two appraisers independently arrive at values within 5%
26 of one another, this difference is considered reasonable as it falls within the standard margin
27 of error accepted in the profession. 3/3/2020 (A. Gibbons) Hrg. Tr. at 164:2-9; 3/5/2020 (B.
28 O'Connor) Hrg. Tr. 201:7-204:8. Because Mr. Macaulay's micro-special benefit percentages
29 fall far below that 5% margin, "there is no way of authenticating" such incremental changes
30 because "[m]arket forces completely obliterate any tiny little noise factor like that." *See*
31 3/3/2020 (A. Gibbons) Hrg. Tr. at 160:23-161:5. Mr. Macaulay agreed during his deposition
32 that 0.25% is too small to measure. Macaulay Depo. at 25:17-25. Additionally, the fact that
33 "Before" values are also based on a hypothetical that adds some unstated incremental value
34 to actual 2019 values exacerbates this issue—the ability for an appraiser to discern the
35
36
37
38
39
40
41
42
43
44
45
46
47

1 micro-value differences between hypothetical conditions that are so similar (the WSDOT
2 improvements compared to the LID improvements) “verges on being ludicrous.” 3/3/2020
3 (A. Gibbons) Hrg. Tr. at 89:4-90:7.
4

5
6 38. Even if it were possible to accurately tease out such a miniscule hypothetical
7 value change due to improvements coming five years later, experts testified that there is no
8 data to justify the mathematical adjustments—they are just the appraiser’s guesses as to
9 what he felt the changes (hypothetically) would be. *See* 3/3/2020 (A Gibbons) Hrg. Tr. at
10 88:21-88:24 (“you cannot measure one percent difference in a high-rise building for this
11 kind of a medium ... it’s simply assigned to a before value”). For these reasons, Taxpayer
12 appeals the following portions of the Examiner’s Recommendation: II.27 and IV.B.4.
13
14

15 39. No analysis of value increase attributable to individual components of the
16 LID Improvements. The Final Special Benefit Study lacks clarity to fairly estimate a small
17 percentage difference between hypothetical Before and After conditions. Throughout his
18 testimony, Mr. Macaulay could not explain what benefit arose from specific Before/After
19 descriptions in the Addenda even though he testified that he relied on these to calculate
20 special benefits. 6/23/2020 Hrg. Tr. at 26:21-30:10. When asked where in his report
21 someone might be able to determine how he attributed value to After conditions described in
22 the Addenda, he answered that that was “not the scope of the assignment” because he was
23 asked to look at all of the projects as a whole. 6/23/2020 Hrg. Tr. at 30:3-8. But he admitted
24 that the six components were not actually a continuous project, that he was viewing them
25 together because the City asked him to, and that if he were to view them independently,
26 there was a low probability that properties in the north would specially benefit from
27 improvements in the south and vice versa. *See* 6/25/2020 Hrg. Tr. at 27:18-28:5.

47

1 40. Not only did he fail to analyze benefits from each of these non-contiguous
2 improvements, his familiarity with descriptions as whole was tenuous at best. *See, e.g.*,
3 6/23/2020 Hrg. Tr. at 26:21-30:10 (Mr. Macaulay could not explain what specific benefit
4 arose from specific Before/After descriptions in the Addenda); *cf. Anderson v. City of*
5 *Issaquah*, 70 Wn. App. 64, 851 P.2d 744 (deprivation of due process where building design
6 objectives that guided regulators' assessment of architectural plans for buildings along a
7 "signature street" were so vague that they amounted to ad hoc review based on the
8 regulators' subjective impressions and feelings).⁶ It became clear through his testimony that
9 even though he used the renderings as "visual aid[s] in appraising the property in the before
10 and after" to "visually see what the differences would be," he could not explain what
11 specific elements in the visuals added or reduced value. *Id.* at 36:3-39:12. For example,
12 when shown a rendering of a two-lane road going down to one-lane in the After condition
13 near the Pike Street Market, he dismissively reasoned there would be no potential impact on
14 traffic because cars could still technically get through. *Id.* at 171:11- 173:11. When shown a
15 rendering of street improvements on Pike/Pine, he posited absurdly that seasonal variation
16 could explain the depiction of the same trees in the After condition nearly twice as tall as in
17 the Before. *Id.* at 173:17-175:4. For these reasons, Taxpayer appeals the following portions
18 of the Examiner's Recommendation: II.27 and IV.B.4.

36
37
38
39
40

41 ⁶ As an aside, this admission suggests that there should have been an explicit City Council
42 finding that properties within the LID would benefit from the improvements as a whole. *See* RCW
43 35.43.050. Without this finding, the cost and expense of each component must "be ascertained
44 separately, as near as may be, and the assessment rates shall be computed on the basis of the cost and
45 expense of each unit." *Id.* In other words, Mr. Macaulay should have estimated the benefit to each
46 property from each component separately, consistent with the law and in recognition of his testimony
47 that not all properties benefit from all components.

1 41. Special assessment is not supported by comparable studies, data or reports.
2
3 Mr. Macaulay's references to empirical research do not justify his fundamental assumption
4 that the LID Improvements will lead to meaningfully increased real estate values for
5 Taxpayer. Indeed, no City witness was able to explain how ABS Valuation used
6
7 comparable sales or information from the "over twenty-five studies and reports" to arrive at
8
9 very precise special benefit increases for residential and commercial combined properties,
10
11 including Taxpayer's property. For example, although Mr. Macaulay stated that no single
12
13 report or study was directly on point due to the unique nature of the LID Improvements (*see*,
14
15 *e.g.*, 6/25/2020 Hrg. Tr. at 146:21-147:8), he could not explain how he made specific
16
17 adjustments in his parcel-by-parcel analysis other than to say that the studies generally
18
19 provided "some background to base decisions on." *See* 6/23/2020 Hrg. Tr. at 161:5-162:12;
20
21 *see also* 6/26/2020 Hrg Tr. at 118:7-19 (did not make any specific adjustments to account
22
23 for similarities and differences between these improvements and the comparable parks he
24
25 looked at).
26
27

28 42. Mr. Macaulay purports to rely on Dr. Crompton's research to justify the
29
30 assignment of incremental increase of 0.5% to 4% to property values within the LID.
31
32 However, among other critiques, Dr. Crompton testified that Mr. Macaulay's reliance on his
33
34 research misinterprets his work in critical ways, including because the LID Improvements
35
36 manifest the characteristics of a parkway (not a park), and his research indicates that most of
37
38 a *park's* impact on single-family home values occurs within a 500-foot range (or 1.5 blocks
39
40 in Seattle). *See* Hrg. Exhibit 94 (Crompton's report). Further, updated research shows park-
41
42 related value increases are in fact smaller; that estimated increases are "best guesses" rather
43
44 than predictions of property value increases in a particular city; and that percentages do not
45
46 account for diminishing returns after taking into account water views, which would be the
47

1 driving value enhancer. The latter is especially true in a city like Seattle where the sloping
2 topography grants most properties in downtown a water view.
3

4
5 43. Rather than addressing Dr. Crompton's critiques, Mr. Macaulay simply states
6 that this was just one source of information that was not entirely relevant because, among
7 other things, Dr. Crompton's research dealt with parks and not streetscapes. However, Dr.
8 Crompton's critiques were based on Mr. Macaulay's own testimony that the core "park"
9 improvements are the Promenade, Overlook Walk, and Pier 58. Macaulay Depo. at 178:15-
10 180:2 (explaining that for purposes of "drawing boundaries around a park" he was
11 considering only at Overlook Walk, Promenade, and Pier 58). Based on this testimony, Dr.
12 Crompton concluded that 500 feet via road from "park" improvements is just one or two
13 Seattle blocks and that Mr. Macaulay "inappropriately extend[ed] the LID impact
14 significantly beyond that which the park study indicated (even if it was legitimate to use the
15 park review's findings)." Hrg. Exhibit 94 (Crompton's Report) at 7. Indeed, the LID area
16 extends even past 2,000 feet from the core "park" improvements, which is the outer limit of
17 impact applicable to "community parks"—which the LID Improvements are not. *Id.*
18 Taxpayer's property is not within 500 road network feet from the "park" improvements. *See*
19 Hrg. Exhibit 104 (Ellen Kersten Decl.) at Ex. E, F.
20
21

22
23 44. Further, Mr. Macaulay's testimony that he analyzed streetscapes, parkways,
24 greenways, and park-amenities separately contradicts his insistence that he viewed all of the
25 six LID components together as one entity. *See* 6/23/2020 Hrg. Tr. at 167:15-180:16. And
26 based on the attention given to Dr. Crompton's work in the Final Study and supporting
27 materials, it was clearly an important—if not *the* most important—source of information for
28
29

1 estimating special benefits (especially with respect to the condos).⁷ No City witness
2 adequately explained exactly how Dr. Crompton's research informed ABS Valuation's
3 parcel-by-parcel analysis.
4

5
6 45. The destination parks discussed in the Final Special Benefit Study do not
7 provide reliable, comparable, and valid support for the calculation of special assessments
8 here. *See* Gibbons 5/2/2018 Letter at 4. None of the parks cited in the Final Special Benefit
9 Study were funded by a LID. And in virtually all of those cases, the park improvements
10 dramatically restored unimproved or blighted areas, and properties evaluated were within
11 two or three blocks of the park.
12

13
14 46. ABS's claimed reliance on three economic studies to support property value
15 increase is also flawed. The HR&A study does not inform what value increases are
16 expected from the LID Improvements because it projects increases to tourism from *all* of the
17 Waterfront Projects (not just those funded by the LID) and is based on tourism data from
18 dissimilar parks in other cities,⁸ making the methodological application to the LID
19 speculative. Further, Mr. Macaulay appears to have selectively ignored the HR&A Study's
20 conclusion that there would be *no new net visitors* from downtown residents as a result of
21 the LID Improvements and could not explain how this impacted his condo analysis.
22

33
34
35

36
37 ⁷ Of the 62 files in Mr. Macaulay's "2019 Report Info" folder, which he explained contains all of
38 the studies he relied on to prepare the Final Study (*see* Hrg. Exhibit 122 at ¶ 12; 6/23/2020 Hrg. Tr.
39 at 152:10-154:18), 10 are authored by Dr. Crompton and 9 cite Dr. Crompton. Further, it appears
40 Dr. Crompton's study is the only one that found property value increases up to 2,000 feet from a
41 park (or streetscape) improvement—other studies estimated premiums for real estate only much
42 closer or cited to Dr. Crompton.

43 ⁸ These included distinct destination parks like Golden Gate Park, Hudson River Park, Rose
44 Kennedy Greenway, and Millennium Park where tourist "capture rates" varied from 5% (Rose
45 Kennedy Greenway in Boston) to 44% (Golden Gate Park in San Francisco). Further, the calculated
46 expected tourists visiting the LID park was calculated using data from only from New York City, a
47 notorious tourist destination.

1 6/25/2020 Hrg. Tr. at 152:15-153:21. The Texas A & M study on “The Impact of Parks on
2 Property Values” primarily focused on whether the benefits accrue to the larger community
3 rather than properties adjacent to the park. And the 2014 New York City Department of
4 Transportation study is not based on real estate transactions and market sales and fails to
5 substantiate any link between increased retail sales and property values. Moreover, this
6 study only looked at impact either directly abutting the streetscape improvement, or a couple
7 hundred feet for plaza-like improvements.
8

9
10 47. Meanwhile, Mr. Macaulay decided not to include the Trust for Public Lands
11 (TPL) Study in the Final Report even though it is Seattle-specific. *Id.* at 171:21-17; Hrg.
12 Exhibit 124. One explanation of that this omission could be TPL’s estimate of the economic
13 impact of the *whole park system* on the Seattle economy is much lower—\$30 million as
14 compared with HR&A’s estimate of \$191 million for just the waterfront improvements, and
15 thus would counsel a much lower assessment. Hrg. Exhibit 124 at 3. Regardless, when
16 asked whether he considered that HR&A’s estimated LID impact is six times greater than
17 TPL’s assessment of Seattle’s entire park system, his surmised that it was because the
18 HR&A Study came out in 2019, whereas the TPL Study came out in 2011. *See* 6/23/2020
19 Hrg. Tr. at 172:19-173:10. But, he did not do any additional analysis and did not adjust his
20 assumptions to account for this difference, which may be partly explained by the fact that
21 the TPL study is Seattle-specific. *Id.* at 173:11-174:1. The TPL Study also estimated that
22 approximately 3.44% of King County tourists visit Seattle primarily because of the city
23 parks, whereas HR&A estimated that 55% of visitors would visit primarily because of the
24 waterfront improvements.
25

26
27 48. Although proximity to the improvements is a key factor in all of these
28 studies, Mr. Macaulay could not explain in what circumstances he measured distance as the
29
30
31
32
33
34
35
36
37
38

1 crow flies or via travel routes. *See* 6/23/2020 Hrg. Tr. at 180:17-182:19. And he seemed to
2 not understand that for both the Trust for Public Lands study and Dr. Crompton's study,
3
4 benefits extending out 2,000 feet were only observed for community parks that exceeded 40
5
6 acres. *See* 6/25/2020 Hrg. Tr. at 145:2-21. By contrast, the total size of the LID
7
8 Improvements is approximate 20 acres and it is not a community park.⁹
9

10
11 49. There is no explanation in the Final Study or the supporting materials of how
12 the studies or comparable sales were used to derive values for Taxpayer's property. For
13 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
14
15 Sections II.18, II.20, II.21, II.22, II.23, II.24, II.26, II.30, II.32, and IV.C.5.
16
17

18
19 50. Failure to comply with USPAP. Taxpayer's assessment also rests on a
20 fundamentally wrong basis due to the City's appraiser's decision to utilize a hybrid mass-
21 appraisal method. Randall Scott, a former mass appraiser responsible (and professionally
22 recognized) for developing the MAI standards for mass appraisals, testified that the Final
23 Study does not meet mass appraisal standards nor allow for independent assessment of the
24 accuracy of Mr. Macauley's conclusions.
25
26
27
28
29

30
31 51. Specifically, because the parcel-by-parcel approach is not a mass appraisal,
32 Mr. Macaulay was required to comply with USPAP Standards 1 and 2 which govern direct
33 appraisals. *See* Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020). However,
34 the Final Study does not purport to comply with Standards 1 and 2. And Mr. Macaulay's
35 testimony suggests that he incorrectly believed that the only difference between direct
36 appraisals and mass appraisals is the reporting. *See* 6/23/2020 Hrg. Tr. at 207:7-208:12;
37
38
39
40
41
42
43

44 ⁹ *See*
45 [https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf)
46 [Qs_Final.pdf](https://waterfrontseattle.blob.core.windows.net/media/Default/pdf/2019_0208_Waterfront_LID_FA_Qs_Final.pdf) ("Waterfront Seattle will create about 20 acres of improved parks and public spaces
47 connecting Seattle's central waterfront to downtown.").

1 6/25/2020 Hrg. Tr. at 140:23-141:7 (explaining that he does not have to comply with
2 USPAP Standards 1 and 2 because he has not written an actual report on any condo unit); *id.*
3 at 205:8-14 (explaining that his mass appraisal simply uses “limited techniques, such as
4 Gordon uses in doing his limited restricted report”).
5
6
7

8
9 52. But the difference is not only in reporting—mass appraisal techniques must
10 instead comply with substantive standards in USPAP Standards 5 and 6. For example, as
11 Paul Bird (City’s witness) testified, the mass appraisal approach is distinct from a parcel-by-
12 parcel approach:
13
14
15

16 The mass appraisal technique is an appraisal method used to evaluate
17 a group of properties that are subject to similar market forces as of a
18 certain date through the use of market data, statistical analysis and
19 testing. As a result, the mass appraisal technique does not require or
20 involve analysis of each individual property’s specific data.
21
22

23 Second Decl. of Paul Bird ¶ 20 (dated 6/26/2020).
24
25

26 53. Indeed, USPAP’s definition for “mass appraisal” is “the process of valuing a
27 universe of properties as a given date using standard methodology, employing common data,
28 and allowing for statistical testing.” Appraisal Foundation, Uniform Standards of
29 Professional Appraisal Practice at 5 (2020-2021). And the definition for “mass appraisal
30 model” is “a mathematical expression of how supply and demand factors interact in a
31 market.” *Id.* Mr. Scott explains that a mass appraisal must use a model that is suitable for
32 statistical testing—otherwise, there would be no way to assess the accuracy or validity of the
33 mass appraisal. R. Scott Decl. ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
34
35
36
37
38
39
40
41

42 54. Regardless of client direction, Mr. Macaulay is required to comply with
43 USPAP. So, if, as he determined, a “[p]arcel-by-parcel direct appraisal” would not have
44 been economically feasible because it would have taken “an incredible amount of time and
45
46
47

1 cost” (6/18/2020 Hrg. Tr. at 125:15-10), then ABS Valuation should have conducted an
2 appraisal consistent with USPAP Standards 5 and 6. *See also* Hamel Decl. at ¶ 8
3 (“performing an individual appraisal of each [condo] parcel would have been cost and time
4 prohibitive”).
5
6
7

8
9 55. But Mr. Macaulay’s methods fail to comply with USPAP Standards 5 and 6
10 because, *inter alia*, he fails to develop a model structure that reflects characteristics affecting
11 value, fails to calibrate the model structure to determine the contribution of the individual
12 characteristics affecting value, and does not review the mass appraisal results against actual
13 sales/data as a quality assurance/quality control check. *See* 3/3/2020 Hrg. Tr. at 216:18-
14 217:1;¹⁰ Decl. of Randall Scott ISO Closing Stmt., ¶ 4 (dated 7/7/2020).
15
16
17
18
19

20
21 56. Mr. Macaulay explained that factors like “aesthetic change in the area, the
22 proximity to the elements, the increase in market rent, market vacancy changes,
23 capitalization rate changes, and things of that nature” drove value increases. 6/23/2020 Hrg.
24 Tr. at 211:14-212:3. But he could not specify how these factors were considered in his
25 “parcel-by-parcel” approach, and no one reviewing his work would have a clue. And he did
26 not calibrate his approach to determine how each factor contributes to value. *Id.* at 212:8-
27
28
29
30
31
32
33

34
35 ¹⁰ Standard 5 requires mass appraisals to develop a model structure that conceptualizes the
36 relationship between characteristics that affect value, and to calibrate that model to specify how
37 individual characteristics affect value. *See* USPAP Standard 5: Mass Appraisal, Development (2020-
38 21). The purpose is to rationally determine what characteristics will create value, and by how much.
39 This allows the mass appraiser to not only generate outputs, but also to test the reliability of the
40 model (and allow others to do so) by comparing the results of the model with actual sales. *See*
41 3/3/2020 (R. Scott) Hrg. Tr. at 197:7-15; 203:21-205:13 (explaining that it is typical to test output
42 against actual sales). USPAP Standard 6 sets forth the mass appraisal reporting requirements, which
43 include explanation of the model specification, data requirements, calibration methods, and
44 mathematical form of the final model. *See* USPAP Standard 6: Mass Appraisal, Reporting at 6-2(i)-
45 (o). Without this reporting, it is impossible for users of the appraisal report to determine how the
46 appraiser determined value, and this omission renders the report not credible. *See* 3/3/2020 (R. Scott)
47 Hrg. Tr. at 206:15-207:17.

1 213:5. As for reviewing the mass appraisal results, there were no criteria governing the
2 internal review process. *Id.* at 104:24-105:20. And because both the Before and After values
3 were hypothetical, it was not possible to identify matched pair sales and no City witness
4 explained how ABS Valuation made adjustments to “comparable” sales in order to check
5 their conclusions. Finally, Mr. Macaulay failed to comply with Standard 6 which requires
6 him to explain his model structure.
7
8
9
10
11

12 57. For these reasons, Taxpayer appeals the following portions of the Examiner’s
13 Recommendation: Sections II.28, II.31 and IV.C.8. In addition, Taxpayer renews Objectors’
14 Motion To Exclude The Expert Testimony of Robert J. Macaulay, filed on April 8, 2020,
15 and appeals the Examiner’s denial of that motion.
16
17
18
19
20

21 58. Finally, Taxpayer’s property is not appurtenant—or even in close
22 proximity—to any proposed improvements. *See Hasit*, 179 Wn. App. at 947 (“the burden of
23 proving special benefit” shifted to the City because the protestors’ parcels merely stood “in
24 close proximity to the property on which expert testimony was given”). Indeed, Taxpayer’s
25 property is not even within 500 road network feet from the core park improvements. And,
26 as described above, the special assessment is overstated because the Final Study makes no
27 attempt to determine general benefits, existing amenities for Taxpayer’s specific property, or
28 special detriments. In addition, it is speculative due to the fact that, as of October 2019,
29 improvements were not in place—and, in fact, much of the waterfront is a construction
30 zone following removal of the viaduct and now Pier 58 demolition. Under these
31 circumstances, rather than relying on entirely imaginary income and shaky hypotheticals,
32 Mr. Macaulay at the very least should have discounted the special benefit estimates or
33 waited to perform the Study until the improvements were at least close to complete.
34
35
36
37
38
39
40
41
42
43
44
45
46
47

Erroneous Pre-Improvement Valuation

59. The proposed final assessment erroneously overstates the pre-improvement value of Taxpayer's property as of October 1, 2019 and, as a result, overstates the special benefit to the Taxpayer's property.

60. The City's Final Study was used to compute the proposed final assessment of Helios' property. The City's Study purportedly uses data from the King County Department of Assessments,¹¹ but the pre-improvement valuation information in the Final Study does not accurately reflect this data. For example, the City's Study values Helios' property at \$298,884,000.00 as of October 1, 2019. However, the King County assessor determined the true and fair value of the property to be \$255,000,000.00, valued in 2019 for tax year 2020. In other words, the Final Special Benefit Study's valuation is 117.2% of King County's assessed value. The Final Special Benefit Study does not explain this difference—or any differences—between its pre-improvement valuation and its supposed source for market data. For this reason, Taxpayer appeals Section IV.C.11 of the Examiner's Recommendation.

61. Further, the City's analysis was based on unreliable market data. The ABS appraisal overstated the before market value by about \$59 million. B. O'Connor's Jan. 31, 2020 Report (attached to Appeal Petition), Ex. 6. Based on our expert appraiser's appraisal review, the true and fair value of the Helios as of October 1, 2019 was \$239,884,000. *Id.* Additionally, for Helios, Mr. Macaulay undercounted the number of studios as compared with larger units, which resulted in a substantially inflated "Before" value. See 3/11/2020 (B. Scott) Hrg. Tr.) at 22:24-23:18; see also B. Scott's Supplemental Report for Helios

¹¹ See, e.g., Final Special Benefit Study, "All Other LID Commercial Properties" Spreadsheet (providing a "County Link" to the King County Department of Assessment's online "eReal Property" search tool).

1 (using the correct data would have reduced “Before” value by \$37,849,000). Additionally,
2
3 Mr. Scott presented testimony that Mr. Macaulay incorrectly reduced the number of studios
4
5 by 56 and increased the number of larger, higher rent units in his income calculation, which
6
7 erroneously increased the property value and LID assessment. *See* 3/11/2020 Hrg. Tr. at
8
9 22:21-24:17. The City only responded to the unit mix error by claiming that if this
10
11 undercount in accurate, Mr. Macaulay will need to complete re-assessment of the Helios.
12
13 *See* 6/23/2020 Hrg. Tr. at 56:21-57:8. The Examiner Recommendation failed to make a
14
15 finding to address this error.

16
17 62. Thus, aside from multiple other reasons why computation of the special
18
19 benefits was flawed (discussed further below), the assessment is based incorrectly on pre-
20
21 improvement values that do not accurately reflect market data. For these reasons, Taxpayer
22
23 appeals the following portions of the Examiner’s Recommendation: Sections II.13, II.14,
24
25 and II.15.

26 27 **Erroneous Computation of Special Benefit**

28
29 63. “Special benefit” is “the increase in fair market value attributable to the local
30
31 improvements.” *Doolittle*, 114 Wn.2d at 103. “A benefit that a particular piece of property
32
33 may receive by reason of the improvement is not measured alone by the physical character
34
35 or cost of that portion of the improvement upon which the property abuts. *La Franchi v. City*
36
37 *of Seattle*, 78 Wash. 158, 165, 138 P. 659, 662 (1914). “The question is: To what extent is
38
39 the particular tract or property benefited by the entire improvement, and is it assessed
40
41 proportionately with the other property included within the assessment district?” *Id.* 165–
42
43 66.

44
45 64. The proposed final assessment erroneously overstates the special benefit of
46
47 LID improvements in a number of ways.

1 65. Spreadsheets show arbitrary changes to revenue and capitalization rates. For
2 the Helios, Mr. Macaulay assumed room/rental rates would increase by 1.75% (low) and
3 2.25% (high) due to the 2024 LID Improvements. Mr. Macaulay then uses these same
4 percentages (1.75% and 2.25%) to increase retail and parking. He then uses this
5 hypothesized increased revenue to calculate a new net operating income for the commercial
6 properties and capitalizes that to come up with an “After” valuation.
7
8
9

10
11 66. For changes to capitalization rate (“cap rate”), Mr. Macaulay assumes the net
12 operating income remains the same as in the hypothetical “Before” condition but changes
13 the cap rate. For the Helios, the cap rate goes from 4.05% to 3.95% (low scenario, creating
14 a bigger value increase) and 3.99% (high scenario, creating a lower value increase).
15
16
17
18
19

20 67. Mr. Macaulay then averages his four “After” values to arrive at a final special
21 benefit conclusion. For the Helios, this is an increase in property value of 1.92% due to the
22 LID Improvements.
23
24
25

26 68. Mr. Macaulay offered little justification for his micro adjustments to revenue
27 and capitalization rates. When asked precisely what the basis is for his special benefit
28 percentage increases to revenue for each commercial property, he could not point to
29 anything specific other than his judgment. 6/23/2020 Hrg. Tr. at 113:24-115:24. There also
30 is nothing in the report to allow a reader to understand how he came up with these
31 percentages. *Id.* at 112:24-113:3. And there is no model or equation that he relied on—
32 again, just his “judgment.” *Id.* at 113:4-6. Although he claims that the spreadsheets explain
33 the basis for his belief that certain factors—liked increased connectivity—will increase
34 property values (*id.* at 50:7-25), he could not explain how he went from general principles to
35 very specific percentage adjustments to revenue and capitalize rate. *Id.* at 115:10-24. And
36 for the first two “Scenarios” in the spreadsheet, he applied percentage changes to all revenue
37
38
39
40
41
42
43
44
45
46
47

1 sources equally even though there was no separate analysis done for food and beverage or
2 parking. *Id.* at 116:14-25, 117:11-21. Thus, he has not rebutted Taxpayer's expert's
3 conclusion that the adjustments are arbitrary and fall below generally accepted margins of
4 error, and that there is no actual, measurable, non-speculative special benefit to Taxpayer's
5 properties.
6
7
8
9

10 69. Mr. Macaulay testified that he used comparable sales as a reasonableness
11 check for commercial properties. But as explained above, no City witness has explained
12 how anyone, or all, of the sales are comparable to any particular commercial property within
13 the LID. *Compare Bellevue Plaza*, 121 Wn.2d at 406. Further, Mr. Macaulay testifies that
14 in order to make sales "comparable," he would have had to make adjustments to account for
15 Before and After conditions, but there is no way to understand how adjustments were made
16 because he "didn't do a separate sales comparison approach where we showed adjustments
17 and whatnot." 6/23/2020 Hrg. Tr. at 128:25-129:24. When asked how he determined that
18 his adjustments were reliable, he said it would have simply been a "test of reasonableness."
19 *Id.* at 127:10-128:24.
20
21
22
23
24
25
26
27
28
29

30 70. It also bears noting that any "internal review" of the special benefit estimates
31 would have been largely arbitrary given Mr. Macaulay's testimony that there is no margin of
32 error. Indeed, given all the same information, he seemed to suggest that it would be
33 perfectly reasonable for another experienced appraiser to come up with special benefit
34 estimates that were five times higher than his estimates. 6/23/2020 Hrg. Tr. at 93:2-12; *see*
35 *also id.* at 89:20-90:2 (testifying that it might be reasonable for two appraisers with the exact
36 same quality of data to be 50% off). Ultimately, his repeated insistence that there is no
37 margin of error conflicts with the testimony of Taxpayer's experts and reaffirms that there
38 are absolutely no standards governing his process. *See id.* at 91:6-94:5. Even if the typical
39
40
41
42
43
44
45
46
47

margin of error (5%) is a “rule of thumb” and not a “hard legal standard,” there are still reasonable and unreasonable variations within the appraisal field. *See* Examiner’s Recommendation at IV.B.4. Thus, the special assessment is not actual, measurable or special because it is arbitrarily assigned; and it is too small to realistically be supported by appraisal techniques.

71. No evidence of special benefit. Meanwhile, there is “no actual evidence from any seller or purchaser that the price was higher because of the LID improvements.” *Bellevue Plaza, Inc.*, 121 Wn.2d at 409. As in *Bellevue Plaza*, the City’s appraiser “has not identified any seller or buyer, or any particular property where the existence of the LID improvements had an effect on the market price.” *Id.* at 410-11. Meanwhile, Taxpayer has explained that the property has not increased rental rates or revenue due to the forthcoming LID Improvements, because, among other reasons (and apart from COVID), the improvements ABS believes will generate value do not exist and will not for a number of years to come. There are no comparable sales because the LID Improvements are not in place, nor will they be until the end of 2024 if completed on schedule.

72. The fair market value of Helios’ property has not changed due to increased waterfront view. *Cf. Appeals of Jones*, 52 Wn.2d 143 (property was not specially benefited from installation of new water main and fire hydrant where it was already adequately supplied with water and afforded adequate fire protection). And in any event, any value attributable to removal of the viaduct was to be excluded from the assessment calculation.

73. There is no special benefit to Helios because its apartment demand is driven by proximity to downtown job centers, and the average short tenancies means that the building tenants will likely turnover completely before LID improvements are delivered, providing no market justification for increased rents. In fact, the LID improvements

1 diminish the value of Helios property by drawing visitors away towards improvements that
2 do not abut the property and increasing competition in other areas of the city. *See Kuskys*, 85
3 Wn. App. 493 (testimony of owners' expert that LID actually diminished value of property
4 was sufficient to rebut presumption that assessment was proper). The ground floor retail
5 tenants will also suffer from a decrease in foot traffic, which will be pulled toward the
6 improved amenities around Pike Place Market. Mr. Macaulay did not account for any of
7 these impacts.
8

9
10
11
12
13
14
15 74. Moreover, the assessment formula is an attempt to distribute costs that do not
16 relate to special benefits. *See Bellevue Plaza, Inc.*, 121 Wn.2d at 416 (model cannot be
17 "merely a mathematical model that distributes costs").
18

19
20
21 75. The Special Benefit Study fails to address whether the \$346,000,000
22 estimated LID project cost takes into account the investment that would have occurred in the
23 LID area anyway. Furthermore, there is no spatial presentation concerning where dollars are
24 invested. This is a critical component of estimating which properties receive a direct benefit
25 from the improvements, versus more incidental benefits further from the park.
26

27
28
29
30
31 76. Mr. Macaulay also included personal property in his valuation of hotels even
32 though none of the assessment notices were for personal property (*see* Hrg. Exhibit 130) and
33 he did not include personal property values for any other types of property. 6/23/2020 Hrg.
34 Tr. at 62:5-11. This is contrary to an explicit disclosure in the Final Study stating that the
35 "[a]ppraisal applies to the land and building improvements only" (C-17 at 197). *See also*
36 Gibbons Decl. ISO Closing Stmt., ¶ 10 (dated 7/7/2020). This also resulted in hotels
37 receiving a disproportionately high LID assessment in comparison to other property types,
38 since hotels were the only property type subject to personal property LID assessments.
39
40
41
42
43
44
45
46
47 Fourth Decl. of Gordon ISO Closing Stmt., ¶ 11 (dated 7/7/2020); Gibbons Decl. ISO

1 Closing Stmt., ¶ 10. Further, inclusion of personal property in hotel valuations violated
2 notice procedures because hotel property owners only received notice that their real estate
3 was being assessed. *See* Fourth Decl. of Gordon ISO Closing Stmt., ¶ 12 (dated 7/7/2020).
4

5
6 77. With seemingly no basis, Mr. Macaulay calculated special benefit to personal
7 property at the same rate as real property. 6/23/2020 Hrg. Tr. at 134:5-24. So, for example,
8 a television at the waterfront Marriott is assigned a greater special benefit than the same
9 television at the Hyatt Regency. *Id.* at 134:25-135. But it is simply wrong to assume that
10 furniture and equipment is instantly worth more at a hotel closer to the waterfront, and
11 unreasonable to assign a value lift to personal property that is replaceable at the same cost
12 and may be obsolete before the LID improvements are even completed. Further, personal
13 property is highly depreciable, and likely to be fully depreciated or potentially discarded by
14 2024. *Id.*; *see also* Gibbons Decl. ISO Closing Stmt., ¶ 10. Thus, the hotel valuations must
15 be redone to correct for this error.
16

17
18 78. The proposed final assessment substantially exceeds the special benefit to the
19 property and is grossly disproportionate to similarly situated properties within the LID. For
20 these reasons, Taxpayer appeals the following portions of the Examiner's Recommendation:
21 Sections II.22, II.23, II.27, IV.B.4, and IV.B.11(a)(iii).
22

23 **State Environmental Policy Act and Other Environmental Permitting**

24
25 79. While this appeal is not challenging the City's environmental review and
26 permitting processes, those processes are relevant in determining the legality of the
27 assessments, and to assessing the delivery risk, the present value of the City's plans, and
28 ultimately the amount of the assessment. If the roll is finalized, the City will commit to
29 pursue projects that have not yet undergone environmental review (thus limiting the choice
30 of reasonable alternatives to those projects). For example, if the roll is finalized, the City is
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47

1 committed to build all of LID Improvements, even though NEPA review of Pier 58 (and 63)
2 is just beginning. Further, the City has segmented environmental review, and still has a
3 gauntlet of federal, state and tribal review processes to complete before it will be clear what
4 the City can legally build, and when. *See Summary and Fiscal Note*, Sea. City Council Bill
5 No. 119447 at 3 (Jan. 28, 2019); *see also* SMC 25.05.070(A), SMC 25.05.440(D)(2)(b),
6 SMC 25.05.406 and their counterparts in the SEPA Rules, Chapter 197-11 WAC. Either the
7 City is violating SEPA and chapter 25.05 SMC by finalizing the assessment roll and
8 committing to reconstruction of Pier 58 and major street improvements without
9 environmental review, or the City's Final Special Study has improperly included and is
10 proposing to assess the Taxpayer the costs and special benefits of improvements that may
11 not get built. Either way, it is faulty process.

22 **Due Process Rights**

23
24 80. The City's failed to notify Helios sufficiently in advance of the hearing to
25 allow Helios to obtain evidence and prepare to properly challenge the assessments. Because
26 LID assessments involve a deprivation of property, affected owners have the right to a
27 hearing as to whether the improvement resulted (or will result) in special benefits to their
28 properties and whether their assessments are proportionate, which necessarily includes the
29 right to adequate notice of the hearing. *Carlisle v. Columbia Irrigation Dist.*, 168 Wn.2d
30 555, 569–70, 229 P.3d 761 (2010).

31
32 81. The LID statute specifies that cities must mail notices giving the time and
33 place of the hearing to the affected owners "[a]t least fifteen days before" the hearing and
34 publish the notice once a week for 2 consecutive weeks in the city's official newspaper, with
35 the final publication at least 15 days prior to the hearing. RCW 35.44.090. However, strict
36 compliance with the statute does not necessarily satisfy due process. *Hasit*, 179 Wn. App. at
37
38
39
40
41
42
43
44
45
46
47

1 956. The key inquiry is whether the owner had sufficient time to gather evidence (and
2 secure their own appraisal), evaluate proportionality of the proposed assessments, and
3 whether the owner asked for more time. *Id.* (noting that 15 days was entirely “insufficient
4 for anybody to get an appraisal”).
5
6

7
8 82. The City’s Notice of Assessment was sent on December 30, 2019. And the
9 Final Special Benefit Study has only been available for public review since January 7, 2020.
10 Due to this short time frame, Helios requested a prehearing conference and scheduling order
11 that would preserve and protect Helios’ right to analyze and respond to the Final Study,
12 obtain expert appraisal testimony, conduct depositions, and to accommodate preliminary
13 motions (*e.g.*, with respect to the interplay between SEPA and the City’s assessment of taxes
14 for Pier 58 and Pike/Pine improvements). The Hearing Examiner erroneously denied that
15 request. For this reason, Taxpayer appeals the following portions of the Examiner’s
16 Recommendation: I.B.
17
18
19
20
21
22
23
24
25

26 **VII. Relief Requested**

27 Helios respectfully requests that the City Council:
28

- 29 1. Reject the Hearing Examiner’s recommended denial of Taxpayer’s objection
30 and:
31
32 a. Cancel the Waterfront Local Improvement District No. 6751 proposed
33 final assessment dated December 20, 2019; or
34
35 b. Revise Taxpayer’s Waterfront Local Improvement District No. 6751
36 proposed final assessment to \$0 (zero), or such amount as Taxpayer
37 establishes at the hearing in this matter; or
38
39
40
41
42
43
44
45
46
47

- 1 c. Remand the matter to the Hearing Examiner or City appraiser to
2 recalculate and reduce Taxpayer's assessment using recognized
3 appraisal techniques consistent with USPAP and:
4
5
6 i. Excluding any property value increase attributable to viaduct
7 removal and other planned WSDOT Improvements;
8
9 ii. Taking into account the effects of COVID-19 pandemic on the
10 value of Taxpayers property and other relevant developments
11 since October 2019;
12
13 iii. Accounting for and excluding (1) any special benefits from
14 existing or planning improvements that already provide
15 similar benefits to Taxpayers property, and (2) any special
16 detriments from construction and other anticipated LID-
17 related disamenities;
18
19 iv. Accounting for and including only those actual benefits
20 anticipated to accrue to Taxpayer's property based on its
21 location relative to Pier 58, Overlook Walk, and the
22 Promenade, and specific elements of the LID Improvements;
23
24 v. Discounting anticipated special benefits to present value,
25 based on reliable estimates regarding when special benefits
26 will start accruing following completion of the LID
27 Improvements; and
28
29 vi. Accounting for such other issues specific to Taxpayer's
30 property relevant to calculation of such assessment; and
31
32
33
34
35
36
37
38
39
40
41
42
43
44
45
46
47 2. Grant such further relief as the City Council deems just and proper.

22 **III. Statement of Eqr-Second & Pine LLC's Interest and Incorporation of Prior**
23 **Arguments**

24
25 EQR-SECOND & PINE LLC owns the property that is subject to the proposed final
26
27 assessment described in Section IV.
28

29 Eqr-Second & Pine LLC is amending its appeal as authorized in City of Seattle
30
31 Resolution 31979 to include additional arguments relevant to the revised Final
32
33 Recommendations of the Hearing Examiner issued on February 1, 2021. On February 4,
34
35 2020, Eqr-Second & Pine LLC timely filed an objection to the assessment, which was based
36
37 on the Final Study. Eqr-Second & Pine LLC further timely filed an appeal of the Hearing
38
39 Examiner's 2020 recommendations to the City Council. Eqr-Second & Pine LLC maintains
40
41 and incorporates all objections and arguments raised in its appeal filed with the City Clerk
42
43 on September 22, 2020. This amendment is a supplement is to be read together with Eqr-
44
45 Second & Pine LLC's appeal filed on September 22, 2020. Eqr-Second & Pine LLC
46
47

1 incorporates by reference all filings, evidence, and pleadings filed by any party before the
2
3 Hearing Examiner as authorized by the Hearing Examiner, including without limitation all
4
5 records pertaining to the November 2020 through February 2021 remand hearing ordered by
6
7 Council.
8

9 **IV. Amended Arguments on Appeal**

10 EQR-SECOND & PINE LLC supplements its appeal of the Hearing Examiner's
11
12 recommendation to deny Eqr-Second & Pine LLC's objection to the City of Seattle's
13
14 Waterfront Local Improvement District No. 6751 proposed final assessment dated
15
16 December 30, 2019 against the following property:
17

18 King County Parcel No. 7683890010
19 Site Address: 206 Pine St., Seattle, Washington
20 Proposed Final LID Assessment for Parcel: \$2,244,356.42
21
22

23 To avoid repetition, Eqr-Second & Pine LLC incorporates the evidence and
24
25 arguments raised before the Hearing Examiner and before the City in its September 22, 2020
26
27 appeal, into this amended appeal.
28

29 **A. The Anticipated Special Benefits to Eqr-Second & Pine LLC's Property**
30 **should be Discounted to Present Value and Assessments Adjusted as**
31 **Appropriate**
32

33 On remand, the City's appraiser acknowledged that special benefits to parcels can be
34
35 reduced, even to zero, if those benefits accrue in the future. *See* Declaration of Robert
36
37 Macaulay at 20 (Dec. 4, 2020). For that reason, the City's appraiser recommended the
38
39 assessment on CWF-442 (the Act Theatre) be reduced to zero because a restriction prohibits
40
41 redevelopment of the theatre's condominium until 2035, and therefore, any special benefit to
42
43 the theatre parcel is too remoted to support a current assessment. *Id.* The Examiner
44
45 accepted that recommendation. The City's appraiser further acknowledged that benefit
46
47 reductions due to delays in delivery of benefits, e.g., to 2030 or 2025, could be determined

1 by discounting to present value. *Id.*; Macaulay Dep. at 51:16-17, 52:9-13 (Dec. 22, 2020)
2 (benefits to theatre “would be a long enough time out to where it wouldn’t measurably affect
3 value.”). Nevertheless, the appraiser refused to more generally discount his benefit
4 calculations to present value because the general benefits are not anticipated from the LID
5 improvements until after they are completed in 2024, 5 years after his 2019 assessment, and
6 perhaps not until 2029. The appraiser’s and Examiner’s recommendation to reduce the
7 theatre’s assessment to zero is reasonable. His refusal to make other discounts to his special
8 benefit calculation, and related assessments, to account for the delay between the assessment
9 and realization of any special benefits to Taxpayer’s property is unreasonable, contrary to
10 standard appraisal practice, and renders the other proposed Waterfront LID special
11 assessments, and the Examiner’s Recommendations, arbitrary and capricious and based on
12 “fundamentally wrong methods.”
13
14

15 All special benefit taxes assessed by a municipality must be based on “actual,
16 physical and material [special benefits that are] not merely speculative or conjectural.”
17 *Heavens v. King Cty. Rural Library Dist.*, 66 Wn. 2d 558, 563, 404 P.2d 453 (1965).
18 Additionally, the assessments may not materially exceed the actual special benefit conferred
19 by the LID Improvements. *Id.* Further, LID assessments must be proportionate. *Id.* Failure
20 to meet any of these legal requirements is fatal to the assessment. Taxpayer’s September 22,
21 2020 appeal challenged the City appraiser’s valuation because, among other flaws, it did not
22 discount benefits the City estimated would accrue to the properties from improvements to be
23 delivered sometime between 2024 and 2029 to present, 2019 value. Now, add to that the
24 appraiser’s inconsistent approach, selectively applying discounting to one (that we know of)
25 property while treating all or most others (including Taxpayer’s) differently, and
26 withholding any discount. This inconsistent treatment is both arbitrary and capricious and

47

1 disproportionate, where the appraiser has arbitrarily decided that no assessment is warranted
2 for some properties because the benefit are too distant, while assessing other properties as
3 though distant benefits have already been secured. As Taxpayer identified in its September
4 22, 2020 appeal, the City appraiser's own materials show that benefits for a project like this
5 may not accrue for at least five years after they are completed, in 2029. *See* Gibbons Decl.
6 ISO Closing Stmt., Ex. C at 24, 30-31 (dated 7/7/2020). The City Council should either
7 reject the improper calculation of the benefit or remand and require the appraiser to discount
8 the benefits to net present value.

15
16
17 **B. The City's Appraiser's Disregard of Data on Remand is Another**
18 **Example of How His Analysis is Unreliable, Not Admissible under Frye**
19 **or ER 702, and His Proposed Special Assessments are not based on**
20 **Actual, Measurable and Special Value Increases from the anticipated**
21 **LID Improvements.**
22

23 The City's appraiser was provided actual performance data for the remanded hotels,
24 including their average daily room rates, from which he had been instructed to "recalculate"
25 hotel "before" values on remand. *See* Hearing Examiner Initial Recommendation at p. 117
26 (Sept. 8, 2020). The appraiser refused, explaining that, had he done so, his before values
27 would be "too low." His remand analysis demonstrates that his whole "income approach to
28 valuation", used for both hotels and other commercial properties, like Taxpayer's, is
29 contrived speculation on speculation. The City's appraiser disregarded these hotels' actual
30 net income in a supposed "income analysis." *See e.g.*, Deposition of Robert J. Macaulay,
31 7:10-13 (December 22, 2020) (Attached as Exhibit A to Objector's Statement on Remand
32 for Case Nos. CWF-0318, 0413, 0415, 0417, 0418, 0423, 0429, 0436).

36
37
38
39
40
41

42 Taxpayer's appraiser submitted an appraisal which was similarly realistic and
43 specific to the property but was disregarded. Taxpayer's appraiser demonstrated the actual
44 value of the property is \$239,884,000, and the LID assessment should be reduced to reflect
45
46
47

1 this before-value. *See* CWF-0441 Statement of Objections, Exh. 6, Appraisal of Brian
2
3 O'Connor (Jan. 31, 2020).
4

5 **C. In Light of Covid's Continuing Impact on Eqr-Second & Pine LLC and**
6 **other Downtown Property Owners and other Material Changes Since**
7 **October 2019, the LID Should be Cancelled, or at Least Assessments**
8 **Recalculated, to take Into Account Property Value Reductions**
9

10 In Taxpayer's September 22, 2020 appeal, Taxpayer requested the Council "[t]ak[e]
11 into account the effects of the COVID-19 pandemic on the value of Taxpayer's property and
12 other relevant developments since October 2019." When Washington's first COVID
13 restrictions were imposed in March and April 2020, there was an assumption that they
14 would be short-lived. A year later, the Puget Sound area is finally again moving to "Phase
15 II." Many downtown hotels are closed, and our hotels are not anticipated to fully recover
16 for another 5 years. Retail stores are boarded up. Homelessness and related challenges have
17 gotten much worse. The City has already imposed higher minimum wages and taxes on
18 businesses to try to fund recovery. The West Seattle Bridge and other bridges are in
19 immediate need of repairs and maintenance. Pier 58, instead of the vibrant waterfront park
20 hypothesized in the City's appraisal to exist as of October 2019, collapsed, and is several
21 years from completion, as a best case. In current circumstances, a downtown tax to fund
22 new, non-essential park improvements against financially strapped taxpayers, and likely
23 passed through to financially strapped tenants and customers would be unfair to taxpayers
24 and a misallocation of city resources. COVID threw everyone for a loop. But as the City
25 rethinks its budget priorities for the next few years, and its potentially funding sources,
26 Taxpayer respectfully requests that the City dissolve the assessment, at least until it (and
27 property owners) have a chance to recover, and that any assessment take into account the
28 changed circumstances since this appeal process started on February 4, 2020 to avoid

1 unnecessarily and perhaps permanently killing downtown properties and businesses in the
2 name of bettering them.
3

4
5 **V. Relief Requested**

6 Particularly in light of the Committee's decision not to take further comment, Eqr-
7
8 Second & Pine LLC respectfully request that each Committee member carefully review the
9 record transmitted to Council before voting on our appeal.
10

11
12 EQR-SECOND & PINE LLC respectfully reiterates its request from the September
13 22, 2020 appeal that the City Council:
14

- 15 1. Cancel the Waterfront Local Improvement District No. 6751 proposed final
16 assessment dated December 30, 2019; or
17
- 18 2. Revise Taxpayer's Waterfront Local Improvement District No. 6751
19 proposed final assessment to \$0 (zero), or such amount as Taxpayer
20 establishes at the hearing in this matter; or
21
- 22 3. Grant the Examiner's recommended remand but with instructions to
23 recalculate and reduce Taxpayer's assessment using recognized appraisal
24 techniques consistent with USPAP and
25
26 a. Excluding any property value increase attributable to viaduct removal
27 and other planned WSDOT Improvements;
28
29 b. Taking into account the effects of the COVID-19 pandemic on the
30 value of Taxpayer's property and other relevant developments since
31 October 2019;
32
33 c. Accounting for and excluding (1) any special benefits from existing
34 or planned improvements that already provide similar benefits to

46
47

1 Taxpayer's property, and (2) any special detriments from construction
2 and other anticipated LID-related disamenities;
3

4
5 d. Accounting for and including only those actual benefits anticipated to
6 accrue to Taxpayer's property based on its location relative to Pier 58,
7 Overlook Walk, and the Promenade, and specific elements of the LID
8 Improvements;
9

10
11
12 e. Discounting anticipated special benefits to present value, based on
13 reliable estimates regarding when special benefits will start accruing
14 following completion of the LID Improvements; and
15

16
17 f. Accounting for such other issues specific to Taxpayer's property
18 relevant to calculation of such assessment; and
19

20
21
22 4. Grant such further relief as the City Council deems just and proper.
