

SOUTH LAKE UNION AFFORDABLE HOUSING BONUS PROGRAM REVIEW

Seattle, WA

March 12, 2013

Introduction

In late December of 2012, Spectrum Development Solutions (Spectrum) was engaged by Community Attributes (CAI) to support the analysis of the South Lake Union Affordable Housing Bonus Program as contracted by The City of Seattle Legislative Department. CAI's scope of work addressed the macro workforce housing policy context characterization and projected future demand for workforce housing in South Lake Union while Spectrum's scope of work focused primarily on an Affordable Housing Variable Analysis. Spectrum's methodology consisted of using both existing internal market information as well as external market research data to create conceptual development scenarios for the analysis. The analysis is predicated on current market data garnered through resources such as:

- Dupre & Scott
- Loop Net
- Hendricks and Partners
- CBRE
- Gardner Economics
- O'Connor Consulting Group Apartment Market Forecast
- Apartment Insights
- Downtown Seattle Association Development Guide
- Personal communications with a variety of real estate professionals ranging from property managers to developers and general contractors active in both South Lake Union as well as the greater Seattle area.

Many of the individuals who provided either quantitative or qualitative information supporting the analysis opted to keep their identities confidential due to the potential sensitivity around the results of the study relative to their roles professionally in the real estate industry. We are very grateful to all of the individuals and entities who took the time to help support the analysis.

The primary intent of Spectrum's scope of work under this assignment is to provide an objective analysis of the SLU Affordable Housing Bonus Program absent of making any specific recommendations to alter or modify the current incentive zoning program as it exists today. Any data derived from the analysis performed by Spectrum is for the use of The City of Seattle as it sees appropriate.

Background

On December 15, 2008 the Seattle City Council passed a new land use & zoning ordinance (#122882) establishing a framework to provide developers with incentives to help facilitate the creation of workforce housing in support of the City's long term Comprehensive Plan. The current Incentive Zoning program allows for additional development capacity if the applicant either 1. provides affordable housing or 2. makes a payment in lieu under the following summary of terms:

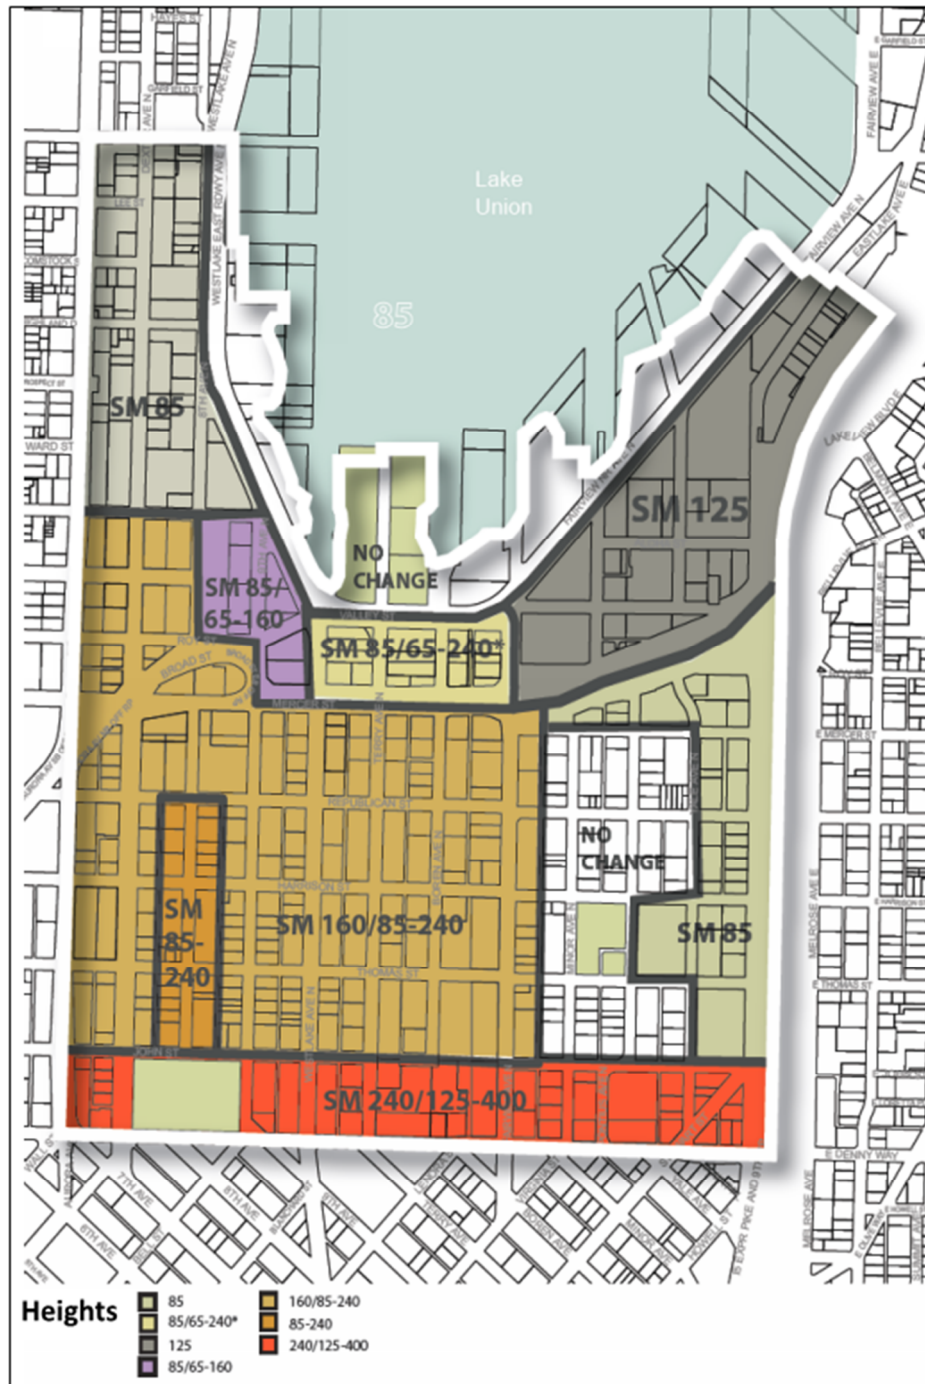

1. Bonus (Performance) Option:

- a) Provide affordable housing with a floor area equal to the greater of
 - 17.5% of 60% of the net extra residential floor area of all stories above a base (for a 240' tower in South Lake Union this would be approximately 5% of all residential floor area)
- b) Affordable unit shall serve moderate-income households for a minimum of 50 years.
 - Households with incomes no higher than 80% of median
 - Housing costs shall not exceed 30% of applicable income limit for the unit (including rent and basic utilities) for a minimum of 50 years.

2. Payment in Lieu Option:

- a. Applicant may pay to the City \$18.94/net square foot (NSF) in stories wholly or in part above the base height limit. The NSF is computed by multiplying gross residential floor area by an efficiency factor of 80%.
- b. Cash payments shall be made prior to, and as a condition to issuance, of any building permit after the first permit for a project, and before any permit for any construction activity other than excavation/shoring is issued.
- c. If an Applicant elects to defer payment, the issuance of any CO for the project will be conditioned up payment of full amount of cash payment plus an interest factor equal to amount multiplied by the increase in the Consumer Price Index, All Urban Consumers, West Region, as published monthly from last month prior to date when payment would have been required.

The current Incentive Zoning policy is under review by the City of Seattle as it relates to the proposed rezone of the South Lake Union neighborhood and beyond. The 340 acre neighborhood is primarily zoned Seattle Mixed (SM) which allows a mix of both commercial and residential uses for buildings ranging from 40' to 125'. The proposed rezone would increase the height limits up to 400' in areas per the parcel map below with only one tower being allowed per block (first number refers to maximum commercial height/second number refers to base and maximum residential height)¹:

¹ Source: Seattle Department of Planning & Development. *Director's Report – Zoning Changes for the South Lake Union Urban Center*. January 18th, 2013.

Approach & Methodology

Spectrum's approach to the scope of work consisted of developing pro forma models for two primary hypothetical developments:

i. 85' Mixed Use Midrise Development: The most cost effective and prevalent approach for this development type consists of 5 Levels of Type V wood frame construction over a podium with 2 Levels of a Type I concrete construction. A Floor Area Ratio (FAR) of 4.75 was assumed for this development type per the current zoning code. The FAR is used to calculate the maximum allowable gross square footage by multiplying the size of the site times the FAR (XX,XXX SF x 4.75 = gross allowable square footage). For the purposes of this analysis we assumed a 21,000 square foot site which yields a maximum allowable building envelope size of 99,750 gross square feet. This site size was selected as a fairly standard half acre development site size that is both large enough and efficient in supporting the floor plates. Any below grade square footage for garage or ancillary use areas does not count against the maximum allowable FAR. A typical massing study of this development type is below illustrating the 25' tall concrete podium and 5 levels of wood frame above:

ii. 240' Mixed Use Highrise Development: This development type utilizes Type I concrete and steel construction for both the podium and the tower. This change in construction type coupled with highrise mechanical and code requirements increase the construction costs substantially from a typical midrise development. For the purposes of the model we used the same size site, 21,000 square feet, and an FAR of 11.0 which results in a maximum allowable gross square footage of 231,000. There are a few key differences in the code provisions for this development type as the floors below the podium cannot exceed 75% of the lot area. As such, the floors within the podium are typically used for commercial purposes which have a greater floor to floor height than a residential floor. A minimum floor to floor height of 15 feet would allow 3 floors below a 45 foot high podium. Additionally, Section 23.48.013 (A) of the proposed zoning code limits the average gross floor area of the tower above the podium to 50% of the lot area or 12,500 square feet whichever is less. In this case, with a 21,000 square foot site, the floors in the tower above the podium would be limited to 10,500 square feet per floor. A typical massing study of this development type is below illustrating a 45' tall podium and a 19 story residential tower above:

The methodology for creating the pro forma models for the conceptual midrise (85') and high rise (240') developments consisted of analyzing the following elements:

- Zoning
- Parking requirements
- Parcel size
- Other parameters that affect feasibility
- Development program for optimal scenario(s)
- Projected hard costs (construction)
- Projected soft costs (permits, design fees, financing fees, taxes)
- Projected residential, commercial, and ancillary income
- Projected sources, uses, net operating income, operating expenses, & financial returns
- Key financial metrics, including Return on Equity (ROE), residual land value, and capitalization rates used to derive the projected market value of a project

The underwriting assumptions used to create the models are intended to reflect the current financial, construction, and rental market in Seattle and South Lake Union. The models reflect a stabilized project with permanent financing in place. The use of Internal Rate of Return (IRR) as a metric for gauging the financial return of a conceptual project relies on an income stream over a designated period of time. As such, projected IRR's can vary greatly from project to project depending on assumptions for year of sale and assumed capitalization (cap) rate at time of sale. Instead, the stabilized models reflect the projected stabilized Return on Equity (ROE) in year one and assign a cap rate based on the current Net Operating Income (NOI) to derive an estimated market value. Detailed proformas reflecting 10 year operating NOI and IRR were also developed to support the conceptual models and check all financial return assumptions.

The pro forma models were then used for the following analyses:

- II. Demonstrate economic feasibility of a midrise and highrise project;
- III. Model and analyze feasibility parameters based on current rental market data (rents, vacancy rates, operating expenses) and current development information (unit sizes, land costs, construction costs, development costs, stabilized financing parameters, capitalization rates, etc.);
- IV. Conduct sensitivity analysis that demonstrates impact on development feasibility of varying the percentage of affordable housing requirements.

A variety of sources, as identified in Appendix A – Technical Memorandum, were used to derive both current cost and revenue assumptions as well as other salient underwriting assumptions. Spectrum also reviewed Housing Analysis Affordability reports from Seifel Consulting Inc. in San Francisco developed at the request of the City of San Francisco. Both Spectrum and Seifel utilized similar methodologies to calculate the project values and affordability comparisons.

Analysis & Results

The analysis utilizes a conceptual baseline midrise project (85') and a conceptual highrise project (240') in South Lake Union, both on a 21,000 square foot site, to identify the potential change in residual land value and net project value derived from a bonus height increase by participating in the Incentive Zoning program either through performance or payment in lieu. The fundamental question targeted by the analysis is as follows:

How many housing units can be created that are affordable to moderate income workers while providing real estate developers with a reasonable return on their investment?

The conceptual models created allow for a sensitivity analysis of the affordability included in a 240' highrise project relative to a blended pay in lieu fee of \$18.85 per NSF (60% at \$18.94/NSF for Affordable Housing & 40% at \$18.75/NSF for TDR²). All of the underwriting assumptions used to create the conceptual models can be found in Appendix A – Technical Memorandum of the report.

The baseline midrise project program was set up as follows:

| Project Program | | Mid Rise Apartment - 85' |
|--|----|--------------------------|
| Site (SF): | | 21,000 |
| Zoning: | | SM 85 |
| Height Limit: | | 85 |
| Allowable FAR: | | 4.75 |
| Gross SF | | 94,950 |
| Total Units: | | 105 |
| Land Value: | \$ | 5,250,000 |
| Total Estimated Development Cost: | \$ | 29,052,000 |
| Total Estimated Project Value (5.5% CAP Rate): | \$ | 32,905,000 |
| Stabilized Return on Equity (ROE): | | 5.6% |
| Residual Land Value Increase: | | 0 |
| Net Project Value Increase | \$ | 3,853,000 |
| Total Project Value Increase (\$): | \$ | 3,853,000 |

The midrise conceptual model assumes a developer builds to the base 85' height with no affordability included in the project. The project value increase (\$3.85 million) reflects the difference between the total development cost and the stabilized value at a 5.5% cap rate of the project upon completion, occupancy, and procurement of permanent financing.

² TDR is an acronym for Transfer of Development Rights. TDR is intended to help preserve rural land and resources by targeting development growth away from rural land into designated urban growth areas through the transfer of development rights.

The baseline highrise (240') model utilizes the same approach as the midrise model but with appropriate adjustments in the underwriting assumptions given the change to highrise. The summary table below assumes a 240' highrise development where the developer opts to participate in the Incentive Zoning program through payment in lieu versus performance:

| Project Program | | High Rise Apartment - 240' | |
|--|--|--------------------------------|-------------|
| Site (SF): | | 21,000 | |
| Zoning: | | SM 240 | |
| Height Limit: | | 240 | |
| Allowable FAR: | | 11 | |
| Gross SF | | 226,965 | |
| Total Units: | | 225 | |
| Affordability Sensitivity Summary | | Pay in Lieu - No Affordability | |
| Number of affordable units: | | 0 | |
| Land Value: | | \$ | 10,141,463 |
| Total Estimated Development Cost: | | \$ | 80,285,000 |
| Total Estimated Project Value (5.5% CAP Rate): | | \$ | 101,716,000 |
| Stabilized Return on Equity (ROE): | | 9.1% | |
| Residual Land Value Increase: | | \$ | 4,891,463 |
| Net Project Value Increase | | \$ | 21,431,000 |
| Total Project Value Increase (\$): | | \$ | 26,322,463 |
| Incentive Zoning Program Analysis | | Total | Per NSF |
| Pay in Lieu Fee (\$18.85/NSF Bonus Height): | | \$ (1,990,786) | \$ (18.85) |
| Pay in Lieu Fee Equal to Impact of Affordability: | | \$ 1,990,786 | \$ 19 |
| Pay in Lieu Fee TDR portion (40% at \$18.75) | | \$ 792,090 | \$ 18.75 |
| Pay in Lieu Fee Affordable Housing (60% at \$18.94) | | \$ 1,198,696 | \$ 18.94 |

The stabilized ROE of 9.1% reflects the cash-on-cash return upon full 95% residential occupancy and a 63% loan to value ratio assuming a 5.5% cap rate. The Total Project Value Increase of \$26.3 million is 13 times greater than the current pay in lieu fee of \$1.99 million. Our sensitivity analysis explored the potential impact of performance options ranging from the inclusion of 5% -20% of the apartments at 80% of Area Median Income (AMI). An ROE of 6% is used as the baseline threshold return to reflect the typical minimum return yield requirement upon stabilization accepted by developers & investors in the current market (6% - 10% target range). The graph below reflects the ROE impact of increasing the affordability within the project:

The Affordability Sensitivity Summary table below reflects both the residual land value increase by increasing the height from 85' to 240' as well as the net project value increase (estimated market value of project less total estimate development cost). The Total Project Value Increase number is a summation of both the residual land value and net project value increase. The Pay in Lieu Fee Equal to Impact of Affordability reflects the difference in value between a 240' project with no workforce affordable apartments and a project with workforce affordable apartments. For example, Scenario 4 (20% of the units at 80% of AMI) calculates that the impact on value per net square foot of bonus area is approximately \$85 per net square foot which is roughly 4 times greater than the current pay in lieu fee.

| | High Rise Apartment - 240' | | | | | | | | | |

| | | | | | | | | | | |
| Residual Land Value Increase: | \$ | 4,891,463 | \$ | 4,891,463 | \$ | 4,891,463 | \$ | 4,891,463 | \$ | 4,891,463 |
| Net Project Value Increase | \$ | 21,431,000 | \$ | 21,167,000 | \$ | 18,912,000 | \$ | 16,657,000 | \$ | 14,402,000 |
| Total Project Value Increase (\$): | \$ | 26,322,463 | \$ | 26,058,463 | \$ | 23,803,463 | \$ | 21,548,463 | \$ | 19,293,463 |
| Incentive Zoning Program Analysis | Total | Per NSF | Total | Per NSF | Total | Per NSF | Total | Per NSF | Total | Per NSF |
| Pay in Lieu Fee (\$18.85/NSF Bonus Height): | \$ (1,990,786) | \$ (18.85) | | | | | | | | |
| Pay in Lieu Fee Equal to Impact of Affordability: | \$ 1,990,786 | \$ 19 | \$ 2,256,000 | \$ 21 | \$ 4,511,000 | \$ 43 | \$ 6,766,000 | \$ 64 | \$ 9,021,000 | \$ 85 |
| Pay in Lieu Fee TDR portion (40% at \$18.75) | \$ 792,090 | \$ 18.75 | \$ 792,090 | \$ 18.75 | \$ 792,090 | \$ 18.75 | \$ 792,090 | \$ 18.75 | \$ 792,090 | \$ 18.75 |
| Pay in Lieu Fee Afford. Housing (60% @ \$18.94) | \$ 1,198,696 | \$ 18.94 | \$ 1,463,910 | \$ 23.10 | \$ 3,718,910 | \$ 58.69 | \$ 5,973,910 | \$ 94.27 | \$ 8,228,910 | \$ 129.86 |

The results of the above table suggest that, in answering the original question posed for the analysis, there is room to either increase the pay in lieu fee to more closely capture the value created by increasing the height from 85' to 240' or make program changes to better incentivize the inclusion of workforce affordable housing units within the project while still providing developers with a reasonable rate of return on their investment. While this report does not make any specific recommendations, if the goal of the City is to incentivize performance under Incentive Zoning to create mixed-income communities then, from a policy standpoint, the pay in lieu fee should be set higher than the Impact of Affordability of the targeted percentage of affordability to induce performance.

Appendix A - Technical Memorandum

The following information is intended to provide further market context and source detail for information gathered during the study used to inform the conceptual models.

Land Costs: A per unit land value of \$50,000 per unit/\$250 per square foot for the 85' midrise scenario and \$45,000 per unit/\$483 per square foot for the highrise scenario were used based on qualitative conversations with developers and brokers as well as recent land sale transactions in and around the South Lake Union neighborhood. The table below provides a sample of recent land comps (Sources: Loop Net and Hendricks & Partners):

| Location | Date Sold | Est. Units | Land Size (sf) | Zoning | Present Use | Sale Price | \$/Unit | \$/SF Land |
|---|----------------|------------|----------------|-----------------|------------------------|--------------|----------|------------|
| Cascade Multifamily Site* 205 - 239 Minor Ave N Seattle | Under Contract | 250 | 43,200 | SM/R 55/75 | Commercial Space | \$12,500,000 | \$50,000 | \$289.35 |

| 2521 Western Ave** Seattle | 1/31/2013 | | 14,400 | DMR/C 125/65 | Vacant | \$3,600,000 | | \$250.00 |

Construction & Development Costs: These costs were derived from internal construction market data on 85' midrise projects as well as through auditing of both recently completed and under-construction high rise projects. Since Spectrum is close to a number of current midrise projects, and therefore has very good cost input, we bolstered our research efforts on the highrise apartment product type to ensure an accurate representation of the market. While it is often challenging for both contractors and developers to publicly divulge their actual costs due to sensitivities with their clients, investors, partners, lenders, and others, we are both thankful and appreciative to the many who took the time to provide us with detail and information to better inform the study. A summary table of our market survey for current high rise construction and development costs is below:

| SEATTLE HIGH RISE CONSTRUCTION & DEVELOPMENT COST MARKET SURVEY | | | | | | | | | | | | |
|---|----------------------|--|------------|-----------------------|-----------------|---------------------|-------------------------------|----------------------|---------------------------|---------|----------------------------|------------|

| 7 | Vulcan | DID NOT RESPOND TO REQUEST FOR INFORMATION | | | | | | | | | | |
| 8 | Touchstone | DID NOT RESPOND TO REQUEST FOR INFORMATION | | | | | | | | | | |
| 9 | Skanska | DID NOT RESPOND TO REQUEST FOR INFORMATION | | | | | | | | | | |
| 10 | Alliance Residential | DID NOT RESPOND TO REQUEST FOR INFORMATION | | | | | | | | | | |
| 11 | Avalon Bay | DID NOT RESPOND TO REQUEST FOR INFORMATION | | | | | | | | | | |
| * Low cost of delivery due to timing of construction pricing & no HVAC system. Per Harbor Urban, construction cost would likely be approx. \$5 million higher today (\$30 MM/\$170 Per GSF) | | | | | | | | | | | | |
| **Total Construction Cost excludes: WA State Sales Tax, Contingency, extraordinary site development costs such as, demolition, environmental cleanup, offsite improvements, special foundations such as piling or over excavation. | | | | | | | | | | | | |
| *** Total Development Cost includes: Total Construction Cost, sales tax, contingency, Land, site development costs, soft costs such as design fees, permit fees, insurance, utility hookup fees, impact fees and project management fees. Total Development Cost excludes: Cost of capital, financing costs, guarantee fees, preferred return, operating reserves, capital repair reserves. | | | | | | | | | | | | |

To help account for both potential inflation in the current construction market as well as other pricing factors we have assumed a construction cost of \$175 per gross square foot and a total development cost of \$347,404 per unit assuming no pay in lieu fee (\$78.3 million total development cost). It is important to note that the hard costs (construction) and soft costs (permits, utilities, A/E fees, financing costs, etc.) can vary on each project pending on a variety of factors: timing, lending environment & financing costs, target market, construction environment, design, finishes, etc. Our conceptual models do not assume significant demolition, environmental remediation, extraordinary foundation requirements, or offsite improvements as these factors are project specific.

It should be noted that following Spectrum's presentation to City Council on February 25th, Heartland sent both Spectrum and Councilmember Conlin follow-up e-mails correcting their analysis of Spectrum's assumed construction cost per gross square foot used in the models. After further comparison and review, Heartland's construction cost assumptions are now very close to those of Spectrum's used in developing the models for this report.

Market Rate Residential Rents: A number of recently built midrise and highrise apartment projects in and around the South Lake Union neighborhood were surveyed to provide an accurate sampling of the rental market. The properties selected for the market survey were chosen based on the following selection criteria:

- Location
- Quality of Project & Target Market Relative to South Lake Union
- Year of Construction Completion

The summary tables for the midrise rental market survey are as follows:

| Midrise Apartment Market Rent Survey Summary | | | | |
|--|----------|---------------|---------------|---------------|
| | STUDIO | 1 BDRM/1 BATH | 2 BDRM/1 BATH | 2 BDRM/2 BATH |
| Average Unit Size | 545 | 774 | 1,010 | 1,134 |
| Average Rent/SF | \$ 2.67 | \$ 2.56 | \$ 2.38 | \$ 2.23 |
| Average Rent | \$ 1,397 | \$ 1,961 | \$ 2,337 | \$ 2,551 |

| Baseline Midrise (85') Model Rental Assumptions | | | | |
|---|----------|---------------|---------------|---------------|
| | STUDIO | 1 BDRM/1 BATH | 2 BDRM/1 BATH | 2 BDRM/2 BATH |
| Average Unit Size | 500 | 650 | N/A | 1,000 |
| Average Rent/SF | \$ 2.55 | \$ 2.85 | N/A | \$ 2.35 |
| Average Rent | \$ 1,275 | \$ 1,853 | N/A | \$ 2,350 |

The properties identified in the midrise rental market survey are below:

| MIDRISE APARTMENTS | | | | | | | | | | | | | | | |
|--------------------|---------|----|---------|----------|----|---------|---------|----|--------|-------------------|----|---------|------------|----|---------|

| ** All surveyed projects were built in 2001 or newer | | | | | | | | | | | | | | | |

Workforce Residential Rents: The workforce level rents used in the model are sourced from the City of Seattle Office of Housing 2013 Multifamily Rent Limits per the table below:

| 2013 Multifamily Property Tax Exemption Program Income Limits | | | | | | | | | |
|--|----------|----------|----------|----------|----------|----------|----------|----------|-----------|
| Family Size | 60% | 65% | 70% | 75% | 80% | 85% | 90% | 100% | 120% |
| 1 Person | \$36,420 | \$39,455 | \$42,490 | \$45,525 | \$48,560 | \$51,595 | \$54,630 | \$60,700 | \$72,840 |
| 2 Persons | \$41,640 | \$45,110 | \$48,580 | \$52,050 | \$55,520 | \$58,990 | \$62,460 | \$69,400 | \$83,280 |
| 3 Persons | \$46,860 | \$50,765 | \$54,670 | \$58,575 | \$62,480 | \$66,385 | \$70,290 | \$78,100 | \$93,720 |
| 4 Persons | \$52,020 | \$56,355 | \$60,690 | \$65,025 | \$69,360 | \$73,695 | \$78,030 | \$86,700 | \$104,040 |
| 5 Persons | \$56,220 | \$60,905 | \$65,590 | \$70,275 | \$74,960 | \$79,645 | \$84,330 | \$93,700 | \$112,440 |
| 2013 Multifamily Property Tax Exemption Program Maximum Rent Limits | | | | | | | | | |
| Unit Size | 60% | 65% | 70% | 75% | 80% | 85% | 90% | | |
| Studio | \$910 | \$986 | \$1,062 | \$1,138 | \$1,214 | \$1,289 | \$1,365 | | |
| 1 Bedroom | \$1,041 | \$1,127 | \$1,214 | \$1,301 | \$1,388 | \$1,474 | \$1,561 | | |
| 2+ Bedroom | \$1,171 | \$1,269 | \$1,366 | \$1,464 | \$1,562 | \$1,659 | \$1,757 | | |
| The amounts shown in the above table assume that the costs of basic utilities are included in the rent. If the tenant pays basic utilities, this amount needs to be subtracted from the numbers above which we've done on the model rents. | | | | | | | | | |
| Effective 1/1/2013 | | | | | | | | | |

Vacancy Rate: Current vacancy rates for well-located rental properties in and around the South Lake Union neighborhood remain below 5%. The majority of the stabilized midrise and highrise apartment projects surveyed all had vacancy rates at 3% or lower. Dupre and Scott's Apartment Advisor Report from December 2012 (Vol. 35 No.6) notes that the region's vacancy rate was 4.8%. The 4th Quarter 2012 Apartment Insights Report for Metropolitan Seattle also notes that the lowest vacancy rates in King County are in Seattle where many of the prime submarket neighborhoods have vacancies under 3.5%. For our conceptual models we have assumed a 5% residential vacancy rate and a 7% commercial vacancy rate. Below is a vacancy rate projection graphic for the Seattle Apartment Market projecting sub 4% vacancy rates through 3Q 2014 (O'Connor Consulting Group Apartment Forecast - 11/6/12):

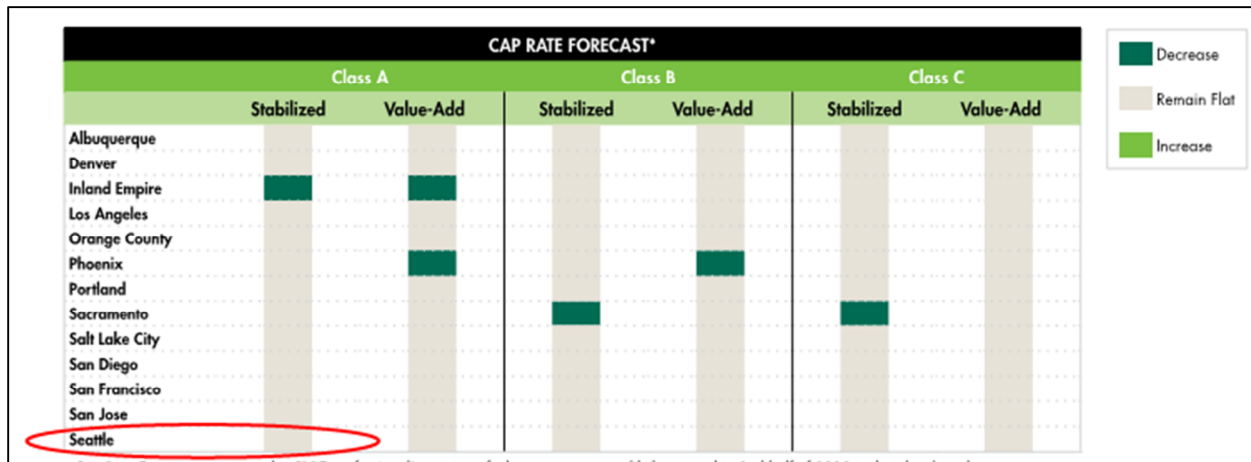

Capitalization Rates: Capitalization rates (cap rates) are used to estimate the value of an income-producing property. The range of cap rates reflects the current Seattle market as of Q4 2012/Q1 2013 for well located, stabilized, low vacancy apartment projects. According to the Dupre & Scott Apartment Advisor from December 2012 report, the average capitalization rate for King County is 5.3%. Capitalization rates fluctuate as they are heavily influenced by overall market demand for a specific product type, investor/lender appetite, and current cost of capital (interest rates). Based on our survey of developers and recent property acquisitions we assumed a capitalization rate of 5.5% for the models to derive the projected market value of a project. This assumed capitalization rate is likely conservative given the current market conditions.

The table below represents a comprehensive CBRE survey of the current cap rates for Class A and Class B apartment projects throughout the country. For Class A stabilized urban infill apartment projects in Seattle the survey identifies a cap rate range of 3.75% - 4.25% with older (10 – 25 years+) less desirable stabilized Class B urban infill apartments trading between 5.00% - 5.5%³. Any newly developed, highrise apartment project in South Lake Union would be considered a Class A asset.

³ CBRE Cap Rate Survey August 2012. Class A refers to newly developed buildings, within the last 10 years, located in desirable neighborhoods with a high quality of living.

The CBRE survey also projects the cap rates for Class A stabilized urban infill apartment projects in Seattle to remain flat (3.75% - 4.25%) throughout 2013:

Operating Expenses: According to Dupre and Scott (March 2103 Apartment Advisor Vol. 26 No. 1), operating costs for typical multifamily properties increased 5.3% to \$4,965 per unit per year excluding capital expenses and replacement reserves. Based on our market survey research and conversations with local property managers we have assumed annual operating expenses of \$6,500 per unit for the conceptual midrise development and \$7,500 per unit for the conceptual highrise development. These numbers are both higher than Dupre & Scott's findings but we feel it is important to have sufficient cushion in the model as well as account for the potentially higher level of operating costs in the South Lake Union neighborhood than in other neighborhoods in the region. Additionally, we bolstered the operating expense per unit on the highrise model to account for the higher level of management service typically expected with this development type.
