Director's Rule

Title Stormwater Facility Credit Calculator		Number DWW-260.2	Rev. no. 3
Responsibility Drainage and Wastewater Line of Business		Supersedes N/A	Pages 2
General Manager/CEO signature  Andrew Lee (Dec 13, 2024 09:25 PST)	Approval date 12/13/2024	Effective date January 1, 2025	

A. PURPOSE

To improve the equity of drainage charges, Seattle Public Utilities (SPU) has developed a Stormwater Facility Credit Program. This program provides credits on drainage bills to customers who have installed approved stormwater management facilities that mitigate the impact on the City's drainage system of stormwater runoff from their property. Approved stormwater management facilities must meet applicable technical design requirements described in the City's Stormwater Code ("Stormwater Code") SMC 22.800.

B. BACKGROUND

The revised Stormwater Code became effective on July 1, 2021 per Ordinance 126336. The General Manager/CEO of SPU established the 2021 Stormwater Facility Credit calculator ("2021 SFC Calculator"), effective January 1, 2022, that reflected the updated performance goals of the City's Stormwater Code, as established per Ordinance 126336. As further discussed in the Rule, one input to the credit calculation is a Rate Tier Multiplier which varies by rate tier. Ordinance 127072 establishes new drainage rate tiers, effective January 1, 2025, this rule updates the 2021 SFC Calculator to include revised Rate Tier Multipliers based on the drainage rate tiers approved under Ordinance 127072. The updated 2021 SFC Calculator will continue to apply to facilities built according to 2021 code requirements.

The General Manager/CEO has also maintained the three preceding calculators which reflect the performance goals of the prior City Stormwater Codes. The 2016 SFC Calculator ("2016 SFC Calculator") applies to facilities constructed according to 2016 code requirements. The 2009 SFC Calculator ("2009 SFC Calculator") applies to facilities constructed according to 2009 code requirements. The 2000 SFC Calculator ("2000 SFC Calculator") applies to facilities constructed according to 2000 code requirements. This Rule also adjusts the Rate Tier Multipliers for each of these calculators to be consistent with the rate tiers established in Ordinance 127072.

C. RULE

SPU has developed a "credit calculator" that is the formula used to calculate the percentage credit for each eligible parcel that has applied for such a credit on its drainage bill. The output of the credit calculator is a percentage credit, which may not exceed a maximum percentage, as specified in SMC 21.33.040. Credits are rounded to the nearest whole percentage, with no credit offered to calculated credits that round to less than 1 percent. The credit is then applied as a percentage discount to the customer's annual drainage bill for the parcel.

This credit calculator assigns a uniform percentage credit for each type of approved stormwater management facility, based on a weighting of the stormwater performance goals the facility satisfies and that are applicable to the appropriate drainage discharge point for that parcel. The credit calculator then considers information specific to the parcel, which is entered into the calculator by SPU, such as the percentage of the parcel's hard surface managed by the approved facility and the parcel's drainage rate category assignment. The 2021, 2016, 2009 and 2000 SFC Calculators include "Rate Tier Multipliers" which reflect the percentage of the drainage bill associated with runoff from hard surface, with such multipliers used in the calculation of the final stormwater facility credit applied to a parcel's drainage bill. The Rate Tier Multipliers vary by rate tier.

A list of all facilities that qualify as "approved stormwater management facilities" under this program is found in Table 1 (2000 SFC Calculator), Table 2 (2009 SFC Calculator), Table 3 (2016 SFC Calculator), Table 4 (2021 SFC Calculator) of Attachment A to this Director's Rule. These attachments also show the revised Rate Tier Multipliers.

Total Adjusted Facility Credit										7.4%	

Final Parcel Credit Calculation	
Total Facility Credit	7%
Drainage Rate Tier Multiplier (see note 5)	0%
Final Parcel Credit (see note 6)	0%

- Notes:
- 1) For the water quality standard, enter PGHS treated as a percent of the total hard surface area, For the flow control standard(s), enter hard surface area managed as a percent of the total hard surface area.
- 2) The "Weighted Performance Factor" is the weighted average of the performance factors for a given facility and performance standard, "Weighting Factors" assign greater or lesser weight to each performance factor relative to the environmental priorities for the type of basin in which the project is located.
- 3) The "Facility Credit" is the "Weighted Performance Factor" multiplied by the Facility Credit Scaling Factor of 50%.
- 4) The "Adjusted Facility Credit" is the "Facility Credit" multiplied by the "% Hard Surface Managed" by the facility.
- 5) The "Drainage Rate Tier Multiplier" is the percentage of the customer's bill attributable to hard surface area runoff, Credit is only offered for runoff managed which originates on hard surface.
- 6) The "Final Parcel Credit" is the "Drainage Rate Tier Multiplier" multiplied by the sum of a property's "Adjusted Facility Credits" (i.e., the "Total Adjusted Facility Credit").
The final parcel credit is capped at 50%. The "Final Parcel Credit" is the credit percentage applied to the customer bill. In compliance with RCW 35.67.020, the Final Parcel Credit for rainwater harvesting systems will be the greater of 10% or the calculated Final Parcel Credit. The system must otherwise meet all performance requirements for the applicable stormwater code.
- 7) Fractional credits are not offered - no credit will be offered for credits that are calculated to round to less than 1%.
- 8) Applicable standards will depend on project type, size, and drainage basin (see Volume 1, Chapters 4 and 5).
- 9) TSS is used as an indicator of water quality treatment; Volume is used as an indicator of volume reduction via infiltration or reuse.
- 10) If multiple flow control standards apply to a project, the largest applicable credit is applied (e.g., if an area is mitigated for FC#1, FC#4 and FC#5, enter the % hard surface managed under the flow control standard that provides the highest credit for the facility used).
- 11) If both flow control and water quality standards apply to a project, credit will be given for both (e.g., if an area meets both treatment and flow control standards, enter the % hard surface managed under both the water quality and flow control standards - the resulting "% Hard Surface Managed" may exceed 100%).
- 12) Landscape Management Plan areas do not receive Water Quality treatment credit because no stormwater facility is installed.
- 13) Sidewalk/Trail Compost-Amended Strip does not receive On-site Stormwater Management credit because it is not a facility and is equivalent to soil amendment required for all projects.

2016 Stormwater Facility Credit Program (SFCP) Credit Calculator: For Facilities Built According to 2016 Seattle Code Requirements

Version: 11-10-16; Revised 1/1/2025

Final Parcel Credit Calculation	
Total Facility Credit	0%
Rate Tier Multiplier (see note 5)	0%
Final Parcel Credit (see note 6)	0%

- Notes:
- 1) For the water quality standard, enter PGHS treated as a percent of the total hard surface area. For the flow control standard(s), enter hard surface area managed as a percent of the total hard surface area.
- 2) The "Weighted Performance Factor" is the weighted average of the performance factors for a given facility and performance standard. "Weighting Factors" assign greater or lesser weight to each performance factor relative to the environmental priorities for the type of basin in which the project is located.
- 3) The "Facility Credit" is the "Weighted Performance Factor" multiplied by 50%.
- 4) The "Adjusted Facility Credit" is the "Facility Credit" multiplied by the "% Hard Surface Managed" by the facility.
- 5) The "Drainage Rate Tier Multiplier" is the percentage of the customer's bill attributable to hard surface area runoff. Credit is only offered for runoff managed which originates on hard surface.
- 6) The "Final Parcel Credit" is the "Drainage Rate Tier Multiplier" multiplied by the sum of a property's "Adjusted Facility Credits" (i.e., the "Total Adjusted Facility Credit"). The final parcel credit is capped at 50%. The "Final Parcel Credit" is the credit percentage applied to the customer bill. In compliance with RCW 35.67.020, the Final Parcel Credit for rainwater harvesting systems will be the greater of 10% or the calculated Final Parcel Credit. The system must otherwise meet all performance requirements for the applicable stormwater code.
- 7) Fractional credits are not offered - no credit will be offered for credits that are calculated to round to less than 1%.
- 8) Applicable standards will depend on project type, size, and drainage basin (see Volume I, Chapter 4 and 5).
- 9) TSS is used as an indicator of water quality treatment; Volume is used as an indicator of volume reduction via infiltration or reuse.
- 10) If multiple flow control standards apply to a project, the largest applicable credit is applied (e.g., if an area is mitigated for FC#1, FC#4 and FC#5, enter the % hard surface managed under the flow control standard that provides the highest credit for the facility used).
- 11) If both flow control and water quality standards apply to a project, credit will be given for both (e.g., if an area meets both treatment and flow control standards, enter the % hard surface managed under both the water quality and flow control standards- the resulting "% Hard Surface Managed" may exceed 100%).

2009 Stormwater Facility Credit Program (SFCP) Credit Calculator: For Facilities Built According to 2009 Seattle Code Requirements

Version: 10-24-16; Revised 1/1/2025

Final Parcel Credit Calculation

Total Adjusted Facility Credit0%

Rate Tier Multiplier (3)#N/A

Final Parcel Credit (4)#N/A

Notes:

1) The facility credit is the scaled weighted average of the percent reductions by performance target.

2) The adjusted facility credit is the facility credit multiplied by the percentage of total impervious area managed by the applicable facility.

3) The rate tier multiplier is the percentage of the customer's bill attributable to impervious area runoff. Credit is only offered for runoff managed which originates on impervious surface.

4) The final parcel credit is the rate tier multiplier multiplied by the sum of a property's adjusted facility credits (i.e., the "total adjusted facility credit"). The final parcel credit is capped at 50%. The final parcel credit is the credit percentage applied to the customer bill.

5) For the water quality treatment PGIS/impervious area, enter PGIS as a percent of the total impervious area.

6) Where flow control is provided, it is estimated that 75% of the total impervious surface is managed. This is based upon past business inspections.

7) Fractional credits are not offered - note that no credit will be offered for credits that are calculated to round to less than 1%.

8) FC1 applies to all parcels. Possible basin combinations include:

WQ onlyWQ and FC3FC3 and FC5

FC1 onlyWQ and FC4FC4 and FC5

FC3 onlyWQ and FC5

FC4 onlyWQ and FC3 and FC5

FC5 onlyWQ and FC4 and FC5

9) Flow Control 2 (FC2) - Wetland Protection requirements may also apply. A separate credit will be calculated outside of this calculator if necessary.

10) A separate credit will be calculated for infiltration basins (or other traditional stormwater infrastructure) outside of this calculator if necessary.

11) Applicable standards will depend on project type, size, and drainage basin (see Vol III, Section 2.5.3)

12) TSS is used as an indicator of water quality treatment; Volume is used as an indicator of volume reduction via infiltration or reuse.

Drainage Rate Category	% Impervious or Parcel Area	Drainage Rate Tier	Drainage Rate Tier Multiplier (see note 5)
General Service/Large Residential	Undeveloped	0-10%	G121%
	Very Light	11-20%	G249%
	Light	21-35%	G369%
	Moderate	36-50%	G482%
	Heavy	51-64%	G589%
	Very Heavy	65-84%	G695%
	Impervious	85-100%	G799%
Small Residential	Under 2,000 sq ft	R1	95%
	2,000-3,499 sq ft	R2	89%
	3,500-4,499 sq ft	R3	87%
	4,500-5,499 sq ft	R4	85%
	5,500-6,499 sq ft	R5	83%
	6,500-9,999 sq ft	R6	80%

Color Key:

20%

Ranges for customer/applicant data entry regarding Rate Tier and % impervious or PGIS area managed.

65%

Maximum goal-based credit percentage for impervious area served by each BMP Classification.

10%

Credit contributions by BMP Classification, for applying facility's BMPs of impervious area.

Mult

Lookup Table to convert impervious area impacts of facility to composite Rate Credit Percentage.

15.0%

Rate Credit percentage that will appear on and modify bills, reflecting applicant facilities, their sizes and the Rate Tier of the applying parcel.
